(57) **ABSTRACT**

A new *Eucalyptus grandis* tree particularly distinguished by
having a fast growth rate, average frost tolerance, and good
coppicing properties, is disclosed.

**ACKNOWLEDGEMENT OF FEDERAL
RESEARCH SUPPORT**

The present invention was supported in part by funds from
the U.S. Government. The U.S. Government therefore may
have certain rights in the invention.

Genus and species: *Eucalyptus grandis*.

Variety denomination: ‘G1’.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new and distinct variety
of *Eucalyptus*, botanically known as *Eucalyptus grandis*, and
hereinafter referred to by the variety name ‘G1’. It is charac-
terized by having a fast growth rate, average frost tolerance
and good coppicing properties when grown under normal
forestry practices in Florida.

‘G1’ originated from a group of 31,725 seedlings of *Euca-
lyptus grandis*. ‘G1’ is the result of open-pollination in a
third-generation seedling seed orchard at Palmdale, Fla. The
female (seed) parent of ‘G1’ is the proprietary *Eucalyptus
grandis* seedling selection with the identification number
‘1007’ (unpatented) characterized by its fast growth and aver-
age frost tolerance. The male (pollen) parent of ‘G1’ is
unknown. The maternal parent (1007) originated from open-
pollination. The female (seed) parent of ‘1007’ is the propi-
etary *Eucalyptus grandis* seedling selection with the identi-
fication number ‘91’ (unpatented) characterized by its good
growth and acceptable frost tolerance. The male (pollen)
parent of ‘1007’ is unknown. ‘G1’ was selected as a single
clone from the progeny of the above stated open-pollination
during February 1982.

‘G1’ was first asexually propagated in June of 2007 in Lake
Alfred, Fla. through cuttings and in vitro propagation. Asexu-
ally propagated trees of ‘G1’ have remained true to the origi-
nal selected tree, and all characteristics of the tree have been
transmitted and retained through three successive asexual
vegetative generations.

Plant Breeder’s Rights for this cultivar have not been
applied for. ‘G1’ has not been made publicly available more
than one year prior to the filing of this application.

2

DESCRIPTION OF THE PHOTOGRAPH(S)

This new *Eucalyptus* tree is illustrated by the accompany-
ing photographs which show the tree’s form and foliage. The
colors shown are as true as can be reasonably obtained by
conventional photographic procedures. The photographs are
of a tree approximately 13-years old.

FIG. 1 shows the overall plant habit including foliage.

FIG. 2 shows a close-up of the mature leaves.

FIG. 3 shows a close-up of the bark.

FIG. 4 shows the upper branches.

FIG. 5 shows the seeds.

DESCRIPTION OF THE NEW CULTIVAR

The following detailed description sets forth the distinctive
characteristics of ‘G1’. The present botanical description is
that of 13-year-old trees growing near Mulberry, Fla. The
colors (except those in common terms) are described from
The R.H.S. Colour Chart published by The Royal Horticul-
tural Society in London (second edition), in association with
the Flower Council of Holland.

DETAILED BOTANICAL DESCRIPTION

Classification:

Botanical.—*Eucalyptus grandis* var. ‘G1’.

Common name.—*Eucalyptus*.

Parentage:

Female parent.—‘1007’ (unpatented).

Male parent.—Unknown.

Tree:

Size.—Height: 12.6 m. Spread: About 4.0 m.

Vigor.—Average.

Density.—Open.

Form (overall shape of tree).—Narrowly upright with
somewhat drooping branches.

Growth habit (current season).—Evergreen.

Trunk and branches:

Trunk texture.—Smooth at top, rough at base.

Trunk bark color.—Mottled grey-brown.

Branch texture.—Glabrous. Branch color.—Green.

Leaves:

Size (lamina average).—Length: 10.0 cm to 20.0 cm.
Width: 1.5 cm to 3.0 cm.
Type.—Simple, petiolate, alternate, persistent.
Shape.—Narrow lanceolate, slightly sickle shaped.
Apex.—Acuminate.
Base.—Acute, can be slightly unequilateral.
Margin.—Smooth.
Surface texture.—Upper surface: Glabrous. Lower sur-
face: Glabrous.
Color.—Upper surface: RHS 126C (Dark green). Lower
surface: RHS 124B (Light green).
Petiole.—Shape: Slightly flattened, groove at top.
Length: 1.5 cm to 2.5 cm. Width: 0.1 cm to 0.2 cm.
Color: RHS 144D (Pale green). Texture: Smooth.

Flowers:

Type.—Clustered.
Blossom period.—Mid-August to late-September.
Fragrance.—Mild.

Reproductive organs:

Stamen number.—Many.
Anther color.—White.
Anther filament length.—About 1.0 cm.
Pistil number.—1.
Pistil length.—Less than 1.0 cm.

Fruit/seed (if produced):

Size.—Length: 0.5 cm to 0.7 cm. Width: 0.5 cm to 0.6
cm.
Shape.—Pyriform.
Texture.—Smooth, woody.
Apex.—Cuspidate.
Base.—Attenuate.
Color.—Immature: Green. Mature: Brown.
Stalk.—Short.

Resistance/tolerance to diseases/pests: No unusual suscepti-
bilities noted.

COMPARISON WITH PARENTAL AND KNOWN
VARIETIES

‘G1’ differs from the female parent ‘1007’ (unpatented) by
having faster growth and better frost tolerance than ‘1007’. In
addition, ‘G1’ has good coppicing properties.

There are no commercial varieties known to the inventor
which can be compared with ‘G1’.

I claim:

1. A new and distinct variety of *Eucalyptus grandis* tree as
shown and described herein.
