ABSTRACT (57)

A new cultivar of *Lobelia* named 'KLELE08621' particularly characterized by small, white flowers, and a compact and trailing growth habit, is disclosed.

1 Drawing Sheet

Genus and species: Lobelia erinus. Variety denomination: 'KLELE08621'.

#### BACKGROUND OF THE NEW PLANT

The present invention comprises a new and distinct cultivar of Lobelia, botanically known as Lobelia erinus, and hereinafter referred to by the cultivar name 'KLELE08621'. 'KLELE08621' originated from a controlled cross made in May 2005 in Stuttgart, Germany between the proprietary female Lobelia plant, '05 0368' (unpatented) and the proprietary male Lobelia plant, '05 0357' (unpatented). A single plant selection was subsequently chosen for further evaluation and for asexual propagation.

The new cultivar was first propagated in June 2006 by 15 Horticultural Society of London (R.H.S.) (2001). vegetative cuttings in Stuttgart, Germany and has been asexually reproduced repeatedly by vegetative cuttings and in-vitro propagation in Stuttgart, Germany over a three-year period (about five generations). 'KLELE08621' has been found to retain its distinctive characteristics through successive 20 asexual propagations.

Plant Breeder's Rights for this cultivar were applied for in Canada on Mar. 31, 2008. 'KLELE08621' has not been made publicly available more than one year prior to the filing date of this application.

# SUMMARY OF THE INVENTION

The following are the most outstanding and distinguishing characteristics of this new cultivar when grown under normal 30 commercial practices in a greenhouse in Stuttgart, Germany.

- 1. Small, white flowers; and
- 2. A compact and trailing growth habit.

#### DESCRIPTION OF THE PHOTOGRAPH

This new *Lobelia* plant is illustrated by the accompanying photograph which shows a close-up of the mature flowers, buds and foliage. The colors shown are as true as can be reasonably obtained by conventional photographic procedures.

The photograph is of a plant about three months old and grown from rooted cuttings in 10-cm pots in a greenhouse

(glasshouse) in Stuttgart, Germany between February to May under conditions which approximate those generally used in commercial practice.

#### DESCRIPTION OF THE NEW CULTIVAR

The following detailed descriptions set forth the distinctive characteristics of 'KLELE08621'. The data which define these characteristics were collected from asexual reproductions carried out in Stuttgart, Germany. The plant history was taken on two-month old plants in 10-cm pots that were pinched once and grown in a greenhouse in the Spring. The color readings were determined under natural light. Color references are to The R.H.S. Colour Chart of The Royal

## DESCRIPTION OF THE NEW PLANT

Classification:

Family.—Campanulaceae.

Genus and species.—Lobelia erinus.

Common name.—Lobelia.

Parentage:

Female parent.—The proprietary Lobelia plant '05 0368' (unpatented).

*Male parent.*—The proprietary *Lobelia* plant '05 0357' (unpatented).

Plant:

35

Growth and branching habit.—Compact vigor, good branching.

*Form:*.—Trailing.

Height (measured from the top of the soil, including any *flowers*).—10.0 cm.

Width (horizontal plant diameter, including any *flowers*).—21.0 cm.

*Time to produce a finished flowering plant.*—9 weeks. Outdoor plant performance.—Good.

*Time to initiate roots.*—3 weeks.

*Root description.*—Fine, white, moderate branching. Stems:

> Length.—About 15.0 cm. Diameter.—0.15 cm.

3

Internode length.—1.0 cm to 1.5 cm.

Color.—RHS 137A.

Texture.—Smooth, moderately ribbed.

Stem anthocyanin.—Absent.

Peduncle.—Color: RHS 141B. Length: 1.5 cm to 2.0 cm. 5 Diameter: 0.03 cm to 0.05 cm. Texture: Smooth.

#### Leaves:

Arrangement.—Alternate.

Attachment.—Sessile.

Color, immature leaf (both surfaces).—RHS 141A.
Color, mature leaf.—Upper surface: Between RHS

Length.—Basal leaves are 3.0 cm to 4.0 cm and upper leaves are about 1.0 cm.

141A and RHS 137A. Lower surface: RHS 137C.

Width.—Basal leaves are 0.7 cm to 1.0 cm and upper 15 leaves are 0.1 cm to 0.2 cm.

Shape.—Basal leaves are lanceolate and upper leaves are narrow lanceolate.

Margin.—Basal leaves are serrate and upper leaves are entire.

Apex.—Basal leaves are obtuse and upper leaves are acuminate.

Base.—Acute.

Texture (both surfaces).—Smooth.

Venation pattern.—Pinnate.

Venation color.—RHS 144C.

## Flower bud:

Shape.—Inverse drop.

Diameter.—0.2 cm to 0.3 cm.

Length.—0.5 cm to 0.7 cm.

Color when bud is first starting to open.—RHS 1D.

#### Inflorescence:

Blooming habit.—Continuous.

Lastingness of individual blooms on plant.—5 to 8 days. Fragrance.—Absent.

*Inflorescence type.*—Raceme.

Quantity of flowers and buds per flowering branch.—10 to 15.

# Flowers:

Flower diameter (horizontal).—About 1.7 cm.

Flower height (vertical).—About 1.5 cm.

Immature flower.—Color, upper and lower lobes (both surfaces): Whiter than RHS 155D.

Mature flower.—Upper lobe: Color (both surfaces): Whiter than RHS 155D. Length: 0.8 cm. Width: 0.6 45 cm. Shape: Obovate. Apex: Obtuse. Margin: Entire.

Texture (both surfaces): Smooth. Lower lobes: Color (both surfaces): Whiter than RHS 155D. Length: About 0.6 cm. Width: About 0.2 cm. Shape: Obovate. Apex: Obtuse. Margin: Entire. Texture (both surfaces): Smooth.

Corolla.—Color: Inside: Whiter than RHS 155D with yellowish stripes. Outside: Whiter than RHS 155D. Tube length: About 1.0 cm. Diameter: 0.3 cm.

Calyx.—Sepals: Color (both upper and lower surfaces): RHS 141B. Length: About 1.0 cm. Diameter: About 1.0 cm. Shape: Funnel, star-shaped (sepals are fused in the lower half). Apex: Acute. Texture: Smooth.

#### Reproductive organs:

Androecium.—Number of anthers: 5. Filament length: About 0.5 cm. Pollen color: Dark yellow. Pollen amount: Abundant.

Gynoecium.—Pistil length: About 0.5 cm. Stigma color: Green. Style color: Whitish. Style length: About 1.0 cm.

Fruit and seed set: Seeds are small, round, 0.05 cm wide and light brown in color.

Disease and insect resistance: No particular disease or insect resistance observed.

# COMPARISON WITH PARENTAL AND COMMERCIAL CULTIVARS

'KLELE08621' differs from the female parent, the proprietary *Lobelia* '05 0368' (unpatented), in that 'KLELE08621' has white flowers and a compact growth habit, while '05 0368' has blue flowers with an eye and a more vigorous growth habit.

'KLELE08621' differs from the male parent, the proprietary *Lobelia* '05 0357' (unpatented), in that 'KLELE08621' has white flowers and a trailing growth habit, while '05 0357' has pink flowers and an upright growth habit.

'KLELE08621' differs from the commercial comparison variety, 'KLELE06115' (U.S. Plant Pat. No. 19,693), in that 'KLELE08621' has a lower vigor and smaller flowers, while 'KLELE06115' has a higher vigor and larger flowers.

#### I claim:

1. A new and distinct cultivar of *Lobelia* plant named 'KLELE08621' as shown and described herein.
