(57) **ABSTRACT**

A new and distinct angelonia plant with white colored flowers above medium green foliage. The plant is suitable for pot planting or as a bedding plant.

**1 Drawing Sheet**

**1**

**CLASSIFICATION**

Angelonia hybrid.

**VARIETAL DENOMINATION**

'Anwhit'.

**BACKGROUND OF THE INVENTION**

The present invention comprises a new and distinct cultivar of Angelonia known by the varietal name 'Anwhit'. The new variety was discovered in 1999 in a selective breeding program in Dresden, Germany. The new variety is the result of a combination breeding of 50 seedlings with white colored flowers. The new variety exhibits the white flower color and erect growth of its heritage, but differs in its flower shape. The new variety was first asexually reproduced by cuttings in Dresden, Germany. The new variety has been trial and field tested and has been found to retain its distinctive characteristics and remain true to type through successive propagations.

The new variety differs from the unpatented variety 'AngelMist White' as follows:

	'Anwhit'	'AngelMist White'
Leaf width	Wide	Narrow
Flower size	Large	Small
Growth	Erect	Trailing

**DESCRIPTION OF THE DRAWINGS**

The accompanying photographic drawing illustrates the new variety, with the color being as nearly true as is possible with color illustrations of this type.

**2**

**DESCRIPTION OF THE PLANT**

The following detailed description sets forth the characteristics of the new cultivar. The data which defines these characteristics were collected by asexual reproductions carried out in Dresden, Germany. The color readings were taken on plants grown in pots outdoors in shadow during summer. Color references are primarily to The R.H.S. Colour Chart of The Royal Horticultural Society of London.

10

**PLANT**

Form: Erect.

Height from media surface to top of foliage: 50–60 cm.

15 Height from media surface to top of cluster: 50–60 cm.

Growth: 4–15 stems depending on age of plant.

Strength: Does not require artificial support.

Time to initiate roots: 3 weeks.

Leaves:

20 Size.—10–14 cm long; 1.5–2.0 cm wide.

Shape.—Lanceolate overall; pointed apex; pointed base.

Margin.—Toothed.

Texture.—Smooth.

25 Color.—137A upper side; 137C underside.

Ribs and veins.—Venation: Net-shaped, not parallel.

Color: 137C.

Petioles: Absent.

Stem/branches:

Color.—137D.

30 Internode length.—Vegetative: 3–4 cm. Generative: 1–1.5 cm.

35

**THE BUD**

Shape when just showing color:

Overall.—Racemose.

Individual bud.—Spherical.

# US PP13,179 P2

3

Color: Green Group 137A.  
Size of individual bud when just showing color: 0.3–0.4 cm long; 0.3–0.4 cm wide.

## INFLORESCENCE

Blooming habit: Single, up to 4 flowers per node, group of flowers at node is 5–6 cm across.

Flowers:

*Form*—Zygomorph.

*Number of flowers per plant*.—70–100.

*Size*.—3.0–3.5 cm wide; 4.0–4.5 cm long; maximum 1 cm deep.

*Petals*.—Color: Upper surface: White Group 155C. Lower surface: White Group 155C. Size: 1.5 cm long; 2.0 cm wide. Number per flower: 5 Shape: Ondulated. Margin: Smooth.

*Texture and appearance*.—Velvety.

Petaloids: Absent.

Pedicel:

*Length*.—2.5–3 cm.

*Diameter*.—1 mm.

*Color*.—138A.

Peduncle: Absent.

Disease/pest resistance: No unusual susceptibility to diseases or pests has been noted to date.

Lasting quality: Several weeks.

## REPRODUCTIVE ORGANS

Stamens:

*Anthers*.—0.2–0.4 cm long.

4

*Filaments*.—Length: 0.2–0.4 cm. Color: 156B.

*Pollen*.—156C.

Pistils:

*Number*.—7.

*Length*.—0.2 cm.

*Stigma*.—White.

*Style*.—1 cm long; white.

Fruit/seed: Not self-pollinating.

## GENERAL CHARACTERISTICS

1. Suitable as a potting plant and as a bedding plant.
2. Possible as a cut flower.
3. Long-lasting.
4. Not susceptible to flower shattering.
5. Growth regulators not required.
6. Branching is better after pinching.
7. Color of foliage stable medium green.
8. Flowers through the whole summer.
9. Heat tolerant, less tolerant to drought and not hardy in winter.

I claim:

1. A new and distinct variety of angelonia plant substantially as shown and described.
