(57)**ABSTRACT**

A new and distinct cultivar of Fuchsia plant named 'Goetzlucy', characterized by its upright, somewhat outwardly spreading and compact plant habit; freely branching habit; dense and full plant growth habit; and numerous white and red purple-colored flowers.

1 Drawing Sheet

Botanical classification/cultivar designation: Fuchsia×hybrida cultivar Goetzlucy.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar of Fuchsia plant, botanically known as Fuchsia×hybrida, and hereinafter referred to by the name 'Goetzlucy'.

The new Fuchsia is a product of a planned breeding program conducted by the Inventor in Hebrechtingen, Germany. The objective of the breeding program was to create new Fuchsia cultivars with compact plant habit and numerous attractive flowers.

The new Fuchsia originated from a cross-pollination 15 made by the Inventor of a proprietary selection Fuchsiax hybrida identified as code number 210/97, not patented, as the female, or seed, parent with a proprietary selection Fuchsia×hybrida identified as code number 212/97, not patented, as the male, or pollen, parent. The cultivar Goet- 20 zearl was discovered and selected by the Inventor as a flowering plant within the progeny of the stated crosspollination in a controlled environment in Hebrechtingen, Germany, during the summer of 1997.

Asexual reproduction of the new Fuchsia by terminal cuttings taken at Hebrechtingen, Germany has shown that the unique features of this new Fuchsia are stable and reproduced true to type in successive generations.

BRIEF SUMMARY OF THE INVENTION

The cultivar Goetzlucy has not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environment such as temperature and daylength, without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'Goetzlucy'. These characteristics in combination distinguish 'Goetzlucy' as a new and distinct Fuchsia cultivar:

- 1. Upright, somewhat outwardly spreading and compact plant habit.
- 2. Freely branching habit; dense and full plant growth habit.
- 3. Numerous white and red purple-colored flowers.

Sepal color of plants of the new Fuchsia is more intense than sepal color of plants of the female parent. In addition, plants of the new Fuchsia flower earlier than plants of the female parent. Plants of the new Fuchsia are more outwardly spreading and more freely flowering than plants of the male parent.

Plants of the new Fuchsia can be compared to the cultivar Goetzviol, disclosed in U.S. Plant patent application Ser. No. 10/385,260. In side-by-side comparisons conducted in Hebrechtingen, Germany, plants of the new Fuchsia were more spreading than plants of the cultivar Goetzviol and differed in flower coloration.

BRIEF DESCRIPTION OF THE PHOTOGRAPHS

The accompanying colored photographs illustrate the overall appearance of the new Fuchsia, showing the colors as true as it is reasonably possible to obtain in colored 30 reproductions of this type. Colors in the photographs may differ slightly from the color values cited in the detailed botanical description which more accurately describe the colors of the new Fuchsia.

The photograph at the top of the sheet comprises a side perspective view of a typical flowering plant of 'Goetzlucy' grown in a 15-cm container.

3

The photograph at the bottom sheet is a close-up view of typical flowers, flower buds and leaves of 'Goetzlucy'.

DETAILED BOTANICAL DESCRIPTION

The aforementioned photographs and following observations and measurements describe plants grown in Bonsall, Calif., under commercial practice during the winter in a polypropylene-covered shadehouse with day temperatures ranging from 18 to 35° C., night temperatures ranging form 7 to 18° C., and light levels about 5,000 to 7,000 footcandles. One rooted cutting was planted per 15-cm container and plants were grown for about nine weeks. In the following description, color references are made to The Royal Horticultural Society Colour Chart, 1995 Edition, except where general terms of ordinary dictionary significance are used.

Botanical classification: Fuchsia×hybrida cultivar Goetzlucy.

Parentage:

Female or seed parent.—Proprietary selection of Fuchsia×hybrida identified as code number 210/97, not patented.

Male, or pollen, parent.—Proprietary selection of Fuchsia×hybrida identified as code number 212/97, not patented.

Propagation:

Type cutting.—Terminal cuttings.

Time to initiate roots.—About two to three weeks.

