(57) **CLAIM**

The ornamental design for a soft mold transfer container lid, as shown and described.

FIG. 1 is a top, front and right side perspective view of a soft mold transfer container lid in accordance with my new design;

FIG. 2 is a bottom, rear and left side perspective view thereof;

FIG. 3 is a front elevational view thereof;

FIG. 4 is a top plan view thereof;

FIG. 5 is a bottom plan view thereof;

FIG. 6 is a right side elevational view thereof;

FIG. 7 is a cross-sectional view thereof taken along line VII-VII of FIG. 4;

FIG. 8 is a cross-sectional view thereof taken along line VIII-VIII of FIG. 4;

FIG. 9 is a top, front and right side perspective view thereof in a manner of use, a soft mold is placed on a container body, and the present article before attaching to the container body;

FIG. 10 is a top, front and right side perspective view thereof in a manner of use, the soft mold being placed on the container body, the container body positioned by the chuck, for filling the soft mold with a medicine is performed, and the present article before attaching to the container body;

FIG. 11 is a cross-sectional view thereof in a manner of use, in a state where the soft mold is housed in the container body and the present article, for drying the filled medicine;

FIG. 12 is a top, front and right side perspective view thereof in a manner of use, in a state where the soft mold is housed in the container body and the present article, for drying the filled medicine;

FIG. 13 is a cross-sectional view thereof in a manner of use, in a state where the soft mold is housed in the container body, and the present article before detaching to the container body; and,

FIG. 14 is a top, front and right side perspective view thereof in a manner of use, the present article is detached from the container body, and a microneedle array is released from the soft mold.

The broken lines depict portions of the soft mold transfer case in which the design is embodied that form no part of the
