(57) **ABSTRACT**

A new miniature rose plant which has abundant, orange-  
yellow colored flowers and attractive glossy dark foliage.  
The variety successfully propagates from softwood cuttings  
and is suitable for year round production in commercial  
glasshouses as a flowering pot plant.

**3 Drawing Sheets**

**1**

Botanical classification: *Rosa hybrida*.  
Varietal denomination: 'KORjubla'.

**BACKGROUND OF THE NEW PLANT**

The present invention constitutes a new and distinct  
variety of miniature rose plant named 'KORjubla' which  
was developed by artificially pollinating an unnamed seed-  
ling (unpatented) with an unnamed seedling (unpatented).

The objective of the hybridization of this rose variety for  
commercial greenhouse culture was to create a new and  
distinct variety with:

1. Uniform and abundant flowers with good keepability;
2. Attractive long lasting foliage and compact growth;
3. Year round flowering under glasshouse conditions;
4. Suitability for production from softwood cuttings in  
pots; and
5. Durable flowers and foliage which make the variety  
suitable for distribution in the floral industry.

This combination of qualities was not present in previ-  
ously available commercial cultivars of this type and dis-  
tinguish 'KORjubla' from other varieties.

The two parents were crossed in the summer of 1999 and  
the resulting seed was sown in December 1999 in a con-  
trolled glasshouse environment. The seeds from hybridiza-  
tion were planted in a controlled environment in Klein  
Offenseth, Sparrieshoop, Germany and evaluations were  
conducted on the resulting plants.

Asexual reproduction of 'KORjubla' by softwood cut-  
tings was first done in Denmark and later in California in  
controlled greenhouse environments. The characteristics of  
the new variety remain as true to type through successive  
propagations.

The new rose variety may be distinguished from its seed  
parent, an unnamed breeding seedling, by the following  
combination of characteristics:

1. 'KORjubla' has big double flowers, while the seed  
parent has big single flowers.

**2**

2. 'KORjubla' has orange-yellow colored petals, while the  
seed parent has dark yellow petals.

The new variety may be distinguished from its pollen  
parent, an unnamed breeding seedling by the following  
combination of characteristics:

1. 'KORjubla' has smaller flowers and foliage as com-  
pared to the pollen parent.
2. 'KORjubla' has Orange-Yellow colored petals, while  
the pollen parent has light yellow petals.

The new variety differs from 'KORbritta', U.S. Plant Pat.  
No. 11,146, as set forth in Table 1.

**TABLE 1**

	'KORjubla'	'KORbritta'
Petal color, upper surface	Orange Group 24A-B	Yellow-Orange Group 21B
Petal color, reverse surface	Orange Group 29A	Yellow-Orange Group 21B
Petal count	35-45 petals	20-25 petals

**DESCRIPTION OF THE DRAWINGS**

The accompanying color illustrations show as true as is  
reasonably to obtain in color photographs of this type, the  
typical characteristics of the buds, flowers, leaves, stems of  
'KORjubla'.

In photo sheet # 1:

- FIG. 1 shows a young shoot.
- FIG. 2 shows a bud before opening of the sepals.
- FIG. 3 shows a bud at the opening of the sepals.
- FIG. 4 shows a bud at the opening of the petals.
- FIG. 5 shows a flower during the course of opening.
- FIG. 6 shows an open flower, obverse plan view.
- FIG. 7 shows an open flower, reverse plan view.
- FIG. 8 shows a fully open flower, obverse plan view.
- FIG. 9 shows a fully open flower, reverse plan view.

In photo sheet # 2:

- FIG. 10 shows a receptacle with stamens and pistils.

FIG. 11 shows a receptacle with pistils and stamens removed.

FIG. 12 shows detached flower petals, outer surface.

FIG. 13 shows detached flower petals, inner surface.

FIG. 14 shows a bare stem exhibiting thorns and flower attachment.

