patent is extended or adjusted under 35
U.S.C. 154(b) by 46 days.

(57) **ABSTRACT**

Hybrid tea rose plant substantially as herein shown and
described, characterized particularly by its red and silvery-
white flowers and its good bud-to-stem ratio.

(22) Filed: **Oct. 27, 2004**

1 Drawing Sheet

1

Genus and species: *Rosa hybrida*.
Varietal denomination: 'TAN01994'.

SUMMARY OF THE INVENTION

The present invention relates to a new and distinct variety
of hybrid tea rose plant for cut flower production, which was
discovered by me as a spontaneous, natural mutation of the
rose variety Tan99065 growing in a greenhouse in Uetersen,
Germany.

BRIEF SUMMARY OF THE INVENTION

This mutant has an attractive bi-colored flower and has a
good bud-to-stem ratio.

Asexual reproduction of this new variety by cuttings, as
performed at Uetersen, Germany, shows that the foregoing
and all other characteristics and distinctions come true to
form and are established and transmitted through succeeding
propagations.

COMPARISON WITH PARENT

The parent plant, TAN099065, has red flowers whereas
the petals of TAN01944 are red on their upper surfaces and
silvery-white on their lower surfaces.

BRIEF DESCRIPTION OF THE ILLUSTRATION

The accompanying illustration shows typical specimens
of flowers of this new variety depicted in color as nearly true
as it is reasonably possible to make the same in a color
illustration of this character.

DETAILED BOTANICAL DESCRIPTION

The following is a detailed description of my new rose
cultivar with color descriptions using terminology in accor-
dance with The Royal Horticultural Society (London)
Colour Chart (1966), except where ordinary dictionary sig-
nificance of color is indicated.

Parent: TAN099065 (Plant patent application Ser. No.
10/282,787, filed Oct. 28, 2002).

2

Classification:

Botanical.—*Rosa hybrida*.

Commercial.—Hybrid Tea.

FLOWER

Observations made from plants of two years of age grown
in a greenhouse environment at Uetersen, Germany.

Blooming habit: Continuous.

Bud:

Size.—About 2.7 cm long and 2.4 cm in diameter when
the petals start to unfurl.

Form.—The bud form is blunt.

Color.—When sepals first divide, bud color is Silvery-
White Group 155D. When half blown, the upper
sides of the petals are Red Group 46A; and the lower
sides of the petals are White Group 155A.

Sepals.—Color: Upper Surface: Green Group 144A.
Lower Surface: Green Group 144C. Length: 3.4 cm.
Width: 0.6 cm. Shape: Pointed-elongate. Surface
texture: Rough. There are three normally append-
aged sepals. There are five unappendaged sepals
with serrated edges.

Receptacle.—Color: Green Group 144C. Shape: Fun-
nel. Size: Medium, about 0.4 cm by 0.4 cm. Surface:
Smooth.

Peduncle.—Length: About 5.7 cm. Surface: Smooth.
Color: Green Group 144A. Strength: Erect.

Bloom:

Size.—Large. Average open size is about 8.6 cm.

Borne.—Singly.

Stems.—Strength: Normal. Average length is about 60
cm and 0.3 cm in diameter.

Form.—When first open: Flat. Permanence: Retains its
form to the end, outer petals curl back.

Petalage.—Number of petals under normal conditions:
39.

Color.—The upper sides of the petals are Red Group
46A. The reverse sides of the petals are White Group
155A. The base of each petal has a Yellow Group

14D spot. The major color on the upper side is Red Group 46A.

Variations.—None.

Discoloration.—The general tonality at the end of the first day: Red Group 46A, and at the end of the third day: Red Group 46A.

Fragrance.—None.

Petals:

Texture.—Leathery.

Surface.—Rough.

Shape.—Oval.

Size.—Width: 5.2 cm. Length: 4.5 cm.

Margin.—Smooth. Apex Shape: Pointed. Base Shape: Blunt.

Form.—Edges slightly quilled.

Arrangement.—Irregular.

Petaloids.—Number 22. Color: Same as petals.

Persistence.—Petals hang on and dry.

Lastingness.—On the plant: Long, about 17 days. As a cut flower: Long, about 15 days.

Reproductive parts:

Stamens.—Number: 83. Length: 0.4 cm. Anthers: Length: 0.1 cm. Color: Yellow-Orange Group 22A.

Arrangement: Regular around styles. Filaments:

Color: Yellow-Orange Group 22B. Length: 0.3 cm.

Pollen: Color: Yellow-Orange Group 21A.

Pistils.—Number: 112. Length: 4 cm. Styles: Color: Red Group 43A. Length: 0.3 cm. Stigmas: Color:

Yellow-Orange Group 22A. Length: 0.1 cm.

Hips.—None produced.

PLANT

Form.—Pillar.

Growth.—Vigorous.

Mature plant.—Height: 80 cm at 2 years. Width: 40 cm.

Rootstock.—*Rosa canina*.

Foliage: Number of leaflets on normal mid-stem leaves: 5.

Size.—Medium (12.2 cm long×8.2 cm wide).

Quantity.—Normal.

Color.—New foliage: Upper side: Green Group 139A.

Lower side: Green Group 137B. Old foliage: Upper

side: Green Group 139A. Lower side: Green Group 137B.

Leaflets:

Size.—About 8.2 cm long×4.5 cm wide.

Shape.—Pointed oval.

Base shape.—Blunt.

Apex shape.—Pointed.

Texture.—Upper side: Smooth.

Edge.—Serrated.

Serrations.—Single.

Petiole.—Color: Green Group 137A.

Petiole rachis.—Color: Green Group 139B. Underside: Smooth.

Stipules.—Length: 1.1 cm, smooth.

Auricles.—Number: 2. Length: 0.2 cm. Shape: Pointed.

Disease resistance.—Not tested.

Pest resistance.—Not tested.

Vein color.—Green Group 144A.

Venation pattern.—Pyramidal.

Wood:

New wood.—Color: Green Group 144A. Bark: Smooth.

Old wood.—Color: Brown Group 183A. Bark: Rough.

Prickles:

Quantity.—On main canes from base: 16 per 60 cm stem. On laterals from main canes: 1 per 20 cm.

Form.—Hooked downward.

Length.—0.5 cm.

Color when young.—Purple Group 185A.

Color when mature.—Purple Group 177A.

Small prickles:

Quantity.—On main stalks: 15 per 30 cm length. Color:

When young: Green Group 146C. When mature:

Grey-Orange Group 177A.

Winter hardiness: Not tested.

I claim:

1. A new and distinct variety of rose plant of the hybrid tea class, substantially as herein shown and described, characterized particularly by its red and silvery-white flowers and its good bud-to-stem ratio.
