GTITM UPOVROM Citation for 'Bonpripicorn' as per QZ PBR 20090530; Mar. 23, 2009.*

* cited by examiner

Primary Examiner—Kent L Bell(74) *Attorney, Agent, or Firm*—C. A. Whealy(57) **ABSTRACT**

A new and distinct cultivar of *Euphorbia* plant named 'Bonpripicom' characterized by its compact and mounded plant habit; moderately vigorous growth habit; freely branching habit; strong stems that resist breakage; dark green-colored leaves; inflorescences with red purple-colored flower bracts; good post-production longevity; and relative tolerance to low production temperatures.

1 Drawing Sheet**2****SUMMARY OF THE INVENTION**

Plants of the new *Euphorbia* have not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environment such as temperature, daylength and light intensity, without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'Bonpripicom'. These characteristics in combination distinguish 'Bonpripicom' as a new and distinct cultivar of *Euphorbia*:

1. Compact and mounded plant habit.
2. Moderately vigorous growth habit.
3. Freely branching habit.
4. Strong stems that resist breakage.
5. Dark green-colored leaves.
6. Inflorescences with red purple-colored flower bracts.
7. Good post-production longevity.
8. Relatively tolerant to low production temperatures.

In side-by-side comparisons conducted in Higashiomii, Shiga, Japan, plants of the new *Euphorbia* differed from plants of the female parent selection in the following characteristics:

1. Plants of the new *Euphorbia* were more compact than plants of the female parent selection.
2. Plants of the new *Euphorbia* and the female parent selection differed in flower bract color as plants of the female parent selection had red-colored flower bracts.

In side-by-side comparisons conducted in Higashiomii, Shiga, Japan, plants of the new *Euphorbia* differed from plants of the male parent selection in the following characteristics:

1. Plants of the new *Euphorbia* were more compact than plants of the male parent selection.

Botanical Designation: *Euphorbia pulcherrima* Willd. ex *Klotzsch*×*Euphorbia cornastrum*.

Cultivar denomination: 'BONPRIPICOM'.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar of *Euphorbia* plant, an interspecific hybrid botanically known as *Euphorbia pulcherrima* Willd. ex *Klotzsch*×*Euphorbia cornastrum*, and hereinafter referred to by the name 'Bonpripicom'.

The new *Euphorbia* plant is a product of a planned breeding program conducted by the Inventor in Yellow Rock, New South Wales, Australia. The objective of the breeding program is to create new interspecific *Euphorbia* cultivars having compact and mounding plant habit, strong branches that resist breakage, flower bracts with desirable coloration and low temperature tolerance.

The new *Euphorbia* plant originated from a cross-pollination made by the Inventor in May, 2002 of a proprietary selection of *Euphorbia pulcherrima* Willd. ex *Klotzsch* identified as code number 83, not patented, as the female, or seed, parent, with an unnamed proprietary selection of *Euphorbia cornastrum*, not patented, as the male, or pollen, parent. The new *Euphorbia* plant was discovered and selected by the Inventor as a flowering plant within the progeny of the stated cross-pollination in a controlled greenhouse environment in Yellow Rock, New South Wales, Australia in August, 2003.

Asexual reproduction of the new *Euphorbia* plant by terminal vegetative cuttings in a controlled greenhouse environment in Yellow Rock, New South Wales, Australia since February, 2004, has shown that the unique features of this new *Euphorbia* plant are stable and reproduced true to type in successive generations of asexual reproduction.

2. Plants of the new *Euphorbia* and the male parent selection differed in flower bract color as plants of the male parent selection had white-colored flower bracts.

Plants of the new *Euphorbia* can be compared to plants of the *Euphorbia pulcherrima* Willd. ex Klotzsch×*Euphorbia cornastra* 'Eckcory', disclosed in U.S. Plant Pat. No. 15,849. In side-by-side comparisons conducted in Higashiomni, Shiga, Japan, plants of the new *Euphorbia* differed from plants of 'Eckcory' in the following characteristics:

1. Plants of the new *Euphorbia* were shorter than plants of 'Eckcory'.¹⁰
2. Plants of the new *Euphorbia* had broader leaves than plants of 'Eckcory'.¹⁵
3. Inflorescences of plants of the new *Euphorbia* had more flower bracts than inflorescences of plants of 'Eckcory'.²⁰
4. Inflorescences of plants of the new *Euphorbia* had longer and broader flower bracts than inflorescences of plants of 'Eckcory'.²⁵
5. Inflorescences of plants of the new *Euphorbia* had darker-colored flower bracts than inflorescences of plants of 'Eckcory'.³⁰
6. Inflorescences of plants of the new *Euphorbia* had more cyathia than inflorescences of plants of 'Eckcory'.³⁵

BRIEF DESCRIPTION OF THE PHOTOGRAPHS

The accompanying photographs illustrate the overall appearance of the new *Euphorbia*. These photographs show the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photographs may differ slightly from the color values cited in the detailed botanical description which accurately describe the colors of the new *Euphorbia* plant.⁴⁰

The photograph at the top of the sheet comprises a side perspective view of a typical flowering plant of 'Bonpripicom' grown in a container.⁴⁵

The photograph at the bottom of the sheet is a close-up view of a typical inflorescence of 'Bonpripicom'.⁵⁰

DETAILED BOTANICAL DESCRIPTION

Plants used in the aforementioned photographs and the following observations and measurements describe plants grown in containers in Higashiomni, Shiga, Japan during the autumn in a polyethylene-covered greenhouse and under conditions and practices which approximate those generally used in commercial *Euphorbia* production. During the production of the plants, day temperatures averaged 23° C. and night temperatures averaged 13° C. Measurements and numerical values represent averages for typical flowering plants. Plants were four months old when the photographs and the description were taken. In the following description, color references are made to The Royal Horticultural Society Colour Chart, Fourth Edition, 2001, except where general terms of ordinary dictionary significance are used.⁵⁵

Botanical classification: *Euphorbia pulcherrima* Willd. ex Klotzsch×*Euphorbia cornastra* 'Bonpripicom'.⁶⁰

Parentage:

Female, or seed, parent.—Proprietary selection of *Euphorbia pulcherrima* Willd. ex Klotzsch identified as code number 83, not patented.

