A new and distinct cultivar of *Helleborus* plant named 'HLR 160', characterized by its upright plant habit; freely flowering habit; long flowering period; single white and greyed purple bi-colored flowers; and good garden performance.

**2 Drawing Sheets****1**

Botanical designation: *Helleborus orientalis*.  
Cultivar denomination: 'HLR 160'.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar of *Helleborus* plant, botanically known as *Helleborus orientalis*, and hereinafter referred to by the name 'HLR 160'.

The new *Helleborus* plant is a product of a planned breeding program in Glandorf, Germany. The objective of the breeding program was to create new uniform *Helleborus* cultivars with unique and attractive flower coloration and resistance to pests.

The new *Helleborus* plant originated from a cross-pollination conducted by the Inventor in Glandorf, Germany in November, 2002 of two unnamed proprietary seedling selections of *Helleborus orientalis*, not patented. The new *Helleborus* plant was discovered and selected by the Inventor as a single flowering plant from within the progeny of the stated cross-pollination grown in a controlled greenhouse environment in Glandorf, Germany in February, 2005.

Asexual reproduction of the new *Helleborus* plant by divisions in a controlled greenhouse environment in Glandorf, Germany since March, 2005, has shown that the unique features of this new *Helleborus* plant are stable and reproduced true to type in successive generations.

**SUMMARY OF THE INVENTION**

Plants of the new *Helleborus* have not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environment and cultural practices such as temperature and light intensity without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'HLR 160'. These characteristics in combination distinguish 'HLR 160' as a new and distinct cultivar of *Helleborus*:

1. Upright plant habit.
2. Freely flowering habit.
3. Long flowering period.
4. Single white and greyed purple bi-colored flowers.
5. Good garden performance.

**2**

Compared to plants of the parent selections, plants of the new *Helleborus* are more uniform and more freely flowering.

Plants of the new *Helleborus* can be compared to plants of *Helleborus orientalis* 'HGC Merlin', disclosed in U.S. Plant Pat. No. 15,705. Plants of the new *Helleborus* differ primarily from plants of 'HGC Merlin' in the following characteristics:

1. Plants of the new *Helleborus* have larger flowers than plants of 'HGC Merlin'.
2. Flowers of plants of the new *Helleborus* are white and greyed purple in color whereas flowers of plants of 'HGC Merlin' are dark purple in color.

**BRIEF DESCRIPTION OF THE PHOTOGRAPHS**

The accompanying colored photographs illustrate the overall appearance of the new *Helleborus* plant, showing the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photographs may differ slightly from the color values cited in the detailed botanical description which accurately describe the colors of the new *Helleborus* plant.

The photograph on the first sheet comprises a side perspective view of a typical flowering plant of 'HLR 160' grown in a container.

The photograph on the second sheet is a close-up view of a typical flower of 'HLR 160'.

**DETAILED BOTANICAL DESCRIPTION**

The aforementioned photographs and following observations, measurements and values describe plants grown in Glandorf, Germany in 1.5-liter containers during the winter in a glass-covered greenhouse and under conditions which closely approximate commercial *Helleborus* production. During the production of the plants, day temperatures ranged from 12° C. to 32° C. and night temperatures ranged from 3° C. to 18° C. Plants were one year old when the photographs and the description were taken. In the following description, color references are made to The Royal Horticultural Society Colour Chart, 2007 Edition, except where general terms of ordinary dictionary significance are used.

Botanical classification: *Helleborus orientalis* 'HLR 160'.

## Parentage:

*Female, or seed, parent.*—Unnamed proprietary seedling selection of *Helleborus orientalis*, not patented.

*Male, or pollen, parent.*—Unnamed proprietary seedling selection of *Helleborus orientalis*, not patented. 5

## Propagation:

*Type.*—By tissue culture.

*Time to initiate roots.*—About two months at 12° C.

*Time to produce a rooted young plant.*—About six months at 4° C. to 15° C. 10

*Root description.*—Thick to thin, fleshy; white to brown in color.

*Rooting habit.*—Sparse.

## Plant description:

*Plant form and growth habit.*—Herbaceous perennial; 15 upright plant habit; moderately vigorous growth habit.

*Plant height.*—About 33.8 cm.

