(57) **ABSTRACT**

A new *Calibrachoa* plant particularly distinguished by a  
compact to semi-trailing growth habit, blue flower color,  
very good outdoor performance and a floriferous flowering  
habit, is disclosed.

**1 Drawing Sheet**

**1**

Genus and species: *Calibrachoa* hybrid.  
Variety denomination. 'KLECA07112'.

**BACKGROUND OF THE NEW PLANT**

The present invention comprises a new and distinct culti-  
var of *Calibrachoa*, botanically known as *Calibrachoa*  
hybrid and hereinafter referred to by the cultivar  
name. 'KLECA07112'. The new cultivar originated from a  
hybridization made in summer of 2002 in Stuttgart, Ger-  
many. The female parent was the dark-blue-flowered propri-  
etary *Calibrachoa* plant 'KLEC02070' (unpatented), while  
the male parent was the violet-flowered proprietary *Calibra-  
choa* plant 'U 37' (unpatented).

The new cultivar was first propagated in May 2003 in  
Stuttgart, Germany and has been asexually reproduced by  
vegetative cuttings and tissue culture in Stuttgart, Germany  
over fifty generations. The present invention has been found  
to retain its distinctive characteristics through successive  
asexual propagations.

**SUMMARY OF THE INVENTION**

The following are the most outstanding and distinguishing  
characteristics of this new cultivar when grown under nor-  
mal horticultural practices in a greenhouse in Stuttgart, Ger-  
many.

1. Compact to semi-trailing growth habit;
2. Blue flower color;
3. Very good outdoor performance; and
4. A floriferous flowering habit.

**DESCRIPTION OF PHOTOGRAPH**

This new *Calibrachoa* plant is illustrated by the accompa-  
nying photograph which shows flowers and foliage of the  
plant; the colors shown are as true as can be reasonably  
obtained by conventional photographic procedures. The  
photograph is of a five-month-old *Calibrachoa* plant, grown  
in a greenhouse in Stuttgart, Germany, between January and  
May 2007.

**DESCRIPTION OF THE NEW CULTIVAR**

The following detailed descriptions set forth the distinc-  
tive characteristics of 'KLECA07112'. The data which  
defines these characteristics were collected from asexual  
reproductions carried out in Stuttgart, Germany. The plant  
history was taken on five-month-old plants which were  
planted as rooted cuttings in 11-cm pots between January  
and May 2007 and then grown in a greenhouse. The plants  
had one terminal pinch one week after potting. Color read-  
ings were taken under natural light. Color references, are  
primarily to the R.H.S. Colour Chart of The Royal Horticul-  
tural Society of London (R.H.S.) (2001).

### COMPARISON WITH PARENTAL AND COMMERCIAL CULTIVARS

‘KLECA07112’ differs from the female parent ‘KLEC02070’ (unpatented) by having a less vigorous and more compact plant habit than ‘KLEC02070’. Additionally, ‘KLECA07112’ has a blue flower color, while ‘KLEC02070’ has a dark-blue flower color.

‘KLECA07112’ differs from the male parent ‘U 37’ (unpatented) by having a blue flower color, while ‘U 37’ has a violet flower color.

‘KLECA07112’ differs from the commercial cultivar ‘Dancalmidblu’ (U.S. Plant Pat. No. 18,123) by having a blue flower color, while ‘Dancalmidblu’ has a violet-blue flower color.

I claim:

1. A new and distinct cultivar of *Calibrachoa* plant as shown and described herein.
