(57) **ABSTRACT**A new and distinct Hybrid Tea Rose plant named 'Schrenat',
characterized by its glossy dark green leaves; freely branching
habit; plants thornless; dark pink-colored flowers; and
good postproduction longevity.**1 Drawing Sheet****1**Botanical classification/cultivar designation: *Rosa
hybrida* cultivar Schrenat.**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar of Hybrid Tea Rose plant, botanically known as *Rosa hybrida*, commercially produced as a cut flower, and hereinafter referred to by the name 'Schrenat'.

The new cultivar is a product of a planned breeding program conducted by the Inventor in De Kwakel, The Netherlands. The objective of the breeding program was to develop new spray-type cut Rose cultivars with attractive flower petal colors, long and strong stems, and good post-production longevity.

The new cultivar originated from a cross-pollination made by the Inventor in 1997 of two unnamed proprietary selections, not patented. The cultivar Schrenat was discovered and selected by the Inventor as a flowering plant within the progeny of the stated cross-pollination in a controlled environment in De Kwakel, The Netherlands.

Since 1998, asexual reproduction of the new cultivar by cuttings in De Kwakel, The Netherlands has shown that the unique features of the new cultivar are stable and reproduced true to type in successive generations of asexual reproduction.

SUMMARY OF THE INVENTION

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'Schrenat'. These characteristics in combination distinguish the new Hybrid Tea Rose as a new and distinct cultivar:

1. Glossy dark green leaves.
2. Freely branching habit; plants thornless.
3. Dark pink-colored flowers.
4. Good postproduction longevity.

2

Plants of the Hybrid Tea Rose differ primarily from plants of the parent selections in flower color.

Plants of the Hybrid Tea Rose can be compared to plants of the cultivar Schosonne, not patented. In side-by-side comparisons conducted in De Kwakel, The Netherlands, plants of the new cultivar differed from plants of the cultivar Schosonne in the following characteristics:

1. Plants of the new Hybrid Tea Rose were shorter than plants of the cultivar Schosonne.
2. Flowering stems of plants of the new Hybrid Tea Rose did not have thorns whereas flowering stems of plants of the cultivar Schosonne had thorns.
3. Plants of the new Hybrid Tea Rose were more freely flowering than plants of the cultivar Schosonne.
4. Flowers of plants of the new Hybrid Tea Rose had more petals than flowers of plants of the cultivar Schosonne.
5. Flower color of plants of the new Hybrid Tea Rose was darker than flower color of plants of the cultivar Schosonne.

Plants of the new Hybrid Tea Rose have not been observed under all possible environmental conditions. The phenotype may vary significantly with variations in environment such as temperature and light intensity without, however, any variance in genotype.

BRIEF DESCRIPTION OF PHOTOGRAPH

The accompanying colored photograph illustrates the new Hybrid Tea Rose plant, showing the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photograph may differ slightly from the color values cited in the detailed botanical description which accurately describe the colors of the new Hybrid Tea Rose. The photograph comprises a top perspective view of a typical flowering stem of the new Hybrid Tea Rose.

DETAILED BOTANICAL DESCRIPTION

The aforementioned photograph and following observations and measurements describe cut flowering stems of

plants grown in De Kwakel, The Netherlands, in a glass-covered greenhouse with day and night temperatures about 19 and 15° C., respectively. Flowering stems used in the photograph and the description were about five months old and had been pruned. In the following description, color references are made to The Royal Horticultural Society Colour Chart, 1995 Edition, except where general terms of ordinary dictionary significance are used.

Botanical classification: *Rosa hybrida* cultivar Schrenat.
Commercial classification: Hybrid Tea Rose used as a cut flower.

Parentage:

Female, or seed, parent.—Unidentified *Rosa hybrida* proprietary selection, not patented.

Male, or pollen, parent.—Unidentified *Rosa hybrida* proprietary selection, not patented.

Propagation:

Type.—By cuttings grafted onto rootstocks. Typically the *Rosa canina* cultivar Inermis, not patented, is used as the rootstock.

Plant description:

Form/growth habit.—Upright and somewhat outwardly spreading; vigorous.

Productivity.—In The Netherlands and at a planting density of seven plants per square meter, productivity is about 180 to 200 flowering stems per square meter per year.

Plant height.—About 85 cm.

