(57) **CLAIM**

The ornamental design for a display screen or portion thereof with graphical user interface for selecting text with an abstraction tool, as shown and described.

DESCRIPTION

FIG. 1 is a front view of a first image in a sequence of a display screen or portion thereof with graphical user interface for selecting text with an abstraction tool showing our new design;

FIG. 2 is a front view of a second image thereof;

FIG. 3 is a front view of a third image thereof;

FIG. 4 is a front view of a fourth image thereof;

FIG. 5 is a front view of a fifth image thereof;

FIG. 6 is a front view of a sixth image thereof;

FIG. 7 is a front view of a seventh image thereof;

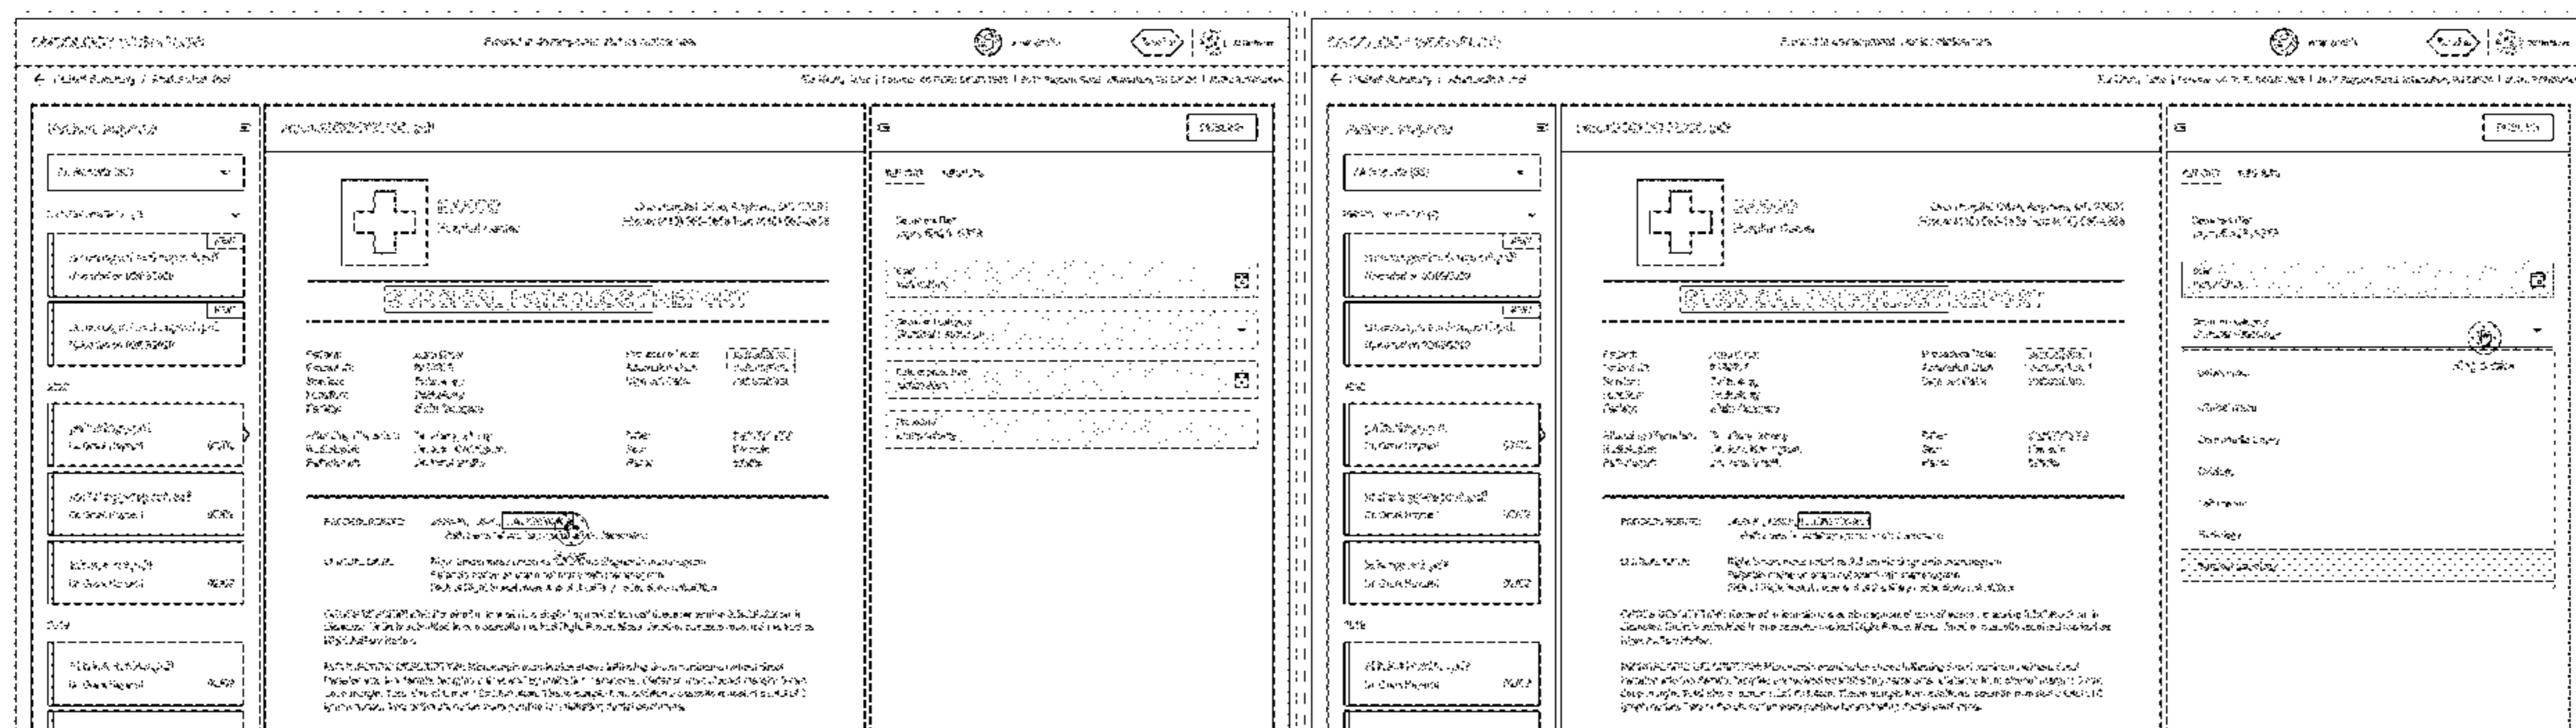

FIG. 8 is a front view of an eighth image thereof; and,

FIG. 9 is a front view of a ninth image thereof.

The outermost broken lined rectangles indicate a boundary of a display screen or a portion thereof and form no part of the claimed design. The broken lined text and characters form no part of the claimed design.

The appearance of the animated images sequentially transition from FIG. 1 to FIG. 9. The process or period in which one image transitions to another forms no part of the claimed design.

1 Claim, 9 Drawing Sheets

SURGICAL PATHOLOGY REPORT

CLINICAL DATA:

Right breast mass noted as 2.5 cm x 1.5 cm x 0.8 cm. In situ ductal carcinoma (DCIS) noted on section with micrograph. FNA of right breast mass and of 2 axillary nodes done 12/15/2022.

