ABSTRACT (57)

A new cultivar of *Peperomia* plant named 'Dapep2106' that is characterized by an upright habit, large glossy green leaves, a strong stem and a long plant life.

1 Drawing Sheet

Botanical classification: Peperomia obtisufolia. Variety denomination: 'Dapep2106'.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar of *Peperomia* plant botanically known as *Peperomia obtisu*folia and hereinafter referred to by the cultivar name 'Dapep2106'.

'Dapep2106' was discovered as a seedling growing in a bed of *Peperomia*. The exact female and male parents are unknown. The cultivar 'Dapep2106' was selected by the inventor in March of 2003 as a single plant in a cultivated area of Melsen-Merelbeke, Belgium.

Asexual reproduction of the new cultivar 'Dapep2106' by leaf cuttings was first performed in 2003 in Melsen-Merelberke, Belgium. Since that time, under careful observation, the unique characteristics of the new cultivar have been uniform, stable and reproduced true to type in successive generations of asexual reproduction.

SUMMARY OF THE INVENTION

The following represent the distinguishing characteristics of the new *Peperomia* cultivar 'Dapep2106'. These traits in combination distinguish 'Dapep2106' as a new and distinct cultivar.

- 1. Peperomia 'Dapep2106' exhibits an upright habit.
- 2. Peperomia 'Dapep2106' exhibits large glossy green leaves.
- 3. Peperomia 'Dapep2106' exhibits a strong stem.
- 4. Peperomia 'Dapep2106' exhibits a long plant life.

The closest comparison cultivar are plants of the *Pepero*mia obtisufolia species. 'Dapep2106' is distinguishable from plants of the *Peperomia obtisufolia* species by the following characteristics:

- 1. 'Dapep2106' has larger leaves.
- 2. 'Dapep2106' has a longer plant life.
- 3. 'Dapep2106' has glossier leaves.
- 4. 'Dapep2106' has an upright habit.
- 5. 'Dapep2106' has a stronger stem.

BRIEF DESCRIPTION OF THE DRAWING

The accompanying photograph illustrates the distinguishing traits of *Peperomia* 'Dapep2106'. The plant in the photograph shows an overall view of a 6 month old plant. The photograph was taken using conventional techniques and although colors may appear different from actual colors due to light reflectance it is as accurate as possible by conventional photographic techniques.

BOTANICAL DESCRIPTION OF THE PLANT

The following is a detailed description of the new *Pep*eromia cultivar named 'Dapep2106'. Data was collected in Melsen-Merelbeke, Belgium from 6 month old glass green-15 house grown plants in 17 cm. containers. The time of year was Summer and the average daytime and nighttime temperatures were 19° Centigrade. The light level was natural outdoor light and there were no photoperiodic treatments. Color determinations are in accordance with The Royal Horticultural Society Colour Chart 2001 edition, except where general color terms of ordinary dictionary significance are used. The growing requirements are similar to the species. 'Dapep2106' has not been tested under all possible conditions and phenotypic differences may be observed with 25 variations in environmental, climatic, and cultural conditions, however, without any variance in genotype.

Botanical classification: Peperomia obtisufolia 'Dapep2106'.

³⁰ Use: Ornamental Perennial.

Parentage: The parents of 'Dapep2106' are unknown.

Vigor: Moderate.

Growth rate: Approximately 12 cm. per month.

Growth habit: Narrow upright.

³⁵ Plant shape: Inverted triangle.

Suitable container size: 10.5 cm. container.

Height: Average 59.0 cm. in height.

Width: Average 35.6 cm. in width.

Hardiness: Zone 10.

40 Propagation: Cuttings.

Time to initiate roots: Approximately 21-28 days to produce roots on an initial cutting.

Time to produce a rooted cutting or liner: Approximately 56 days.

Root system: Fine and fibrous.

Stem: Flowering season.—Autumn. Branching habit.—Moderate. Rate of flower opening.—Approximately 75% of the Average number of lateral branches: 6. flowers are opened at one stage. *Pinching.*—No. Fragrance.—None. Lateral branch diameter.—1.0 cm. in diameter. Flower bud length.—0.5 mm. in length. Flower bud diameter.—0.5 mm. in diameter. Lateral branch length.—30.2 cm. in length. Lateral branch color.—143A to 144A. Flower bud shape.—Flattened. Bud color.—193A. Lateral branch strength.—Strong. Stem color.—143A to 144A. Rate of bud opening.—2 days per bud, 7 days per spike. Pubescence.—Absent. *Flower aspect.*—Upright to slightly outward. Internode length.—5.6 cm. between nodes. Flower shape.—Individual flowers consist of two sta-Shape.—Rounded. mens fused to form a single anther and a single pistil. Flower dimensions.—Average 0.7 mm. in diameter and Surface.—Glossy. 0.3 mm. in height. Stem strength.—Strong. Foliage: Flower longevity.—Lasts approximately 14 days on *Texture*.—Glossy. plant. Self-cleaning or persistent.—Persistent. Leaf arrangement.—Alternate. Compound or single.—Single. *Bracts.*—Absent. Quantity of leaves per lateral branch.—7. Peduncle: *Leaf shape.*—Cordate. Peduncle length.—7.7 cm. Peduncle diameter.—4 mm. *Leaf apex.*—Apiculate. *Peduncle angle.*—30° from vertical. *Leaf base.*—Cordate. Leaf length.—13.5 cm. in length. *Peduncle strength.*—Moderate. Leaf width.—12.2 cm. in width. *Peduncle color.*—152A to 152B. *Pubescence*.—Absent. Pedicels: Pedicel length.—4.5 mm. Leaf margin.—Entire. Pedicel diameter.—3 mm. Vein pattern.—Camptodrome. Pedicel angle.—30° from vertical. Young leaf color (upper surface).—143A. Young leaf color (lower surface).—143C to 144A. *Pedicel strength.*—Moderately weak. Pedicel color.—143B. Mature leaf color (upper surface).—139A. Mature leaf color (lower surface).—146B. Reproductive organs: Stamen number.—2 stamen fused into one anther. Vein color (lower surface).—146B. Vein color (upper surface).—144A to 144B. Anther shape.—Kidney shaped. *Leaf attachment.*—Petiolate. Anther size.—0.3 mm in length. Petiole dimensions.—8.1 cm. in length and 4.5 mm. in Anther color.—161D. Amount of pollen.—High. diameter. Petiole color.—144A. Pollen color.—157A. Durability of foliage to stress.—Moderate. Pistil number.—1. Pistil dimensions.—1.1 mm. in length. Flower: Flower arrangement.—Stalked terminal spikes. Stigma shape.—Clavate. Stigma color.—192C. *Inflorescence type.*—Spike. Style length.—0.2 mm. *Inflorescence dimensions.*—16.8 cm. in diameter and 15.9 cm. in height. Style color.—192C. Flowering habit.—Continuously. Ovary color.—192C. Seed: Seed production has not been observed. Quantity of spikes per inflorescence.—Approximately Disease and pest resistance: Plants of the new *Peperomia* 10. Quantity of flowers per spike.—Approximately 1500. have not been observed for disease or pest resistance. Quantity of flower buds per spike.—Approximately It is claimed: 1500.

Quantity of flowers and buds per plant.—

Approximately 75,000.

1. A new and distinct variety of *Peperomia* plant named 'Dapep2106' as described and illustrated.