Plant diameter or spread: About 100 cm.

Lateral branches (flowering stems).—Quantity per pruned plant: Freely branching, about eleven. Lateral branch length: About 85 cm; stems initially grow outwardly before becoming erect. Lateral branch diameter: About 6 mm. Internode length: About 3.5 cm. Texture: Smooth, glabrous. Strength: Strong. Aspect: Erect. Color: 137C. Thorns: None observed; plants thornless.

Foliage description.—Arrangement: Alternate; compound with about three, five or seven leaflets per leaf. Quantity of leaves per lateral branch: About 13. Leaf length (seven-leaflet leaf): About 13 to 15 cm. Leaf width (seven-leaflet leaf): About 10 to 12 cm. Terminal leaflet length: About 8.5 cm. Terminal leaflet width: About 5.5 cm. Lateral leaflet length: About 6 cm. Terminal leaflet width: About 3.5 cm. Leaflet shape: Ovate. Leaflet apex: Acuminate. Leaflet base: Obtuse. Leaflet margin: Serrulate. Leaflet texture, upper and lower surfaces: Smooth, leathery, glabrous. Leaflet venation pattern: Pinnate. Leaf petiole length: About 1.75 cm. Leaf petiole diameter: About 1.5 mm. Leaflet petiole length: About 3.5 cm. Leaflet petiole diameter: About 1 mm. Stipules: Quantity: Two at base of petiole. Length: About 1.5 cm. Width: About 5 mm. Texture, upper and lower surfaces: Smooth, leathery, glabrous. Color: Young

and fully expanded foliage, upper surface: 137A. Young and fully expanded foliage, lower surface: 191A. Venation, upper surface: 146B. Venation, lower surface: 147D. Leaf and leaflet petiole, upper and lower surfaces: 146B. Stipules, upper surface: 137A. Stipules, lower surface: 137C.

Flower description:

Flower type and habit.—Consistently symmetrical double flowers; petals arranged in rosettes. Flowers arranged singly at terminals. Petals not persistent; receptacles persistent.

Flowering season/time to flower.—Year-round under greenhouse conditions.

Flower diameter, fully opened.—About 10 to 15 cm.

Flower depth (height), fully opened.—About 5.5 cm.

Flower longevity as a cut flower.—About two weeks.

Flower longevity on the plant.—About three weeks.

Fragrance.—Slight, sweet, typical of *Rosa*.

Flower buds.—Shape: Ovoid. Length: About 3.5 cm. Diameter: About 2.5 cm. Color: 73C.

Petals.—Quantity per flower: About 37. Length: About 4 to 7.5 cm. Width: About 4.3 to 7.3 cm. Shape: Obovate. Apex: Rounded. Margin: Entire. Texture, upper and lower surfaces: Smooth, glabrous, satiny. Aspect: Initially upright and reflexing with development. Color: When opening, upper surface: 68A; towards the base, 4D. When opening, lower surface: 73B; towards the base, 4D. Fully opened, upper surface: 74C; towards the base, 4D; color fading to 74D with subsequent development. Fully opened, lower surface: 73B; towards the base, 4D.

Sepals.—Quantity per flower: About five. Length: About 3.5 cm. Width: About 1.1 cm. Shape: Lanceolate. Apex: Apiculate. Base: Cuneate; fused at receptacle. Margin: Ciliate. Texture, upper and lower surfaces: Satiny; pubescent. Color, upper surface: 144A. Color, lower surface: 138A.

Reproductive organs.—Stamens: Quantity per flower: About 110. Anther length: About 3 mm. Anther diameter: About 1 mm. Anther shape: Elliptic. Anther color: 8C. Filament color: 4C. Pollen: None observed. Pistils: Quantity per flower: About 150. Pistil length: About 6 mm. Style length: About 2 mm. Style color: 4D. Stigma shape: Bi-lobed. Stigma color: 42B. Receptacle height: About 1.2 cm. Receptacle diameter: About 1.3 cm. Receptacle color: 144A.

Seed/fruit.—None observed.

Disease/pest resistance: Plants of the new Hybrid Tea Rose have not been observed to be resistant to pathogens and pests common to *Rosa*.

It is claimed:

1. A new and distinct Hybrid Tea Rose plant named 'Schrenat', as illustrated and described.
