(57) **ABSTRACT**

A new cultivar of *Antirrhinum* plant named ‘YACOY’ that
is characterized by fragrant, large orange and yellow
flowers, mounding habit, and green foliage. In combination
these traits set ‘YACOY’ apart from all other existing
varieties of *Antirrhinums* known to the inventor.

2 Drawing Sheets

1

Genus: *Antirrhinum*. Species: *majus*.
Denomination: YACOY.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar
of snapdragon, known botanically as *Antirrhinum majus* and
referred to hereinafter by the cultivar name ‘YACOY’.

‘YACOY’ was selected by the inventor, in 2000, from a
formal breeding program conducted in a cultivated area of
Congleton, Cheshire, England. The breeding program was
conducted by the inventor and established in 1990, the
objective being to select cultivars of snapdragons that
exhibit new flower colors along with new and improved
growth habits.

‘YACOY’ is of hybrid origin and resulted from the
induced cross-pollination of female and male parent seed-
lings. The female parent is an unnamed plant of the species
Antirrhinum majus (unpatented) and the male parent is an
unnamed *Antirrhinum* (unpatented) derived from open pol-
lination. The female parent plant exhibits a semi-trailing
habit. The male parent exhibits an upright habit. ‘YACOY’
differs from the female parent plant in flower color, intern-
ode length and habit. ‘YACOY’ differs from the male parent
in flower color. ‘YACOY’ exhibits a mounding habit along
with large orange and yellow flowers that distinguish it from
all other *Antirrhinum* known to the inventor. The closest
comparison plants are *Antirrhinum* ‘Lemon Blush Chande-
lier’ (unpatented) and *Antirrhinum* ‘Rose Pink Chandelier’
(unpatented). ‘YACOY’ is distinguishable from the com-
parison plants by mounding habit and orange and yellow
flower color.

The first asexual propagation was conducted in June of
2000 by the inventor in Congleton, Cheshire, England. The
method of propagation used was tip cuttings. Since that time
the unique characteristics of ‘YACOY’ have been found
stable in successive generations.

SUMMARY OF THE INVENTION

The following traits have been repeatedly observed and
represent the characteristics of the new *Antirrhinum* cultivar
‘YACOY’. These traits in combination distinguish this cul-
tivar from all other commercial varieties known to the

2

inventor. ‘YACOY’ has not been tested under all possible
conditions and phenotypic differences may be observed with
variations in environmental, climatic, and cultural condi-
tions.

1. *Antirrhinum* ‘YACOY’ exhibits a mounding habit.
2. *Antirrhinum* ‘YACOY’ exhibits short internodes.
3. *Antirrhinum* ‘YACOY’ exhibits large orange and yel-
low flowers.
4. *Antirrhinum* ‘YACOY’ is propagated by tip cuttings.
5. *Antirrhinum* ‘YACOY’ is 25 cm. in height and 35 cm.
in width at maturity.
6. *Antirrhinum* ‘YACOY’ is suitable for use as a container
or patio plant.
7. *Antirrhinum* ‘YACOY’ is hardy to 10° Centigrade.

BRIEF DESCRIPTION OF THE DRAWINGS

The accompanying color drawings illustrate the overall
appearance of the new cultivar ‘YACOY’ showing the colors
to be as true as is reasonably possible to obtain, in colored
reproductions of this type. Colors in the drawings may differ
from the color values cited in the detailed botanical
description, which accurately describe the actual colors of
the new variety ‘YACOY’.

The drawing labeled as FIG. 1 illustrates the plant from a
side perspective.

The drawing labeled as FIG. 2 illustrates a close-up view
of the flower. The drawings were made using conventional
photographic techniques and although foliage color may
appear different from actual colors due to light reflectance,
they are as accurate as possible by conventional photogra-
phy.

BOTANICAL DESCRIPTION OF THE PLANT

The following is a detailed description of the new cultivar
‘YACOY’ as grown in a one-liter container under green-
house conditions in Encinitas, Calif. Phenotypic differences
may be observed with variations in environmental, climatic,
and cultural conditions. The color determinations are in
accordance with The Royal Horticultural Society Colour
Chart (2001) except where general color terms of ordinary
dictionary significance are used. There are no special grow-
ing requirements or growing problems known to the inven-
tor.

Botanical classification: *Antirrhinum* 'YACOY'.

Species: *majus*.

Common name: Snapdragon.

Use: Container or patio plant.

Parentage: 'YACOY' is a hybrid plant that resulted from induced cross-pollination of the female and male parent plants. The male and female parents are unintroducted *Antirrhinum* hybrids from the inventors breeding program.

Female parent plant.—*Antirrhinum majus*.

Male parent plant.—Unnamed *Antirrhinum* hybrid.

Propagation: Tip cuttings.

Vigor: Vigorous.

Type: Annual.

Plant dimensions: 16 cm. in height and 28 cm. in width in a one-liter container.

Quantity of flowers: 25 flowers on a one-litre container plant.

Quantity of buds: 30 buds on a one liter-container plant.

Root system: Fibrous.

Diseases and pests: No known pests or diseases.

Plant habit.—Mounding.

Cropping time.—8 weeks are needed to produce a finished commercial 4-inch container.