In photo sheet #3:

FIG. 15 shows three leaflets, upper side.

FIG. 16 shows three leaflets, under side.

FIG. 17 shows five leaflets, upper side.

FIG. 18 shows five leaflets, under side.

#### DESCRIPTION OF THE NEW PLANT

The following is a detailed description of 'KORjubla', as observed in its growth in greenhouses in Fraugde, Denmark and greenhouses in Santa Barbara Calif., both at 20–25° C.

Descriptions were made from plants 11 to 13 weeks old after propagation, produced in a pot treated with growth regulators normally used in the greenhouse production process. The growth regulator Paclobutrazol was applied at 15–30 ppm weekly beginning at a plant age of 8 weeks. The peduncle lengths mentioned may actually be shorter and the foliage color several shades darker than on untreated specimens. Color references are made using The Royal Horticultural Society (London, England) Colour Chart, 1995, except where common terms of color are used.

#### THE PLANT

Classification:

*Botanical.*—*Rosa hybrida*.

*Commercial.*—Miniature.

Plant growth: Moderately vigorous. Grows compact upright to bushy. When grown as 10 cm pot plant, the average height of the plant itself is 18–20 cm, and average width is 20 cm. When grown as a 15 cm pot plant, the average height of the plant itself is 22–27 cm, and average width is 30 cm. Production time is generally 11–13 weeks depending on average temperature, light level, and cultural practices.

Stem:

*Color.*—Young wood: Green Group 138B, with intonations of Greyed-Red Group 178A–B. Older wood: Green Group 138A.

*Surface.*—Young wood: Smooth. Older wood: Smooth.

*Stem diameter.*—2–5 mm.

*Internode length.*—10–25 mm.

*Number of internodes.*—7–10.

*Thorns.*—Incidence: Moderate number of thorns. Size: 5–6 mm.

*Color.*—Young: Red-Purple Group 66C. Mature: Greyed-Orange Group 165C–D.

*Shape.*—Hooked downwards.

#### FOLIAGE

Arrangement: Alternate, compound with 3–7 leaflets per leaf, generally symmetrical, abundant, and flat in aspect.

Stipules at petiole base.

Quantity of leaves: 7–10 per lateral branch.

Leaf size:

*Length.*—70–85 mm.

*Width.*—55–65 mm.

Petioles:

*Color.*—Green Group 138C with intonations of Green Group 136B on upper surface.

*Prickles.*—On lower surface.

*Length.*—10–15 mm.

*Diameter.*—About 1 mm.

Stipules:

*Size.*—8–10 mm.

*Surface.*—Smooth.

*Color.*—Green Group 137B with intonations of Red-Purple Group 66B.

*Margin.*—Stipitate glands present.

Rachis:

*Color.*—Green Group 137B with intonations of Greyed-Red Group 185A.

*Prickles.*—On lower surface.

*Length.*—10–25 mm.

Leaflets:

*Margin.*—Serrated.

*Shape.*—Ovate with acute apex and obtuse base.

*Texture.*—Smooth.

*Appearance.*—Glossy.

*Size.*—Length: 15–45 mm. Width: 15–20 mm.

*Color.*—Young foliage: Upper surface: Green Group 137A. Lower surface: Green Group 138A. Mature foliage: Upper surface: Green Group 139A. Lower surface: Yellow-Green Group 138A.

#### INFLORESCENCE

Blooming habit: Recurrent.

Number of flowers: Generally 1–3 buds per flowering stem.

Peduncle:

*Color.*—Green Group 138A with intonations of Greyed-Red Group 178A–B.

*Texture.*—Smooth.

*Length.*—20–25 mm.

*Form.*—Upright.

*Receptacle.*—Surface: Smooth. Shape: Funnel-shaped.

*Size:* Height: 7 mm. Width: 8 mm.

*Color.*—Green Group 138A with intonations of Greyed-Red Group 178A–B.

Sepals:

*Quantity.*—5.

