(57) **ABSTRACT**

A new and distinct variety of peach tree is characterized by
producing a freestone fruit with good red coloration, and that
is ripe for commercial harvesting and shipment between July
13–20 in the San Joaquin Valley of Central California. The
new variety is closely similar to the ‘O’Henry’ peach tree
(nonpatented) from which it is a bud sport and from which
it is distinguishable in that the fruit matures earlier than the
‘O’Henry’ peach fruit, is more highly colored, has very good
flavor and stores very well.

1 Drawing Sheet

1

Latin name of the genus and species: The peach cultivar
of this invention is botanically identified as *Prunus persica*.
Variety denomination: The variety denomination is
‘GP45-11’.

BACKGROUND OF THE INVENTION

During the continued efforts to improve the quality of
available fruit for the consumer, the inventor discovered a
bud sport of the O’Henry/Peach variety (U.S. Plant Pat. No.
2,964) on a block of peaches in August of 1999. The bud
sport was taken from one tree. After reexamining the fruit in
2000, budwood was collected and budded on to ‘Nema-
guard’ rootstock in the dormant season of 2000/2001 on
current site, which is on the west side of the Central San
Joaquin Valley, approximately 3½ miles south of Kerman,
Calif. Enough trees (11,403) of this invention were asexually
reproduced to plant 59–66 acres. The resulting fruit pro-
duced in this planting produced highly colored fruit, with
very good size, two weeks before the ‘O’Henry’ variety. In
addition this fruit is very juicy with good flavor. The fruit
produced in all respects is identical to the original bud sport.

ORIGIN AND ASEXUAL REPRODUCTION

The present invention (variety) was discovered in an
‘O’Henry’ peach planting in August of 1999 on the west side
of Madera Avenue, approximately 3½ miles south of the
town of Kerman, Calif. in the San Joaquin Valley of Central
California. The new variety was asexually reproduced in the
dormant season of 2000/2001 by bud grafting on ‘Nema-
guard’ rootstock. Enough trees were asexually reproduced to
plant 59–66 acres of the new variety. The inventor carefully
compared the asexually reproduced trees with the parent
sport, including the fruit, and found they were identical in all
respects.

2

BRIEF SUMMARY OF THE INVENTION

The ‘GP45-11’ peach is characterized by producing a
large freestone fruit that has good blush coloration and is
ripe for commercial harvesting and shipping around July
13–20 in a normal year in the San Joaquin Valley of Central
California. This new variety is a large fruit with a red blush
and yellow flesh with red flecks. It is most similar to the
‘O’Henry’ peach tree (nonpatented) from which it is a bud
sport. However, it is distinguishable in that it ripens approxi-
mately two weeks before the ‘O’Henry’ variety. The fruit of
this new variety is large, with good flavor and good red
color, which makes it quite acceptable to the consumer.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 illustrates, clockwise from top left: the front and
back of whole leaves, whole leaves on a twig from a twig
end, top, bottom and side views of the fruit displaying the
characteristic skin color and shape, fruit cut in half display-
ing the flesh, pit cavity and pit in place, and pit.

**DETAILED DESCRIPTION OF THE
INVENTION**

Referring more specifically to the horticultural details of
the new and distinct variety of peach tree, the following
descriptions have been observed under the ecological con-
ditions prevailing at the origin orchard, which is located near
Kerman, Calif. in the San Joaquin Valley of Central Cali-
fornia. All major color designations are by reference to the
“Dictionary of Color” by Maerz and Paul, First Edition,
published in 1930. Common colors are also employed.

Tree:

Size.—Medium, for 3rd leaf tree, 10–11 feet high, 8–9 feet width.

Vigor.—Very good.

Shape.—Upright and spreading.

Productivity.—Very good to excellent for 3rd leaf tree with regular bearing.

Chilling requirements.—Normal weather factors, including temperatures and rainfall at that time of year, for peach trees in the Central San Joaquin Valley in California.

Trunk:

Size.—Medium — 15 inches in circumference, 12 inches above ground.

Surface texture.—Moderately rough.

Color code.—PL.56 E8 Burgundy.

Lenticels.—Scattered — moderate number.

Size.—Small — 0.04 inch.

Branches:

Size.—Medium, circumference 7 inches, 17 inches above crotch-angle of branches approximately 60°.

Surface texture.—Mature — nearly smooth. Immature — smooth.

Color code (1 year or older).—Pl.1.7 E9—Kaffa, Hamstead Brown.

Color code (immature).—Pl.1.20 K6 — Piquant green.

Lenticels.—Number — sparse. Size — small — less than 0.04 inch.

Leaves:

Size.—Medium-large.