Male, or pollen, parent.—Unnamed proprietary selection of *Euphorbia cornastra*, not patented.⁶⁵

Propagation:

Type.—Terminal vegetative cuttings.

Time to initiate roots, summer.—About one week at 20° C. to 25° C.

Time to initiate roots, winter.—About two weeks at 15° C. to 20° C.

Time to produce a rooted young plant, summer.—About three weeks at 20° C. to 25° C.

Time to produce a rooted young plant, winter.—About four weeks at 15° C. to 20° C.

Root description.—Fibrous; white in color.

Rooting habit.—Freely branching; moderately dense.

Plant description:

Plant habit and form.—Compact and mounded plant habit; inverted triangle; inflorescences positioned above the foliar plane; moderately vigorous growth habit.

Plant height.—About 16.6 cm.

Plant diameter or spread.—About 23.8 cm.

Lateral branch description.—Quantity: Freely branching habit, about four lateral branches develop per plant; pinching is typically not required. Length: About 10.2 cm. Diameter: About 2.9 mm. Internode length: About 1.2 cm. Strength: Strong. Texture: Smooth, glabrous. Color: Close to 146B.

Foliage description.—Arrangement: Alternate, simple. Length: About 9.5 cm. Width: About 5.4 cm. Shape: Ovate. Apex: Acute. Base: Truncate. Margin: Entire; slightly undulate. Venation pattern: Pinnate, reticulate. Texture, upper and lower surfaces: Smooth, glabrous. Color: Developing leaves, upper and lower surfaces: Close to 141B tinted with close to N58C. Fully expanded leaves, upper and lower surfaces: Close to 137A to 137B; venation, close to 145C. Petiole: Length: About 3.1 cm. Diameter: About 1.8 mm. Texture, upper and lower surfaces: Smooth, glabrous. Color, upper surface: Close to 145B tinted with close to 200C. Color, lower surface: Close to 145B.

Inflorescence description:

Inflorescence type and habit.—Inflorescences are compound corymbs of cyathia with colored flower bracts subtending the cyathia; inflorescences positioned above the foliage.

Quantity of inflorescence.—One inflorescence develops per lateral branch.

Fragrance.—Not detected.

Natural flowering season.—Plants typically flower during the autumn and winter in Higashiomni, Shiga, Japan; inflorescence initiation and development can also be induced under artificial long nyctoperiod/short photoperiod conditions. Early flowering habit, plants flower about 50 days under natural season conditions in Higashiomni, Shiga, Japan.

Post-production longevity.—Good post-production longevity; plants of the new *Euphorbia* maintain good substance and bract color for about seven weeks.

Flower bracts.—Quantity per inflorescence: About 20. Length, largest bracts: About 7.3 cm. Width, largest bracts: About 3.3 cm. Shape: Ovate. Apex: Acute. Base: Obtuse. Margin: Entire. Texture, upper and lower surfaces: Smooth, glabrous. Aspect: Close to perpendicular to the stem axis. Venation pattern: Pinnate, reticulate. Color: Developing or transitional bracts, upper surface: Close to N57A; towards the margins, close to 69B. Developing or transitional

bracts, lower surface: Close to N57D. Fully expanded bracts, upper surface: Close to N57C; towards the margins, close to 69B; venation, close to 186A to 186D. Fully expanded bracts, lower surface: Close to N57D; venation, close to 145B to 145D. Flower bract petiole: Length: About 1.3 cm. Diameter: About 1.4 mm. Texture, upper and lower surfaces: Smooth, glabrous. Color, upper and lower surfaces: Close to 144A.

Cyathia.—Quantity per corymb: About 18. Diameter of cyathia cluster: About 2 cm. Length, individual cyathium: About 5.3 mm. Width, individual cyathium: About 6.2 mm. Shape, individual cyathium: Globose. Color: Close to 146B. Nectaries: Quantity per cyathium: One. Size: About 3.8 mm by 2 mm. Color: Close to 151B.

Peduncles.—Length: About 2 mm. Diameter: About 1 mm. Strength: Strong. Aspect: Mostly upright. Texture: Smooth, glabrous. Color: Close to 145B.

Reproductive organs.—Stamens: Quantity per cyathium: Few. Anther shape: Lanceolate or globose. Anther length: About 1 mm to 10 mm. Anther color: Close to 187B. Amount of pollen: Scarce. Pistils: Plants of the new *Euphorbia* do not develop pistils.

Seed/fruit.—Seed and fruit production has not been observed.

Disease/pest resistance: Plants of the new *Euphorbia* have not been shown to be resistant to pathogens and pests common to *Euphorbias*.

Temperature tolerance: Plants of the new *Euphorbia* have been observed to tolerate temperatures ranging from about 8° C. to about 40° C.

It is claimed:

1. A new and distinct *Euphorbia* plant named 'Bonpripi-com' as illustrated and described.