*Shape.*—Narrowly ovate with acute tip.

*Texture.*—Slightly pubescent.

*Margin.*—Foliaceous appendages on three of the five sepals.

*Appearance.*—Dull.

*Color.*—Upper surface: Green Group 138A. Reverse surface: Green Group 138B–D.

Buds:

*Size when just opening.*—Length: 20–25 mm. Width: 12–14 mm.

*Shape.*—Ovoid.

*Color.*—Orange Group 25B–C at one-fourth opened.

Flower:

*Duration.*—As a pot plant, flowers last 10–16 days.

*Fragrance.*—None.

*Size.*—45–50 mm in diameter on average.

*Form (shape of flower when viewed from the side).*—Upon opening: Cupped. Open flower: Flat.

*Color.*—Petals, upon opening: Upper surface: Orange Group 24A, with intonations of Yellow Group 13A toward the basal petal spots. Reverse surface: Orange Group 29A, with intonations of Yellow Group 13A toward the basal petal spots. Petals, after opening: Upper surface: Yellow Group 11D, with intonations of Yellow Group 13A toward basal petal spots. Reverse surface: Yellow Group 11D, with intonations of Yellow Group 13A toward basal petal

## US PP14,106 P3

### 5

spots. Basal petal spots: Size: 5–10 mm. Color: Green-White Group 157D to Yellow Group 11C. General tonality of open flower: Orange Group 24A–B on third day fading to Yellow-Orange Group 19A–B.

#### Petals:

*Petal reflex.*—Outermost petals reflex backwards upon opening. Fully open, all petals reflex backward.

*Texture.*—Smooth and satiny.

*Petal edge.*—Uniform.

*Petal count.*—Approximately 35–45 per flower.

*Petal size.*—Length: 25 mm. Width: 20 mm.

*Shape.*—Outer petals: Ovate to round. Inner petals: Ovate to round.

*Petaloids.*—Usually none.

#### Reproductive organs:

*Stamens.*—Number: Approximately 80–90 per flower.

Pollen: Color: Greyed-Orange Group 164A.

Amount: Average. Anthers: Size: 1 mm. Color:

Greyed-Orange Group 164A. Shape: Oblong. Number:

80–90. Filaments: Size: 3–4 mm. Color: Yellow-

Green Group 154D.

*Pistils.*—Number: Approximately 50–60 per flower.

Stigmas: Location: Superior in location to anthers.

### 6

Color: Yellow Group 1C. Styles: Color: Yellow Group 1C. Length: 2–3 mm.

#### GROWTH

Vegetation: Dense.

Blooming: Abundant.

Aptitude to bear fruit: Poor.

Resistance to diseases: Above average resistance to mildew and Botrytis under normal growing conditions in Fraugde, Denmark and Santa Barbara, Calif.

