## [57] ABSTRACT

This invention relates to a new and distinct variety of miniature rose plant primarily identified by the unusual orange color, the petals being dark orange on outside surface and a lighter orange on inside surface.

## 1 Drawing Sheet

1

The present invention relates to a new and distinct variety of hardy, dwarf, bush type rose plant of the miniature class; the variety being primarily characterized — as to novelty — by the dark orange of the outside surface of petals and the contrasting lighter orange of inside surface and the Hybrid Tea form of buds and flowers.

The variety is further characterized by:

An abundance of bloom, with flowers usually borne singly, but also several to the stem in loose clusters.

Slight fragrance.

A plant which is vigorous, of rounded, upright shape with small semi-glossy to matt foliage with pointed leaflets; the buds and flowers being similar in form and size to Dreamglo (miniature — U.S. Plant Pat. No. 4,579).

The plant, which has a normal height of 12–14 inches or more, can easily be maintained at lesser height by occasional trimming.

A plant which grows and blooms satisfactorily both in greenhouse and outdoors; is good for growing in pots; and provides excellent garden decoration as well as cut flowers.

The present variety of miniature rose was originated 25 by me at Mini-Roses Nursery located at Dallas, Tex., under conditions of careful control and observation, as a cross between Tom Brown (Floribunda — not patented) as the seed parent and Over the Rainbow (miniature — U.S. Plant Pat. No. 3,472) as the pollen parent. 30

Subsequent to origination of the variety I successfully asexually reproduced it at Mini-Roses Nursery, located as aforesaid, by budding as well as by cuttings; the reproductions having run true in all respects.

The color photograph illustrates the variety, including the foliage, buds and flowers.

Referring now specifically to the new and distinct variety of miniature rose plant, the following is a detailed description thereof in outline; all major color plate identifications being by reference to The Royal Horticultural Society Colour Chart, except where common terms of color definition are employed.

Type: Hardy; dwarf; bushy; upright; seedling; green-45 house; outdoors; cut flowers; garden decoration; potted plant.

Class: miniature. Variety identification: Minafco (Commercial synonym: Orange love).

Flowers borne: Singly and several together (3 to 5) on slender wirey stems.

2

Quantity of bloom: Abundant both outside and in green-house.

Bud:

Peduncle.—medium to long; slender but sturdy; erect; medium green, sometimes tinted bronze (outdoors); with no prickles and few or no short hairs.

Before calyx breaks; size.—small. Form long; pointed with several foliaceous apendages on surface of bud; with foliaceous parts extending beyond the tip of the bud equal to one-half or less of its length.

Color.—medium to dark green, occasionally tinted with bronze (outdoors).

As calyx breaks, color.—orange.

Opening.—opens well in all weather.

Bloom:

Size when fully open.—small, averaging about 35 mm  $(1\frac{1}{2})$ .

Petalage.—double — averaging about 45 petals arranged regularly plus several small petaloids.

Form.—high centered with petals rolled loosely outward and downward. Open flowers usually show few stamens.

Petals: Fairly thick; satiny on inside and on outside surface.

Shape.—outside petals, broad lanceolate (nearly round), without acute tip; intermediate — broad lanceolate sometimes with acute tip; inside — lanceolate sometimes with acute tip.

Color: Newly opened flower from a plant grown outside (July 1985), Dallas, Tex.:

Red Group 42 A and near Greyed-Red Group 180 A, blending to near Greyed-Orange Group 171 A and near Orange-Red Group 34 A with near Orange-Red Group 34 B and near Orange-Red Group 34 C near base with small area of yellow at base. Inside surface — between near Orange-Red Group 35 C and near Orange-Red Group 31 C, blending to near Greyed-Orange Group 170 A and near Greyed-Orange Group 170 B, blending to near Orange Group 24 B toward base with a small area of yellow at base of petal.

Intermediate petal.—outside surface similar to outside petal. Inside surface similar to outside petal.

Inner petal.—outside surface — same as intermediate petal; inside surface — same as intermediate petal. Note: Edges of petals may become lighter

10

3

medium width; medium length narrow points which turn out usually at about 45 degrees or more.

then darker with age. Some sheen observed on petal surfaces. General color effect; buds and newly opened flowers — orange. Three days open — color orange. Behavior — opens well in all weather. Old flowers become less brilliant. 5 Spent petals drop off. Flower longevity (July 1985) — plant in pot 4–5 days or longer. Cut flowers at living room temperature 4–5 days or longer.

Reproductive organs:

Stamens.—fair amount.

Filaments.—few, varying length, medium long.

Anthers.—few, misshaped.

Pollen.—some.

Pistils.—average number.

Styles.—varying length; reddish; bunched (not well formed).

Ovaries.—all enclosed in calyx.

*Hips.*—none.

Sepals.—permanent; spear shaped; recurved.

Seed.—none.

Foliage:

Leaves.—compound of five (sometimes three or seven) leaflets; medium small; leathery; semiglossy to matt.

Leaflets.—shape: broad, nearly oval; apex acute; base rounded — sometimes acute. Color: medium green; new growth — normal (medium) green (sometimes tinted reddish). Rachis: medium strength; upper side may have several tiny 30 short hairs; grooved; underside may have several thorns (1-3). Stipules: medium to long length;

Growth:

Habit.—dwarf; bushy; upright; much branched.

Growth.—free; vigorous; internodes short.

Canes.—medium; slender; sturdy.

Main stems.—color: medium green.

Thorns.—average. Prickles — none. Hairs — none. Branches.—color: medium green. Thorns: average;

slender; prickles: none. Hairs — none.

The miniature rose plant and its flowers as herein described may vary in slight detail due to climatic, soil and cultural conditions under which the variety may be grown; the present description being of the variety as grown at Dallas, Tex.

The following is claimed:

1. A new and distinct variety of miniature rose plant of hardy, dwarf, bushy, upright, much branched habit, substantially as illustrated and described, characterized by buds and flowers of exhibition form, essentially orange in color, the petals on outside surface being darker orange than the orange on inside surface, and further characterized by a plant of compact well rounded shape; vigorous, with the main stems and shoots being of average thorniness, the said plant being easy to propagate from cuttings or by budding, with an abundance of small semi-glossy to matt foliage and an abundance of flowers borne singly or several to the stem in loose clusters.
