(57) **ABSTRACT**

A new cultivar of Clematis named 'Zoin' that is character-  
ized by an upright scandent habit, low to medium height and  
pink flowers that are suitable for use as cut flowers. In  
combination these traits set 'Zoin' apart from all other  
existing varieties of Clematis known to the inventor.

**2 Drawing Sheets**

**1**

Botanical Classification: *Clematis diversifolia*.  
Variety denomination: 'Zoin'.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar  
of Clematis, a woody half climber that is grown for use in  
small gardens and for its cut flowers. The new cultivar is  
known botanically as a *Clematis diversifolia* and will be  
referred to hereinafter by the cultivar name 'Zoin'.

'Zoin' was bred by the inventor in 1993 in a cultivated  
area of Boskoop, Netherlands by crossing the female parent  
*Clematis integrifolia* 'Rosea' (not patented) with the male  
parent Clematis 'Warsawska Nike' (not patented). The  
breeder's goal was to produce a pink form of Clematis  
'Durandii'. In addition, the breeder sought to produce a  
low-growing clematis resistant to disease and wilt that  
produces long lasting cut flowers. Only one cross was made.  
There were no intermediate crosses. 'Zoin' was selected by  
the inventor in 1997 from the many resulting seedlings. Its  
pink flower with contrasting yellow stamens is a unique to  
the diversifolia group.

The distinguishing characteristics of 'Zoin' are its upright  
habit, pink bell shaped flowers, long flowering, low to  
medium height and blossoms that are suitable for use as cut  
flowers. The closest comparison plant is *Clematis durandii*  
(unpatented) which exhibits a blue flower. 'Zoin' is distin-  
guishable from *Clematis durandii* by its pink colored flow-  
ers.

'Zoin' was first asexually propagated by the inventor in  
Boskoop, Netherlands in 1998 using softwood cuttings.  
Since that time, under careful observation, the distinguishing  
characteristics have been determined stable and uniform in  
successive generations.

**SUMMARY OF THE INVENTION**

The following represent the distinguishing characteristics  
of the new Clematis cultivar 'Zoin'. In combination these  
traits set 'Zoin' apart from all other existing varieties of  
Clematis known to the inventor. 'Zoin' has not been tested  
under all possible conditions and phenotypic differences

**2**

may be observed with variations in environmental, climatic,  
and cultural conditions, however, without any variance in  
genotype.

1. The flowers of Clematis 'Zoin' are suitable for use as  
cut flowers.

2. Clematis 'Zoin' is low to medium in height and suitable  
for a small garden.

3. Clematis 'Zoin' exhibits bell shaped pink flowers in  
spring and summer.

4. Clematis 'Zoin' is a woody half climber that is hardy to  
USDA Zone 5.

5. Clematis 'Zoin' exhibits dark green foliage.

6. Clematis 'Zoin' is resistant to wilt and disease.

7. Clematis 'Zoin' exhibits an upright habit.

**BRIEF DESCRIPTION OF THE DRAWINGS**

The accompanying color photographs illustrate the dis-  
tinguishing traits of the new Clematis cultivar 'Zoin'. The  
plants in the photographs were grown out of doors in  
Boskoop, Netherlands in one-gallon containers before plant-  
ing in the ground.

The first drawing illustrates entire plants in bloom from a  
side perspective.

The second drawing is a close-up view of the leaves and  
flowers. All photographs are taken using conventional tech-  
niques and although foliage colors may appear different  
from actual colors due to light reflectance, they are as  
accurate as possible by conventional photography.

**BOTANICAL DESCRIPTION OF THE PLANT**

The following is a detailed description of the Clematis  
cultivar named 'Zoin.' Data was collected in Arroyo Grande,  
Calif. from the inventor and plants grown in one-gallon  
containers out of doors. Color determinations are in accor-  
dance with The Royal Horticultural Society Colour Chart  
except where general color terms of ordinary dictionary  
significance are used. The growing requirements are similar  
to the species. Under normal growing conditions there are no  
known disease problems known to the inventor.

Botanical classification: *Clematis diversifolia* 'Zoin'.

Common name: Virgins bower.

Uses: Cut flowers and climber for a small garden.

Parent: 'Zoin' is a hybrid resulting from the induced hybridization of the following plants:

*Female parent.*—*Clematis integrifolia* 'Rosea'.

*Male parent.*—*Clematis* 'Warsawska Nike'.

Type: Perennial.

Vigour: Vigorous. Generally grows 1.70 meters in length during the first year.

Habit: Upright and scandent.

Height (one-gallon): 42 cm. in height (at maturity 'Zoin' is 150–200 cm. in height).

Width (one-gallon): 60 cm. in width.

Hardiness: USDA Zone 5.

Disease resistance: Resistant to clematis wilt.

