3,335 AZALEA PLANT

Thomas G. Harcharik, Salinas, Calif., and Walter W. Knicely, Barberton, and William E. Duffett, Akron, Ohio, assignors to Yoder Brothers, Inc., Barberton, 5 Ohio

Filed Aug. 25, 1971, Ser. No. 175,013 Int. Cl. A01h 5/00

U.S. Cl. Plt.—57

1 Claim

The present invention comprises a new and distinct variety of azalea pant which has resulted from a spontaneous mutation on the unpatented azalea cultivar known as Whistler.

The new variety is similar in many respects to Whistler, 15 having the same characteristics of:

(1) Semi-double flower form.

(2) Each floret unfurling slowly from the bud stage and closely resembling a minature hydride tea rose.

(3) Mid to late season response with 3-4 weeks keep- 20 ing quality in the home.

The new variety is distinguished from Whistler by its medium pink color as compared with the orchid pink color of Whistler.

Varietal worth was determined by flowering liners from 25 cuttings taken from the initial selection in both a year-

2

round and natural season developmental flowering program over a period of three years. Stock growth was evaluated in the vicinity of southern Florida.

The new variety has been asexually reproduced by cuttings at Barberton, Ohio, and has been found to retain its distinctive characteristics through successive propagations.

The new variety when grown in the vicinity of Barberton, Ohio has a response described as mid to late, and the following detailed description is based on observations made of the new variety in a greenhouse in Barberton, Ohio. The response time and blooming period may vary significantly with varying environmental condictions such as temperature, light intensity and daylength. Suggested flowering period is from mid-January through early May in a natural season program. It is not recommended in a year-round controlled program.

The accompanying drawing illustrates the new variety, with the colors being as nearly true as possible with color photographs of this type.

The following is a detailed description of the new variety. Color references are to the Munsell Color Book, 1963 edition, and comparisons made with the parent cultivar Whistler. Where only a single value or description appears for the new cultivar, the same value or description applies to the parent cultivar as well.

BOTANICAL CLASSIFICATION: Rhododendron hybrida evergreen type

	Pink Whistler	Whistler
Flower:		·
Color (Spring color in Barbe	erton,