*Plant diameter (area of spread).*—About 30.7 cm.

## Foliage description:

*Arrangement.*—Palmately compound with five leaflets per leaf.

*Leaf length.*—About 10.8 cm.

*Leaf width.*—About 13.7 cm.

*Leaflet length.*—About 7.4 cm. 25

*Leaflet width.*—About 3 cm.

*Leaf shape.*—Palmate; orbicular in outline.

*Leaflet shape.*—Obovate; lowest leaflets cleft to three-parted.

*Leaflet apex.*—Acute.

30

*Leaflet base.*—Attenuate.

*Leaflet margin.*—Sharply senate.

*Leaflet texture, upper and lower surfaces.*—Smooth, glabrous; leathery.

*Leaflet venation pattern.*—Pinnate.

35

*Leaflet color.*—Developing leaves, upper surface: Close to 143A. Developing leaves, lower surface: Close to 144A. Fully developed leaves, upper surface: Close to N137B; towards the base, close to 177A; venation, close to 144C. Fully developed leaves, lower surface: Close to 146A to 146B; venation, close to 144C.

40

*Petiole.*—Length: About 10.5 cm. Diameter: About 4.5 mm. Texture, upper and lower surfaces: Smooth, glabrous. Color, upper and lower surfaces: Close to 144B; towards the base, tinged with close to 186C. 45

## Flower description:

*Flower shape and habit.*—Single rotate flowers; freely flowering habit, about 14 flowers developing per plant; petals not observed.

*Fragrance.*—None detected.

50

*Natural flowering season.*—Long flowering period; plants flower from January to March in Germany.

*Flower longevity on the plant.*—About twelve days; flowers not persistent.

*Flower buds.*—Length: About 1.4 cm. Diameter: About 9 mm. Shape: Ovate. Color: Close to 145D; towards the base, close to 144C.

*Flowers.*—Diameter: About 5.4 cm. Depth (height): About 2 cm.

*Sepals.*—Arrangement: About five in a single whorl. Length: About 3.5 cm. Width: About 3 cm. Shape: Broadly ovate. Apex: Broadly acute. Margin: Entire. Texture, upper and lower surfaces: Smooth, glabrous; waxy. Color: When opening, upper surface: Towards the margins, NN155C to NN155D; central speckled blotch, close to 187D; at the base, close to 145C. When opening, lower surface: Close to NN155B to NN155C; at the base, close to 145C. Fully opened, upper surface: Towards the margins, NN155B; central speckled blotch, close to 187D; at the base, close to 145C to 145D. With development, close to 145C towards the margins. Fully opened, lower surface: Close to NN155B to NN155C; at the base, close to 145C.

*Primary peduncles.*—Strength: Moderately strong. Length: About 29.2 cm. Diameter: About 7 mm. Aspect: Mostly upright, about 10° from vertical. Texture: Smooth, glabrous. Color: Close to 145B to 145C.

*Reproductive organs.*—Stamens: Quantity per flower: About 60. Filament length: About 1.2 cm. Filament color: Close to 157D. Anther shape: Reniform. Anther length: About 2.5 mm. Anther color: Close to 155A. Pollen amount: Moderate. Pollen color: Close to 150D. Pistils: Quantity per flower: About ten. Pistil length: About 1.2 cm. Stigma shape: Club-shaped. Stigma color: Close to 157C to 157D. Style length: About 1.2 cm. Style color: Close to 144C to 144D. Ovary color: Close to 145A. Nectaries: Quantity per flower: About 15. Length: About 8 mm. Diameter, apex: Close to 4 mm. Diameter, base: Close to 1 mm. Color: Close to 144B; towards the apex, close to N144A; towards the base, close to 153A.

*Seeds/fruits.*—Seed and fruit development have not been observed.

*Garden performance:* Plants of the new *Helleborus* have been observed to have good garden performance and to tolerate rain and wind. Plants of the new *Helleborus* have been observed to tolerate high temperatures of about 35° C. and are hardy to USDA Hardiness Zone 5.

*Pathogen/pest resistance:* Plants of the new *Helleborus* have not been shown to be resistant to pathogens and pests common to *Helleborus*.

It is claimed:

1. A new and distinct *Helleborus* plant named 'HLR 160' as illustrated and described.