Propagation: Softwood cuttings.

Root system: Fibrous.

Soil: Plant in well-drained soils.

Sunlight: Plant in full sunlight.

Plant sexuality: Bisexual.

Time to initiate roots: 2 weeks are required for an initial cutting to produce roots.

Crop time: 8–10 months are required to produce a finished one-gallon from a rooted cutting.

Seasonal interest: Flowers in spring and summer.

Stem:

*Branching habit.*—Upright.

*Internode length.*—8–10 cm. between nodes.

*Stem diameter.*—3 mm. in diameter.

*Stem length.*—40 cm. in length.

*Shape.*—Cylindrical and articulate.

*Surface.*—Fluted with pubescent nodes.

*Stem color.*—171B.

Foliage:

*Type.*—Deciduous.

*Leaf arrangement.*—Opposite.

*Leaf division.*—Compound (singular and ternary).

*Leaflet division.*—Simple.

*Leaflet shape.*—Oblong to lanceolate.

*Leaflet base.*—Base of terminal leaflet obtuse-subcordate. Base of side leaves oblique.

*Leaflet apex.*—Attenuate.

*Leaflet venation.*—Reticulate.

*Vein color (adaxial surface).*—147D.

*Vein color (abaxial surface).*—147D.

*Leaf surface (adaxial).*—Matte and puberulent.

*Leaf surface (abaxial).*—Shiny and puberulent.

*Leaf attachment.*—Petiolate and articulate. Side leaflets are subsessile to short articulate.

*Petiole dimensions.*—2.5–6 cm. in length and 2 mm. in diameter.

*Petiole color.*—138C.

*Petiole shape.*—Cylindrical and twisted.

*Leaf margin.*—Entire and revolute.

*Leaf texture.*—Soft and flexible.

*Leaf length.*—7–9 cm. in length.

*Leaf width.*—5–7 cm. in width.

*Leaflet length.*—2–4 cm. in length.

*Leaflet width.*—1–2 cm. in width.

*Leaf color (adaxial surface).*—147A.

*Leaf color (abaxial surface).*—147C.

*Foliar fragrance.*—Absent.

Flower:

*Flower form.*—Solitary, axillary and terminal inflorescence.

*Inflorescence type.*—Dichasial cyme.

*Persistent or self-cleaning.*—Self-cleaning.

*Color of peduncle.*—148D.

*Peduncle length.*—5.1–10 cm. in length.

*Peduncle diameter.*—1.1–3 mm. in diameter.

*Surface of peduncle.*—Pubescent.

*Diameter of flower.*—6–10 cm. in diameter.

*Shape.*—Open campanulate.

*Sexuality.*—Bisexual.

*Aspect.*—Facing upwards.

*Bud.*—Upright and lanceolate.

*Bud color.*—61A.

*Bud surface.*—Glossy.

*Petals.*—Apetalous.

*Tepals.*—Four in number.

*Color of tepals (inside surface).*—A combination of 72C suffused with 67A.

*Color of tepals (outside surface).*—72C.

*Tepal shape.*—Oblanceolate — obovate.

*Tepal apex.*—Revolvate and mucronate.

*Tepal surface.*—Furrowed.

*Tepal margin.*—Sinuous and pubescent.

*Tepal length.*—5 cm. in length.

*Tepal width.*—3 cm. in width.

*Unfused or fused.*—Tepals are unfused and do not overlap.

*Blooming period.*—End of June, July, August and the beginning of September.

*Fragrance.*—Slightly fragrant.

Reproduction organs:

*Stamens.*—Polyandrous.

*Pubescence.*—Present.

*Arrangement of stamens.*—Spirally arranged.

*Color of stamen filament.*—12B.

*Dimensions of stamen.*—0.5–0.8 cm. in length and 1 mm in diameter.

*Dimensions of anther.*—1 mm. in width and 0.4 cm. in length.

*Pollen color.*—4D.

*Anther color.*—4D to 151A and becoming black 202A.

*Pistil.*—One.

*Color of pistil.*—155C.

*Dimensions of pistil.*—0.9–1 cm.

*Pubescence.*—Present.

*Stigma color.*—155C.

*Style color.*—155C.

*Style form.*—Plumose.

*Style dimensions.*—2 cm. in length and 3–4 mm. in width.

*Ovary position.*—Superior.

*Ovary color.*—Pale brown.

*Ovary shape.*—Oval.

Seed:

*Dimensions of fruit.*—4 cm. in diameter and 2 cm. in height.

*Seed surface.*—Villous.

*Villi color.*—156C.

*Seed shape.*—Oval.

*Seed color.*—136A.

*Seed dimensions.*—1.50 mm. in diameter and 3 mm. in length.

I claim:

1. A new and distinct variety of *Clematis* plant named 'Zoin' as described and illustrated.