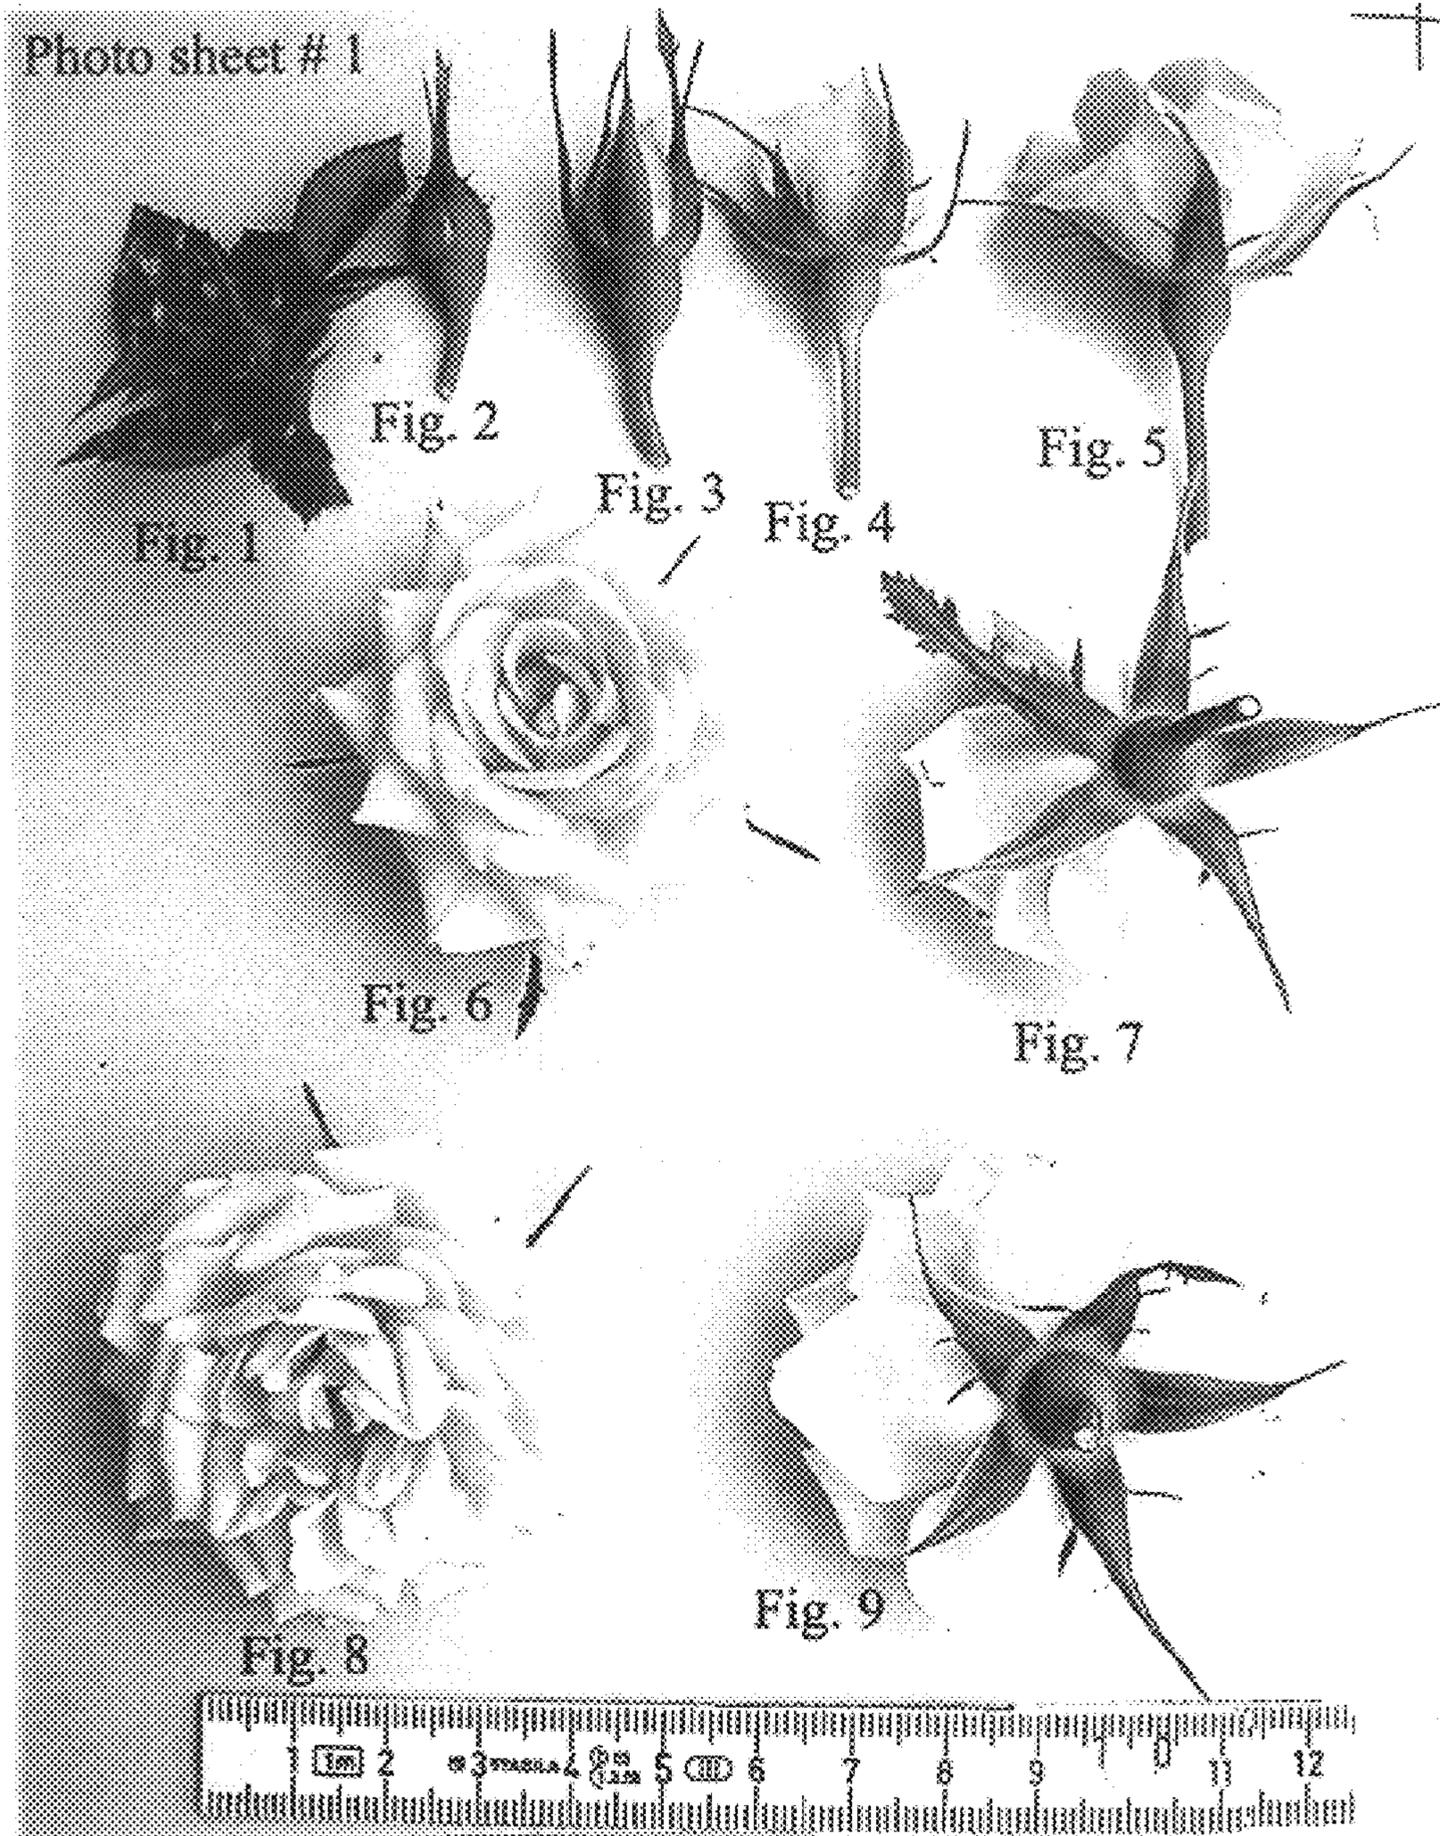

Hips/seeds: Unknown because the plant has not been grown to the stage of seed development due to the fact that the variety is developed for use as a flowering potted plant only.