GROSS DESCRIPTION: Received in formalin is a single fragment of tan well circumscribed, lobulated, firm, tan, fleshy mass, 2.5 cm x 1.5 cm x 0.8 cm in diameter, firmly adherent to the capsule. Another cassette received marked as Right Axillary Node.

MICROSCOPIC DESCRIPTION: Microscopic examination shows infiltrating ductal carcinoma without ductal invasion into the dermis. Margins uninvolved by infiltrating carcinoma. Clusters from enlarged atypical, in many deep nests. Total area of tumor 1.5 x 1.5 x 0.8 cm. Tumor consists of infiltrating ductal carcinoma composed of a total of 6 lymph nodes. Two of the six nodes were positive for infiltrating ductal carcinoma.

PROCESSED: 11/20/2021
11/20/2021

CLINICAL DATA:
Right breast mass noted as 1.5 cm via diagnostic mammogram. Biopsy results on mass not found with mammogram. FNA of right breast mass and of 2 axillary nodes done 11/20/2021.

GROSS DESCRIPTION: Received in formalin a single fragment of tan soft tissue measuring 2.0x1.5x0.5 cm in diameter. Ample submitted in one cassette marked right breast mass. Another cassette received marked as right axillary nodes.

MICROSCOPIC DESCRIPTION: Microscopic examination shows infiltrating ductal carcinoma without ductal invasion into the dermis. Margins uninvolved by infiltrating carcinoma. Clusters from clustered atypical to many deep nuclei. Total area of tumor 1.5x1.5x1.5 cm. Tumor consists of infiltrating ductal carcinoma composed of total of 6 lymph nodes. Two of the six nodes were positive for infiltrating ductal carcinoma.