Length.—6.65–7.72 inch.

Width.—1.18–1.89 inch.

Shape.—Lanceolate.

Color code.—Upwardly disposed surface — Pl.24 C10 — Shirvan. Downwardly disposed surface — Pl.22 L7 — Art. Green.

Marginal form.—Crenate.

Leaf vein.—Color code — Pl.19 L5 — Cosse gr. Thickness — 0.04 inch.

Glandular characteristics.—None.

Petiole.—a. Size — medium. b. Length — 0.39–0.55 inch. c. Thickness — 0.08 inch. d. Color Code — Pl. 19 D6 — Pistachio gr. or Pistache.

Stem glands.—Form — reniform. Postioin — 1 long gland on left, 0.16 inch and 2 on right, 0.04–0.08 inch. Color Code — Pl.6 E9 Near Cameo Br.

Stipules.—One 0.08 inch Pl.7 J12 — Chutney.

Flowers:

Blooms per cluster.—Approximately three (3) to four (4) flowers in a cluster.

Flower buds.—Conic shape. Color Code — Pl.1 C4 Sweet Bryer.

Date of first bloom.—50% — Feb. 26, 2005 — showy, abundant.

Calyx.—5 sepals. Color Pl.7 L6 India Red.

Flower diameter size.Large — 1.65–1.8 inch.

Petal shape.—Obovate, minor overlapping.

Petals.—5. Size — Length — 0.78–0.82 inch. Width — 0.75–0.98 inch.

Color.—Pl.1 C1 Light Pink.

Claws.—Small — 0.08 inch.

Petal margins.—Undulate.

Pedicel.—0.12 inch — Color — Pl.19 L6 Calliste green.

Sepals.—Size — 0.20 inch to 0.26 inch.

Stamen.—33–38. Average Number of Stamens — 36. Average Length of Stamens — 0.48 inch.

Filament.—Color — Pl.1 J8 Geranium Pink. Length — 0.35–0.67 inch.

Anthers.—Small — Color — Pl.7 H9 Liver Br.

Pistil.—0.91 inch.

Fertility.—Self fertile — no pollinator required.

Pollen.—Color — yellow gold Pl.9 L3.

Fruit:

Average weight of fruit.—198.8 grams (70 oz.).

Date of maturity.—July 13–20.

Size.—Diameter Axial Plane — 2.40–3.03 inches.

Transverse in Suture Plane — 2.64–2.87 inches.

Transverse at Right Angles to Suture Plane — 2.40–2.56 inches.

Form.—Symmetrical or Asymmetrical — slightly asymmetrical. Suture — slightly on ventral side, more prominent on distal side. Ventral Surface — smooth.

Stem cavity.—Width — 0.51–0.98 inch. Depth — 0.39–0.83 inch. Length — 1.10–1.38 inch. Shape — ovate.

Stem.—Length 0.31–0.39 inch. Caliper — 0.16 inch.

Apex.—Rounded.

Pistil point.—Very small and not prominent.

Skin.—Thin — normal for freestone peach.

Texture.—Lightly pubescent.

Ovary.—Bare.

Tendency to crack.—None known.

Color code.—Blush Color — Pl.41 L6 — shade of red.

Ground Color — Pl.11 L3 Canary, Quince Y. Flesh

color — Pl.11 L5 Lime Y with Red Flesh (Pl.49 L7)

Indiana. Color of Surface or Pit Near Pit Cavity —

Pl.49 L7 Indiana. Color of Pit Well — Pl.49 H5 —

Valencia.

Juice production.—Moderate.

Flavor.—Very good.

Aroma.—Mild.

Pit cavity fibers.—Numerous on both sides of pit cavity — total approximately 30.

Texture.—Somewhat stringy.

Ripening.—Even.

Eating quality.—Very good.

Stone:

Free or cling.—Freestone.

Pit fibers.—Numbers — few. Length — short, 0.12–0.16 inch.

Size.—Length — 1.18 inch. Width — 0.98 inch. Thickness — 0.79 inch.

Form.—Ovate.

Hilum.—0.20 inch.

Apex shape.—Slightly rounded.

Color code (dry).—Pl.55 L8 Rubient.

Base.—Slightly rounded.

Sides.—Heavily grooved.

Ridges.—On both sides from apex to base.

Tendency to split.—Approximately 10 to 15% split ripe.

Use.—Fresh market.

Keeping and shipping quality.—Very good.

Resistance to disease.—Not known.

Harvesting.—Between July 13–20 in the San Joaquin Valley of Central California.

What is claimed is:

1. A new and distinct variety of peach tree having characteristics described and illustrated herein.

FIG. 1
