(57) **ABSTRACT**

A new and distinct cultivar of rose plant named ‘Evera 116’,
characterized by its upright, compact and rounded plant
habit; dark green-colored leaves; large double yellow-
colored flowers; flowers held upright on strong and erect
peduncles; and good postproduction longevity.

1 Drawing Sheet

1

Botanical designation: *Rosa hybrida*.
Cultivar denomination: ‘Evera 116’.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar
of the Rose class, botanically known as *Rosa hybrida*,
commercially known as a potted Rose and hereinafter
referred to by the name ‘Evera 116’.

The new Rose plant is a product of a planned breeding
program conducted by the Inventor in Denmark. The objec-
tive of the breeding program was to develop new potted
Rose cultivars with novel and attractive flower colors,
disease resistance and excellent postproduction longevity.

The new Rose plant originated from a cross-pollination
made by the Inventor on Apr. 1, 2002 of two unnamed
proprietary *Rosa hybrida* seedlings, not patented. The cul-
tivar Evera 116 was discovered and selected by the Inventor
as a flowering plant within the progeny of the stated cross-
pollination in a controlled environment in Denmark. Plants
of the new cultivar differ primarily from plants of the parent
selections primarily in flower color.

Asexual reproduction of the new Rose plant by cuttings in
Denmark since Dec. 1, 2003, has shown that the unique
features of this new Rose plant are stable and reproduced
true to type in successive generations of asexual reproduc-
tion.

SUMMARY OF THE INVENTION

The new Rose plant has not been observed under all
possible environmental conditions. The phenotype may vary
significantly with variations in environment such as tem-
perature and light level, without, however, any variance in
genotype.

The following traits have been repeatedly observed and
are determined to be the unique characteristics of ‘Evera
116’. These characteristics in combination distinguish the
new Rose plant as a new and distinct cultivar:

1. Upright, compact and rounded plant habit.
2. Dark green-colored leaves.
3. Large double yellow-colored flowers.

2

4. Flowers held upright on strong and erect peduncles.
5. Good postproduction longevity.

Plants of the new Rose plant can be compared to plants of
the Rose cultivar Pink Ever, not patented. In side-by-side
comparisons conducted in Denmark, plants of the new Rose
differed from plants of the cultivar Pink Ever in the follow-
ing characteristics:

1. Plants of the new Rose were more compact than plants
of the cultivar Pink Ever.
2. Flowers of plants of the new Rose had fewer petals than
flowers of plants of the cultivar Pink Ever.
3. Plants of the new Rose and the cultivar Pink Ever
differed in flower coloration.

BRIEF DESCRIPTION OF PHOTOGRAPHS

The accompanying colored photographs illustrate typical
specimens of the vegetative growth and flowers of the new
Rose plant, showing the colors as true as it is reasonably
possible to obtain in colored reproductions of this type.
Colors in the photographs may differ slightly from the color
values cited in the detailed botanical description which more
accurately describe the actual colors of the new Rose plant.

The photograph at the top of the sheet comprises a side
perspective view of typical plants of the new Rose plant
grown in a container in Denmark.

The photographs at bottom of the sheet comprises close-
up views of the upper (left) and lower (right) surfaces of
typical flowers and leaves of the new Rose plant.

DETAILED BOTANICAL DESCRIPTION

The following observations and measurements describe
plants grown in Denmark in 10.5-cm containers in a glass
greenhouse and under conditions which closely approximate
commercial production conditions during the summer.
Plants used for the description were about 15 weeks old. In
the following description, color references are made to The
Royal Horticultural Society Colour Chart, 1995 Edition,
except where general terms of ordinary dictionary signifi-
cance are used.

Classification:

Botanical.—*Rosa hybrida* cultivar Evera 116.

Commercial.—Potted Rose.

Parentage:

Female, or seed, parent.—Unnamed proprietary seedling, not patented.

Male, or pollen, parent.—Unnamed proprietary seedling, not patented.

Propagation:

Type.—Terminal or stem cuttings.

Time to rooting.—8 to 10 days with soil temperatures of 20° C.

Root description.—Fine; freely branching.

Plant description:

Form.—Upright, compact and rounded plant habit.

Plant height.—About 20 cm.

Plant width.—About 20 cm.

