(57) **ABSTRACT**

A *Chrysanthemum* plant named 'Cevyking Dark' characterized by its small sized single-type blooms with yellow ray-florets and dark brown center, with a response time of 56 days.

3 Drawing Sheets**1****RELATED CULTIVARS**

'Cevyking Dark' is a sport of the variety 'Cevyking' (U.S. Plant patent application Ser. No. 09/708,588), which is also the parent of the variety 'Vyking Orange Dark' (U.S. Plant Pat. No. 14,055).

BACKGROUND OF THE INVENTION

'Cevyking Dark' is a product of a breeding and selection program which had the objective of finding color mutants of 'Cevyking' with a dark center of the blooms. The new plant of the present invention comprises a new and distinct cultivar of *Chrysanthemum* plant that is a natural occurring sport of a parent *Chrysanthemum* named 'Cevyking'. A comparison with parent *Chrysanthemum* 'Cevyking' is also made in this application. The new cultivar was discovered as a whole plant mutation in 2001 by Arnold G. P. Vijverberg in a controlled environment (greenhouse) in 's-Gravenzande, Holland. The first act of asexual reproduction of 'Cevyking Dark' was accomplished when vegetative cuttings were taken and propagated from the initial selection in 2001 in 's-Gravenzande Holland.

SUMMARY OF THE INVENTION

The present invention is a new and distinct variety of *Chrysanthemum* bearing small sized blooms with yellow ray-florets and a dark brown center.

BRIEF DESCRIPTION OF THE DRAWINGS

The present invention of a new and distinct variety of *Chrysanthemum* is shown in the accompanying drawings, the color being as nearly true as possible with color photographs of this type.

FIG. 1 shows a plant of the cultivar in full bloom.

FIG. 2 shows the various stages of bloom of the new cultivar.

FIG. 3 shows the foliage of the new cultivar.

2**DESCRIPTION OF THE INVENTION**

This new variety of *Chrysanthemum* is of the botanical classification *Chrysanthemum morifolium* L. The observations and measurements were gathered from plants grown in April/May in a greenhouse in Rijsenhout, Holland in a photo-periodic controlled crop under conditions generally used in commercial practice. The greenhouse temperatures during this crop were at day-time between 18° C. and 25° C. and at night 20° C. After a long day period of 14 days, the photo-periodic response time in this crop was 56 days. After the long day period to flowering, growth retardants were applied 2 to 3 times in an average dose of 2.5 gram/liter water. Plants of the new variety are sensitive to infestation by insects like thrips. No tests were done on cold or drought resistance. This new variety produces small sized blooms with yellow ray-florets and dark brown disc-florets blooming on the plant for 3 weeks. This new variety of *Chrysanthemum* has been found to retain its distinctive characteristics throughout successive propagations however the phenotype may vary significantly with variations in environment such as light intensity and temperature. To show the phenotype as described 'Cevyking Dark' can be planted without assimilation lightning (high pressure sodium lamps) between week 1 and week 36. under greenhouse conditions in Holland. With assimilation light (minimum level 2500 lux) it can be planted year round under greenhouse conditions in Holland.

From the cultivars known to inventor the most similar existing cultivar in comparison to 'Cevyking Dark' is the parent 'Cevyking', and 'Vyking Orange Dark' which is also a sport of 'Cevyking'. When 'Cevyking', 'Cevyking Dark' and 'Vyking Orange Dark' are being compared the following differences and similarities are noticed: The differences of 'Cevyking', 'Cevyking Dark' and 'Vyking Orange Dark' are (1) Color tip of disc-florets. The tip of the disc-florets of the parent variety 'Cevyking' is brown and fading to green-brown in summer, while the tips of 'Cevyking Dark' are dark brown all year round. The tip of the disc-florets of 'Vyking Orange Dark' is light brown. (2) Color ray-florets. The color of the ray-florets of both 'Cevyking' and of 'Cevyking Dark' are yellow, while it is orange in 'Vyking Orange Dark'. (3) Number of blooms per stem. The parent plant 'Cevyking'

and 'Vyking Orange Dark' has on average a smaller number of blooms than 'Cevyking Dark'. For which characteristics 'Cevyking Dark' has been selected out of 'Cevyking'. All other characteristics of 'Cevyking' and 'Cevyking Dark' are similar.

