(57) **ABSTRACT**

A new and distinct *Guzmania* cultivar named ‘Durapau’ is
disclosed, characterized by large, decorative purple bracts,
and a straight, upright peduncle.

1 Drawing Sheet

1

Latin name of the genus and species: *Guzmania hybrida*.
Variety denomination: ‘Durapau’.

BACKGROUND OF THE INVENTION

The new cultivar is a product of a planned breeding pro-
gram. The new variety originated from a cross pollination of
an unnamed, unknown seed parent and an unnamed,
unknown pollen parent, both *Guzmania hybrida* made by the
inventor during 1998.

It was discovered by the inventor, Chester Skotak Jr., a
citizen of Costa Rica, in March 2001 in Ajauela, Costa Rica
in a group of seedlings resulting from the 1998 crossing.

Asexual reproduction of the new cultivar ‘Durapau’ was
first performed in Costa Rica by tissue culture in April 2003
‘Durapau’ has been reproduced by micro-propagation and
has shown that the unique features of this cultivar are stable
and reproduced true to type.

SUMMARY OF THE INVENTION

The cultivar ‘Durapau’ has not been observed under all
possible environmental conditions. The phenotype may vary
somewhat with variations in environment such as
temperature, day length, and light intensity, without,
however, any variance in genotype.

The following traits have been repeatedly observed and
are determined to be the unique characteristics of ‘Durapau’.
These characteristics in combination distinguish ‘Durapau’
as a new and distinct *Guzmania* cultivar:

1. Foliage resistant to stress.
2. Green foliage.
3. Very straight, dark purple inflorescence.
4. Suitability as an indoor pot plant.
5. Strap shaped leaves occurring in tight, regular whorls.

Plants of the new cultivar ‘Durapau’ cannot be compared
to either seed parent or pollen parent as records of those
characteristics were not kept. However, ‘Durapau’ can be
compared to the unpatented commercial variety *Guzmania*
‘El Cope.’ Plants of ‘El Cope’ are similar to plants of ‘Dura-
pau’ in most horticultural characteristics, however, ‘El Cope’
has a red inflorescence, while ‘Durapau’ has a purple inflo-
rescence. Additionally, ‘Durapau’ has a straighter inflores-
cence than ‘El Cope.’

2

BRIEF DESCRIPTION OF THE PHOTOGRAPH

The accompanying photograph in FIG. 1 illustrates in full
color a typical plant of ‘Durapau’ grown in a greenhouse.
This plant is approximately 18 months old, shown in a 13 cm
pot. The photograph was taken using conventional tech-
niques and although colors may appear different from actual
colors due to light reflectance it is as accurate as possible by
conventional photographic techniques.

DETAILED BOTANICAL DESCRIPTION

In the following description, color references are made to
The Royal Horticultural Society Colour Chart except where
general terms of ordinary dictionary significance are used.
The following observations and measurements describe
‘Durapau’ plants grown in a climate controlled greenhouse
in Evergem, the Netherlands. Temperatures ranged from 18°
C. to 22° C. at night to 18° C. to 22° C. during the day. No
artificial light, photoperiodic treatments or chemical treat-
ments were given to the plants. Measurements and numeri-
cal values represent averages of typical plant types.

Botanical classification: *Guzmania hybrida* cultivar ‘Dura-
pau.’

PLANT

Growth habit: Upright, forming compact rosettes around a
single axis. One straight, upright inflorescence arising
from the center of plant.

Plant shape: Inverted triangle.

Height: Approximately 14.3 cm.

Plant spread: Approximately 36.6 cm in a 13 cm pot.

Normal pot size: 13, 15, 18 cm.

Growth rate: Slow.

Branching characteristics: Upright, non-branching.

Number of leaves per stem: Approximately 17.

Age of plant described: Approximately 18 months.

FOLIAGE

Leaf:

Arrangement.—Whorled.

Average leaves per plant.—17 per rosette.

Average length.—Approximately 20.6 cm.

Average width.—Approximately 2.7 cm.
Shape of blade.—Oblanceolate.
Aspect.—Slightly recurved.
Apex.—Sharply acute.
Base.—Decurrent.
Margin.—Entire.
Texture of top surface.—Smooth, moderately glossy.
Texture of bottom surface.—Smooth, moderately glossy.
Color.—Young foliage upper side. Near R.H.S. Green to yellow-green; in between 137A and 147A, base flushed brown; 200B/C Young foliage under side: Near R.H.S. Yellow-green 146A, base greyed-purple; 187A. Mature foliage upper side: Near R.H.S. Yellow-green; 147A, margins at the base flushed greyed-purple; 187A. Mature foliage under side: Near R.H.S. Yellow-green; 146A, darker towards the base; 147A and slightly flushed greyed-purple; 187A.
Venation.—Type: Parallel. Venation coloration: Identical/Indistinguishable from foliage.
 Petiole: Not present, sessile.

INFLORESCENCE

General description: Simple spike (scape) consisting of many bracts only. No individual flowers are visible. Spike emerges from the centre of the rosette. Inflorescence is formed by conspicuous bracts.

Inflorescence longevity.—Approximately 10 weeks.
Inflorescence height.—12.9 cm.
Inflorescence width.—7.4 cm.

Peduncle:

Length.—6.2 cm.
Width.—0.7 cm.
Aspect.—Very straight, 90° angle to rosette.
Strength.—Very strong.
Color.—Near RHS. White 157A.

Bracts:

Average number of bracts.—75 Terminal bracts and 30 Scape Bracts.
Shape.—Ligulate.
Length.—5.7 cm.
Width.—3.2 cm.
Tip.—Acute.
Base.—Sheathed.
Margin.—Entire.
Color upperside.—Near RHS Greyed-Purple N186C and 187A.
Color underside.—Near RHS Greyed-Purple 187A.
Coloration scape bracts.—Both sides Near RHS Greyed-Purple 187B, with a lighter base of 187C/D.

OTHER CHARACTERISTICS

Reproductive organs: Not Present.

Disease resistance: Neither resistance nor susceptibility to diseases or pests has been observed in this variety.

Drought tolerance and cold tolerance: Observed to tolerate temperatures to 40° C. without any negative effects. Temperature tolerance above this range has not been observed. Tolerance of cold temperatures has not been observed.

Fruit/seed production: Not observed.

What is claimed is:

1. A new and distinct cultivar of *Guzmania* plant named 'Durapau' as herein illustrated and described.