Growth habit.—Moderately vigorous; suitable for 10.5-cm containers.

Stem description.—Branching habit: About three lateral branches per plant. Lateral branch length: About 16 to 19 cm. Lateral branch diameter: About 4 mm. Internode length: About 2 to 2.5 cm. Texture: Smooth, glabrous. Color: 137D. Thorns: Quantity: Sparse. Length: About 2 to 6 mm. Diameter: About 2 to 6 mm. Shape: Roughly deltoid. Color, mature: 162D.

Foliage description.—Arrangement: Alternately; compound with typically three to five leaflets per leaf, generally symmetrical. Leaf length: About 8 cm to 9 cm. Leaf width: About 7 cm. Leaflet length: About 2 to 5 cm. Leaflet width: About 1.5 to 3.3 cm. Shape: Ovate. Apex: Acuminate. Base: Obtuse. Margin: Serrulate. Venation pattern: Pinnate; reticulate. Texture, upper and lower surfaces: Smooth, glabrous; leathery. Petiole length: About 2.5 to 3 cm. Petiole diameter: About 1 mm. Petiole texture, upper and lower surfaces: Smooth, glabrous. Color: Developing foliage, upper surface: 137A. Developing foliage, lower surface: 147B. Fully expanded foliage, upper surface: Between 139A and 147A. Fully expanded foliage, lower surface: Closest to 147B. Venation, upper surface: 146B. Venation, lower surface: 146D. Petiole, upper and lower surfaces: 146B. Stipules: Shape: Lanceolate; apex, acuminate; base, truncate; margin, serrate. Length: About 5 mm. Width: About 1 mm. Texture, upper and lower surfaces: Leathery, smooth. Color, upper surface: Closest to 147A. Color, lower surface: Closest to 147B.

Flower description:

Flower type and habit.—Large double yellow-colored flowers. Consistently symmetrical rosette flowers

that are hemispherical in shape. Flowers borne singly on erect and strong peduncles; about two to six flower buds and flowers per lateral branch. Flowers persistent.

Flowering season.—Year-round under greenhouse conditions, optimal flowering from spring through autumn under garden conditions; flowering intermittent.

Flower diameter.—About 5 to 7.5 cm.

Flower depth (height).—About 2.5 to 3 cm.

Flower longevity on plant.—About two weeks.

Fragrance.—Slight; typical of *Rosa*.

Flower buds (at stage of showing color).—Shape:

Ovoid. Length: About 2.5 cm. Diameter: About 1 cm. Color: 137C.

Petals.—Quantity: About 35 per flower. Length: About 2 to 4 cm. Width: About 1.3 to 5 cm. Shape: Broadly obovate. Apex: Rounded; retuse. Base: Attenuate. Margin: Entire. Texture, upper and lower surfaces: Smooth, glabrous; satiny. Color: When opening, upper and lower surfaces: 7C; color becoming closer to 7B to 7C with development. Fully opened, upper and lower surfaces: 7B to 7C.

Sepals.—Quantity per flower: Typically five. Calyx length: About 3.5 cm. Calyx diameter: About 9 mm. Shape: Linear; falcate. Apex: Sharply pointed. Base: Truncate. Texture, upper and lower surfaces: Pubescent. Color, upper and lower surfaces: Close to 137A.

Peduncles.—Strength: Strong, but flexible. Aspect: Mostly erect. Length: About 5 cm. Diameter: About 4 mm. Texture: Smooth, glabrous. Color: 144A.

Reproductive organs.—Stamens: Quantity: About 90 per flower. Anther length: About 3 mm. Anther shape: Oval. Anther color: 163A. Pollen: Yellowish. Pistils: Quantity: About 50 per flower. Pistil length: About 6 mm. Stigma color: 145B. Style color: 145D. Receptacle shape: Cup-like. Receptacle size: About 8 mm by 6 mm. Receptacle texture: Smooth, glabrous. Receptacle color: Closest to 144A.

Seed/fruit.—Seed and fruit production has not been observed.

Disease/pest resistance: Plants of the new Rose have not been shown to be resistant to pathogens and pests common to Rose plants.

Temperature tolerance: Plants of the new rose have been shown to be tolerant to temperatures from 0 to 45° C.

It is claimed:

1. A new and distinct rose plant named 'Evera 116', as illustrated and described.
