## United States Patent Office

Plant Pat. 3,608 Patented Sept. 3, 1974

3,608 CHRYSANTHEMUM PLANT Sing Ling Lee, 206 Sleeper Ave., Mountain View, Calif. 94040 Filed Apr. 13, 1973, Ser. No. 350,910 Int. Cl. A01h 5/00

U.S. Cl. Plt.—78

1 Claim

The present invention comprises a new and distinct cultivar of chrysanthemum plant known by the varietal 10 name Yellow Jumbo Albatross. The new cultivar is a sport of the cultivar known in the United States as Jumbo Albatross, disclosed in my issued U.S. Plant Pat. 3,249.

The new cultivar is similar in many respects to Jumbo 15 Albatross, having the same characteristics of:

- 1. A similar recommended flowering period.
- 2. The same foliage shape, size and color.
- 3. Equal vigor.
- 4. Approximate flower size.
- 5. Similar petal form, in that the petals are tubular and closed at the base and flare to a rounded deep keel which tapers to a blunt tip. Most petals have a finger-like or pointed protuberance(s) which arise on the side of the petals near the opening of the tubed base. This uni- 25 que trait of both the new cultivar and the parent Jumbo Albatross, when grown at a minimum temperature of 60° F. or above for initiation and development, has never been observed on the cultivar Albatross, and is only rarely seen on the cultivars Improved Albatross and 30 #2 Yellow Albatross. Similar tubular petals have occasionally been observed on Improved Yellow Albatross, but the protuberances which arise on the side of the

petals near the opening of the tube on Yellow Jumbo Albatross and Jumbo Albatross rarely develop on Improved Yellow Albatross at 60° F. minimum temperatures, or above.

The new cultivar is distinguished from Jumbo Albatross by its yellow flower color.

The new cultivar was discovered as a flowering plant in a greenhouse in Mt. View, Calif., and when asexually reproduced by cuttings at Mt. View, Calif., has been found to retain its distinctive characteristics through successive propagations.

The new cultivar when grown in the vicinity of Mt. View, Calif. has a response period of approximately 8 weeks, and the following detailed description is based on observations made of the new cultivar in a greenhouse in Mt. View, Calif. The response time, blooming period, color, and total vigor may vary significantly with varying environmental conditions such as temperature, day length, and light intensity. Suggested flowering in the northern and western United States is from April through May and November 1 through November 15. Suggested flowering in coastal California, is from April through November.

The accompanying photographic drawing shows the unique color characteristic of the new cultivar, the color being as nearly true as possible with color illustrations of this type.

In the description which follows, color references are made to the Munsell Color Book, 1963 edition, and color comparisons are made with the cultivar Jumbo Albatross. Where a single value or description appears only for the new cultivar, the same value or description applies to the parent cultivar as well.

Botanical classification: Chrysanthemum morifolium

Yellow Jumbo Albatross

	Yellow Jumbo Albatross	Jumbo Albatross
Bloom:		
Size	5½" 6"	
Fully expanded	6"	
Borne	Singly on disbudded plant	
Stams	Strong	
Form	Strong	
Color:	10 days	
Color:	3.5. 32	
Center of flower	Medium yellow, 7.5Y8.8/7.2	Pale yellow, 7.5Y9/4
Base of petals	Y 6HOW-9reen	Dolo wallow 7 5 Vou
Inside of Detais	Deep vellow 7.4 Y 8.7/9.6. to light vellow, 1.5(4 Y 9.1/4.0	Pala imary 5V0/1
Reverse of petals	Yellow 0.6 G Y 9.0/7.8 to ivory. $2.1 \text{ G Y 9.1/2.0}_{-}$	Pale ivory 5V0/1
Tonanty from a distance	Mediim vellow	White (irrery)
Discoloration	Light yellow, 1.5GY9.1/4.0	Pole ivory 5V0/1
		rate tvory, or 9/1.
Petals:		
Texture	Smooth	
Appearance and form	Petals tubular and closed at the base, flaring to a rounded deep keel which tapers to	
	a blunt tip. Most petals have a finger-like or pointed protuberance(s) which arise	
	on the side of the petals near the opening of the tubed base. This petal form also	
	appears on the parent Jumbo Albatross, and clearly distinguishes both the new	
	appears on the parent stands Arbanoss, and clearly distinguishes both the lifty	
	and parent cultivars from currently available selections of Yoder Brothers, Inc.,	
	Barberton, Ohio, from the Albatross group, including Albatross, #2 Yellow Al-	
	batross, Improved Albatross and Improved Yellow Albatross. The unique petal	
	form, when grown at a minimum temperature of 60° F. or above for initiation and	
	development, has never been observed on the cultivar Albatross, and is only	
	rarely seen on the cultivars Improved Albatross and #2 Yellow Albatross. Al-	
	though similar tubular petals have occasionally been observed on Improved Yel-	
·	low Albatross, the protuberances which arise on the side of the petals near the	
	opening of the tube on the new cultivar and the parent cultivar Jumbo Albatross	
·	regalized on the tube on the new curity at and the patent curity at Junious Albanoss	
	rarely develop on Improved Yellow Albatross at 60° F. minimum temperatures,	
A was a sand and	or above.	
Arrangement	Composite, whorled on a single receptacle	
Persistence	Resist shatter	
Fragrance	Typical chrysanthemum	
Reproductive organs:		
Stamen, anthers	Nama ta K	
Pollen	None	
Arrangement	Clustered in center of nower, if present	
Styles	Present both ray and disc florets	
Length	Short	
Ovaries	At the base of petal attached to receptacle	
Plant:	TTI	
Form	Herbaceous	
Growtn		
Height	Approximately 42"-44" when grown as a single stem eron, given 3-4 long day weeks	
	and a total crop time of 11–12 weeks as required in spring through fall flowering at	
	A TO THE TOTAL TO THE TOTAL TO THE WAY AND	
	Mt. View. Calif.	
Spread	Mt. View, Calif. None	

## TABLE—Continued

	Yellow Jumbo Albatross	 Jumbo Albatross
Poliage:	Dark green, 7.5 G Y 2/4	 <del></del>
Top side	53/'' long. $31/''$ wide	 
Quantity	Nimarons	 <b></b> .
Shape	Spatulate lobed	
Texture	DIHOU011	 - <i>-</i>
Ribs and veins	Prominent Moderately indented	 -÷ . ;: 
Serration	Vorst elight	 _ <del>_</del>
Under side	Green, 7.5GY4/4	 
Stipules	Prominent but small	

I claim:

No references cited.

1. A new and distinct cultivar of chrysanthemum characterized particularly as to its uniqueness when compared to the parent cultivar Jumbo Albatross by its yellow flower color.