Time to develop roots.—10 days are needed to develop roots on an initial cutting.

Temperature to develop roots.—17–20° Centigrade.

Seasonal interest.—Flowers in winter, spring and summer.

Hardiness.—10° Centigrade.

Sunlight requirements.—Normal.

Soil requirements.—Free-draining nursery compost or peat.

Stem:

Stem shape.—Cylindrical.

Stem color.—144B.

Stem dimensions.—6–7 cm in length by 2 mm in diameter.

Internode length.—1.25 cm between nodes.

Stem surface.—Glabrous.

Branching habit.—Basal branching.

Foliage:

Leaf arrangement.—Opposite.

Leaf division.—Simple.

Shape.—Lanceolate.

Base.—Cuneate.

Apex.—Acute.

Venation pattern.—Parallel with one prominent mid-vein.

Vein color (abaxial and adaxial surfaces).—138B.

Margins.—Entire.

Leaf surfaces (abaxial and adaxial).—Glabrous.

Leaf color (adaxial surface).—137B.

Leaf color (abaxial surface).—138B.

Leaf dimensions (mature leaves).—4 cm. in length and 1.25 cm in width.

Leaf dimensions (young leaves).—9 mm. in length and 6 mm. in width.

Leaf fragrance.—Grass-like.

Attachment.—Petiolate to sessile.

Petiole shape.—Oval in cross section.

Petiole dimensions (mature leaves).—6 mm in length and 1.5 mm. in width.

Petiole dimensions (young leaves).—4 mm. in length and 1 mm. in width.

Petiole color.—138B.

Petiole surface.—Pubescent.

Flower:

Inflorescence.—Terminal raceme.

Flower type.—Solitary in leaf axis.

Aspect.—Outward and upward.

Flower shape.—Bilabiate.

Flower dimensions.—4 cm. in height, 3 cm. in depth and 2.75–3 cm. in width.

Flower color.—13A, 43C and 185D are each individually present.

Bud shape.—Obovate.

Bud color.—42A.

Bud dimensions.—Bud dimensions range from 1.25 cm. in length and 0.50 cm. in width, to 1.75 cm. in length and 1 cm. in width.

Bud surface.—Pubescent.

Number of lips.—Two.

Upper lip dimensions.—1.50 cm. in height and 3.75 cm. in width.

Lower lip dimensions.—2 cm. in height and 3 cm. in width.

Palate dimensions.—1.50 cm. in width and 1.50 cm. in height.

Palate surfaces (outside).—Glabrous.

Palate surface (underside).—Pubescent.

Lobes (upper lip).—Two erect lobes.

Lobes (lower lip).—Three spreading lobes.

Margins (upper lip).—Slightly ruffled.

Margins (lower lip).—Slightly ruffled.

Palate color.—13A.

Lip surfaces (upper and lower).—Glabrous.

Upper lip color (adaxial surface).—43C and 13A are both individually present on an individual flower.

Upper lip color (abaxial surface).—185D.

Lower lip color (adaxial surface).—43C.

Lower lip color (abaxial surface).—185D.

Corolla tube mouth.—Closed at mouth and saccate at base.

Corolla tube surfaces (inside and outer surfaces).—Glabrous.

Corolla tube color (inside surface).—155B.

Corolla tube color (outer surface).—43C.

Corolla tube depth.—2.50 cm. in depth.

Flowering season.—Winter, spring and summer.

Flowering time.—Diurnal.

Pedicel dimensions.—8 mm. in length and 1.5 mm. in width.

Pedicel shape.—Cylindrical.

Pedicel surface.—Pubescent.

Pedicel color.—138B.

Calyx color.—138B.

Number of sepals.—Five sepals in number.

Sepal color (adaxial and abaxial surfaces).—138B.

Sepal surface.—Pubescent.

Sepal shape.—Ovate.

Fused or unfused.—Basally fused.

Sepal dimensions.—7 mm. in length and 4 mm. in width.

Sepal apex.—Acute.

Flower fragrance.—Sweet candy fragrance.

Reproductive organs:

Nectary surface (underside of palate).—Lanate.

Nectary color.—2C.

Stamens.—4 in number.

Stamen shape.—Filament.

Stamen color.—N155B.

5

Stamen dimensions.—Two are 17 mm. in length and 1 mm. in width, and two are 15 mm. in length and 1 mm. in width.
Anther dimensions.—3 mm. in length and 2 mm. in width.
Anther shape.—Oval.
Anther color.—7 A.
Quantity of pollen.—Large amount.
Color of pollen.—7A.
Pistil.—One in number.
Pistil color.—N155B.
Pistil dimensions.—15 mm. in length and 1 mm. in width.
Pistil shape.—Club shaped.

6

Stigma dimensions.—3 mm. in length and 2 mm. in width.
Stigma color.—149A.
Ovary position.—Superior.
Ovary color.—149A.
Ovary shape.—Cone shaped.
Ovary dimensions.—2 mm. in length and 3 mm. in width.
Ovary surface.—Mesic.
Seed: No seed observed to date.
It is claimed:
1. A new and distinct cultivar of *Antirrhinum* plant named ‘YACOY’ as described and illustrated.