The following is a description of the plant and characteristics that distinguish 'Cevyking Dark' as a new and distinct variety. The color designations are taken from the plant itself. Accordingly, any discrepancies between the color designations and the colors depicted in the photographs are due to photographic tolerances. The color chart used in this description is: The Royal Horticultural Society Colour Chart, edition 1995.

TABLE 1

Botanical Description of cultivar 'Cevyking Dark'	
<u>Bud</u>	
Size	Medium, cross-section 1.5 cm height 1.2 cm
Outside color	Yellow-orange 15B
Involutal bracts	2 rows, length 7 mm, width 3 mm
Involutal bracts among disc-florets	Not present
Involutal bracts color	Yellow-green 146A
<u>Inflorescence</u>	
Type	Single
Height	1.3–1.7 cm
Size	Small
Fully Expanded	4–4.5 cm
Peduncle length	Near the top 6 cm, near the middle 12 cm, near the bottom 16 cm
Peduncle color	Yellow-green 146A
Number of blooms per stem	Average of 12
Performance on the plant	21 days
Seeds (if crossed)	Produced in small quantities, oval shaped, grey-brown 199A, 2 mm in length.
<u>Fragrance</u>	Typical <i>chrysanthemum</i>
<u>Color</u>	
Center of the flower (disc-florets)	Immature Brown 200A Mature Brown 200A
Color of upper surface of the ray-florets	Upper surface Yellow 12A Lower surface Yeltow 7A
Tonality from Distance	A spray mum with yellow flowers and a dark brown disc
Color of the upper surface of the ray florets after aging of the plant	Yellow 12A
Ray florets	
Texture	Upper and under side smooth
Number	55–65, three rows
Cross-section	Concave, one keel
Longitudinal axis of majority	Straight
Length of corolla tube	Short, 0.4–0.6 cm
Ray-floret margin	Entire
Ray-floret length	1.5–2.0 cm
Ray-floret width	0.5–0.7 cm
Ratio length/width	Medium
Shape of tip	Rounded, sometimes dentate
Disc florets	
Disc diameter	1.5 cm
Distribution of disc florets	Numerous clearly visible at all stages of flowering.
Shape	Tubular
Color	Yellow-green 145C at base, Yellow 13B in middle part and Brown 200A at tip
Receptacle shape	Conical raised
<u>Reproductive Organs</u>	
Stamen (present in disc florets only)	Thick, 4 mm in length
Number of stamen	4

TABLE 1-continued

Botanical Description of cultivar 'Cevyking Dark'	
Stamen color	Yellow-green 144A
Pollen	Not present
Styles (present in both ray and disc florets)	Thick
Style color	Yellow-green 145D
Style Length	5 mm
Stigma color	Yellow-green 145D
Stigma Width	1 mm
Ovaries	Enclosed in perianth
<u>Plant</u>	
Form	A spray mum meant for erect culture
Growth habit	Upright
Growth rate	Slow
Height	100 cm
Width	18–20 cm
Internode length	2.5–3 cm
Spray formation	Corymbiform
Stem Color	Yellow-green 146A
Stem Strength	Strong
Stem Brittleness	Present
Stem Anthocyanin Coloration	Present, a thin layer of Greyed-red 181A
Flowering Response(photo-periodic controlled crop, not natural season)	56 Days
<u>Foliage</u>	
Color immature stage	Upper side Yellow-green 146A Under side Yellow-green 146B
Color mature stage	Upper side Yellow-green 147A Under side Yellow-green 147B
Color midvein	Upper side Yellow-green 146B Under side Yellow-green 146C
Size	Large; length 12 cm, width 7 cm
Quantity (number per single stem)	30–32
Shape	Ovate
Texture upper side	Fleshy and glabrous
Texture under side	Pubescent
Venation arrangement	Palmate
Shape of the margin	Crenated
Shape of Base of Sinus Between Lateral Lobes	Round
Margin of Sinus Between Lateral Lobes	Converging
Shape of Base	Truncate
Apex	Mucronate
Petiole length	2.0 cm
Petiole color	Yellow-green 146B

TABLE 2

Differences with the comparison Variety			
	'Cevyking Dark'	'Cevyking'	'Vyking Orange Dark'
Color tip disc-florets	Brown 200A	Greyed Orange 166A	Greyed Orange 166A
Color ray-florets	Yellow 12A	Yellow 12A	Greyed Orange 169C
Number of blooms per stem	12	8	8

I claim:

1. A new and distinct variety of *Chrysanthemum* plant as described and illustrated.
