(57) **ABSTRACT**

A new cultivar of *Arenaria* plant named 'Sapare' that is char-  
acterized by short height, a compact habit and white flowers.

**1 Drawing Sheet**

**1**

Botanical classification: *Arenaria monatana*.  
Variety denomination: 'Sapare'.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar  
of *Arenaria* plant botanically known as *Arenaria monatana*  
and hereinafter referred to by the cultivar name 'Sapare'.

'Sapare' was discovered as a single plant in an outdoor seed  
bed of unidentified *Arenaria monatana* plants in a cultivated  
area of Dromana, Victoria, Australia in 2004.

Asexual reproduction of the new cultivar 'Sapare' first  
occurred by terminal cuttings in 2004 in Dromana, Victoria,  
Australia.

Since that time, under careful observation, the unique char-  
acteristics of the new cultivar have been uniform, stable and  
reproduced true to type in successive generations of asexual  
reproduction.

**SUMMARY OF THE INVENTION**

The following represent the distinguishing characteristics  
of the new *Arenaria* cultivar 'Sapare'. These traits in combi-  
nation distinguish 'Sapare' as a new and distinct cultivar apart  
from other existing known varieties of *Arenaria*.

1. *Arenaria* 'Sapare' exhibits a short plant height and a  
compact habit.
2. *Arenaria* 'Sapare' exhibits white flowers.

The closest comparison cultivar is *Arenaria* 'Avalanche'  
(not patented). 'Sapare' is distinguishable from 'Avalanche'  
by the following characteristics:

1. 'Sapare' grows to one-half the height of 'Avalanche'.

**BRIEF DESCRIPTION OF THE DRAWING**

The accompanying photograph illustrates the distinguish-  
ing traits of *Arenaria* 'Sapare'. The plant in the photograph  
shows an overall view of a 26 week old plant. The photograph  
was taken using conventional techniques and although colors  
may appear different from actual colors due to light reflec-  
tance it is as accurate as possible by conventional photo-  
graphic techniques.

**BOTANICAL DESCRIPTION OF THE PLANT**

The following is a detailed description of the new *Arenaria*  
cultivar named 'Sapare'. Data was collected in Dromana,  
5 Victoria, Australia from 26 week old outdoor grown plants in  
12 cm. diameter containers. The time of year was Winter in  
the Southern Hemisphere. Color determinations are in accor-  
dance with The Royal Horticultural Society Colour Chart  
2007 edition, except where general color terms of ordinary  
10 dictionary significance are used. The growing requirements  
are similar to the species. 'Sapare' has not been tested under  
all possible conditions and phenotypic differences may be  
observed with variations in environmental, climatic, and cul-  
tural conditions, however, without any variance in genotype.  
15 Botanical classification: *Arenaria monatana* 'Sapare'.

Use: Ornamental Perennial.

Parentage: Unknown.

Vigor: Moderate.

Growth habit: Ground hugging.

20 Plant shape: Rounded.

Suitable container size: 12 cm.

Height: 30 cm. in height.

Width: 60 cm. in width.

Low Temperature Tolerance: 2° Centigrade.

25 High Temperature Tolerance: 30° Centigrade.

Propagation: Terminal cuttings.

Root system: Fibrous.

Stem:

*Branching habit.*—Upright, freely branching.

30 *Average number of lateral branches.*—56.

*Lateral branch diameter.*—Average 4 mm. in diameter.

*Lateral branch length.*—Average 25 cm. in length.

*Stem color.*—143C.

35 *Internode length.*—Approximately 1 cm. between  
nodes.

Foliage:

*Texture.*—Smooth.

*Leaf arrangement.*—Opposite.

*Compound or single.*—Single.

40 *Leaf shape.*—Ovate.

*Leaf dimensions.*—2 cm. in length and 1 cm. in width.

*Leaf base.*—Rounded.  
*Leaf apex.*—Rounded.  
*Leaf margin.*—Entire.  
*Leaf attachment.*—Sessile.  
*Leaf color (lower surface).*—143C. 5  
*Leaf color (upper surface).*—143C.  
 Flower:  
*Inflorescence type.*—Cyme.  
*Quantity of flowers per inflorescence.*—Average 5.  
*Quantity of flowers and buds per plant.*—160. 10  
*Flowering habit.*—Continuous.  
*Flowering season.*—November to February in the  
 Southern Hemisphere.  
*Flower bud length.*—4 mm. in length.  
*Flower bud diameter.*—3 mm. in diameter. 15  
*Flower bud shape.*—Ovate.  
*Bud color.*—N155A.  
*Fragrance.*—None.  
*Flower shape.*—Rotate.  
*Lastingness of flowers.*—approximately 2 weeks. 20  
*Flower dimensions.*—Average 4.0 cm. in diameter and  
 1.0 cm. in height.  
*Petal texture.*—Velvety, soft.  
*Number of petals.*—5.  
*Fused or unfused.*—Unfused. 25  
*Petal shape.*—Orbicular.  
*Petal margin.*—Entire.  
*Petal base.*—Rounded.  
*Petal apex.*—Obtuse.  
*Petal length.*—1.8 cm. 30  
*Petal width.*—1.8 cm.  
*Petal color (upper and lower surfaces).*—N155A.  
*Self-cleaning or persistent.*—Self-cleaning.  
*Number of sepals.*—4.

*Sepal margin.*—Entire.  
*Sepal apex.*—Acute.  
*Sepal base.*—Broad cuneate.  
*Sepal dimensions.*—3 mm. in length and 1.5 mm. in  
 width.  
*Sepal color (upper side).*—143C.  
*Sepal color (under side).*—143C.  
*Peduncle dimensions.*—4 cm. in length and 3 mm. in  
 diameter.  
*Peduncle color.*—143C.  
*Pedicel dimensions.*—3 mm. in length and 0.5 mm. in  
 diameter.  
*Pedicel color.*—143C.  
 Reproduction organs:  
*Stamen number.*—Average 12.  
*Anther shape.*—Oval.  
*Anther dimensions.*—0.5 mm. in length, filament 6 mm.  
 in length.  
*Anther color.*—N157A.  
*Filament color.*—N158B.  
*Amount of pollen.*—Low.  
*Pollen color.*—5D.  
*Pistil number.*—3.  
*Pistil length.*—3 mm.  
*Stigma shape.*—Club shaped.  
*Stigma color.*—145C.  
 Disease and pest resistance: Disease and pest resistance has  
 not been observed.  
 I claim:  
 1. A new and distinct variety of *Arenaria* plant named  
 ‘Sapare’ as described and illustrated.