Time to produce a rooted cutting.—About eight weeks. Root description.—Fine and freely-branching; white to light brown in color.

Plant description:

Form.—Upright, somewhat outwardly spreading and compact plant habit; inverted triangle. Freely branching habit; dense and full plants; about four to five lateral branches develop per plant; pinching (removal of terminal apex) enhances lateral branch development. Freely flowering. Moderately vigorous.

Plant height at flowering.—About 22 cm.

Plant diameter at flowering.—About 17 cm.

Lateral branch description.—Length: About 18 cm. Diameter: About 2.25 cm. Internode length: About 2 cm. Strength: Strong. Texture: Slightly pubescent. Color: 144B.

Foliage description.—Arrangement: Simple, opposite. Length: About 3.8 cm. Width: About 2.8 cm. Shape: Ovate. Apex: Acute. Base: Obtuse. Margin: Mostly entire with very tiny points. Texture, upper and lower surfaces: Smooth, glabrous. Venation pattern: Pinnate, arcuate. Petiole length: About 6 mm. Petiole diameter: About 1 mm. Petiole texture, upper and lower surfaces: Smooth, glabrous. Color: Developing and fully expanded leaves, upper surface: 147A. Developing and fully expanded leaves, lower surface: 147B. Venation, upper surface: 147B. Venation, lower surface: 147C. Petiole, upper and lower surfaces: 144B.

Flower description:

Flower type and habit.—Single bi-colored axillary flowers. Freely flowering; potentially two flowers per leaf axil; about two open flowers and about six to eight flower buds per lateral branch. Flowers not persistent. Flowers not fragrant.

Natural flowering season.—March through October in southern California; flowering continuous during this period.

Flower longevity.—Flowers last about five to seven days on the plant.

Flower orientation.—Initially upright, then pendulous. Flower diameter.—About 4.6 cm.

Flower height.—About 5.5 cm.

Flower buds.—Shape: Ovoid. Length: About 3 cm. Width: About 8 mm. Color: 58B.

Petals.—Quantity: About eight; arranged in a single whorl, imbricate. Length: About 1.8 cm. Width: About 1.6 cm. Shape: Fan-shaped. Apex: Rounded. Margin: Entire. Texture, upper and lower surfaces: Glabrous, smooth, velvety. Color: When opening, upper and lower surfaces: 155D. Fully opened, upper and lower surfaces: 155D; venation towards the base, 63B.

Sepals.—Quantity: Four; arranged in a single whorl, fused at base. Length, from apex of tube to apex of sepals: About 2 cm. Length, tube: About 7 mm. Width: About 8 mm. Tube diameter: About 5 mm. Shape: Narrowly elliptic to linear. Apex: Acuminate. Margin: Entire. Texture, upper and lower surfaces: Glabrous, smooth. Color: When opening and fully opened, upper surface: 58B. When opening and fully opened, lower surface: 58B. Tube: 58B.

Peduncles.—Length: About 1.3 cm. Diameter: About 1.5 mm. Aspect: Horizontal to arching. Strength: Strong. Texture: Smooth, glabrous. Color: 144A.

Reproductive organs.—Stamens: Stamen number: Eight per flower. Anther size: About 3 mm by 2 mm. Anther shape: Oblong. Anther color: 58D. Pollen amount: Scarce. Pollen color: 2C. Pistils: Pistil number: One per flower. Pistil length: About 5.5 cm. Style length: About 4.4 cm. Style color: 73B. Stigma shape: Rounded, four-segmented. Stigma color: 10C. Ovary color: 144A.

Seed/fruit.—Seed and fruit production has not been observed.

Disease/pest resistance: Plants of the new Fuchsia have not been observed to be resistant to pathogens and pests common to Fuchsias.

Temperature tolerance: Plants of the new Fuchsia have been observed to tolerate low temperatures of 0° C. and high temperatures of 38° C.

Garden performance: Plants of the new Fuchsia perform have been observed to perform well in the garden and are tolerant to rain and wind.

It is claimed:

1. A new and distinct cultivar of Fuchsia plant named 'Goetzlucy', as illustrated and described.