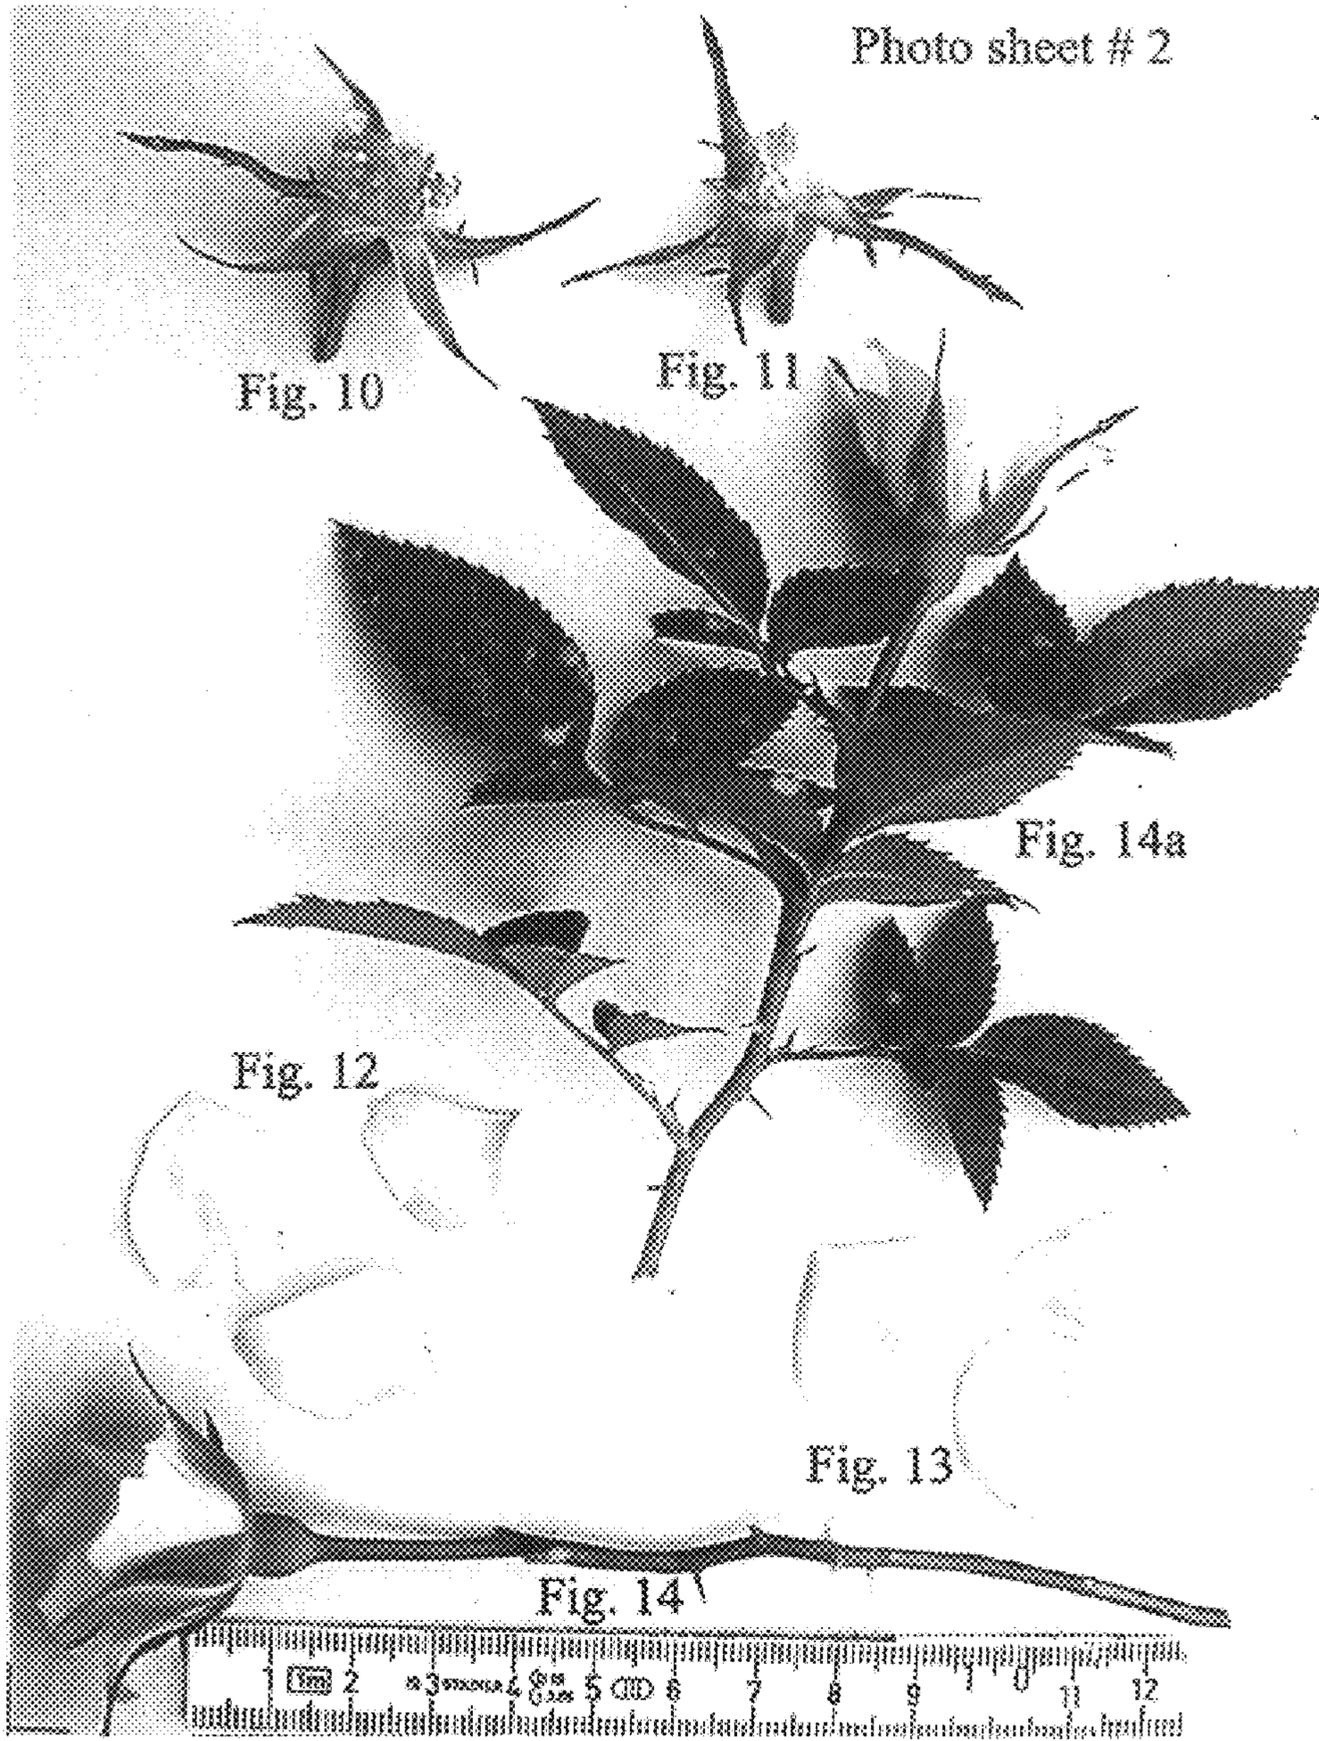

Winter hardiness and drought/heat tolerance: This variety is a potted flowering plant developed for one time use only and has not been tested for winter hardiness or drought/heat tolerance.

I claim:

1. A new and distinct variety of rose plant substantially as shown and described.
