(57) **ABSTRACT**

(51) **Int. Cl.**  
*A01H 7/00* (2006.01)

‘Greenpower’ is a new *Cupressocyparis leylandii* variety  
particularly distinguished by having a sturdy, straight upright  
leader, which creates the cultural advantage of not being  
necessary to tie the leader to a cane in order to maintain a good  
upright growth, a very narrow, pyramidal growth habit, and  
dark green foliage is disclosed.

**2 Drawing Sheets**

**1**

**2**

Genus and species: *Cupressocyparis leylandii*.  
Variety denomination: ‘Greenpower’.

2. Very narrow, upright growth habit, and narrow, conical  
plant shape; and
3. Dark green foliage.

**BACKGROUND OF THE NEW TREE**

**DESCRIPTION OF THE PHOTOGRAPHS**

The present invention relates to a new and distinct variety  
of *Cupressocyparis leylandii* plant and is hereinafter referred  
to by the variety name ‘Greenpower’. ‘Greenpower’ is a natu-  
rally-occurring branch mutation of an un-named selection of  
*Cupressocyparis leylandii* (unpatented) discovered in a cul-  
tivated nursery in Biezenmortel, The Netherlands in 2003.  
The nursery has a dilluvial sandy soil with a pH of 6.7 and an  
annual rainfall of approximately 670 mm. The location can be  
rated as USDA Zone 8a.

This new *Cupressocyparis leylandii* plant is illustrated by  
the accompanying photographs which show the tree’s form  
and foliage. The colors shown are as true as can be reasonably  
obtained by conventional photographic procedures. Photo-  
graphs were taken of a 3-year-old tree in October 2009.

- FIG. 1 shows the overall plant habit.  
FIG. 2 shows a close-up of the leaves.

‘Greenpower’ has been asexually reproduced for five gen-  
erations by softwood cuttings in a controlled environment in  
Biezenmortel, The Netherlands since 2005. ‘Greenpower’  
has been found to retain its distinctive characteristics through  
successive generations of asexual propagation via softwood  
cuttings.

**DESCRIPTION OF THE NEW TREE**

**REFERENCE TO PLANT BREEDERS’ RIGHTS**

Plant Breeders’ Rights for this variety were filed in the  
European Union on Nov. 10, 2008.

In the following description, color references are made to  
The Royal Horticultural Society Colour Chart, fifth edition,  
2007. The following detailed description sets forth the dis-  
tinctive characteristics of ‘Greenpower’. The data which  
define these characteristics were collected from asexual  
reproductions carried out in Biezenmortel, The Netherlands  
in October 2009. The detailed description was taken from  
3-year-old trees grown outdoors under normal outdoor light.  
Daytime temperatures ranged from 12° C. to 28° C., while  
night time temperatures ranged from 4° C. to 16° C. No  
growth retardants were used.

**SUMMARY OF THE INVENTION**

**DETAILED BOTANICAL DESCRIPTION OF THE  
NEW TREE**

The following characteristics of the new variety have been  
repeatedly observed and can be used to distinguish ‘Green-  
power’ as a new and distinct variety of *Cupressocyparis ley-  
landii* plant:

1. A sturdy, straight upright leader which creates the cul-  
tural advantage of not being necessary to tie the leader to  
a cane in order to maintain a good upright growth;

**Classification:**

*Botanical name.*—*Cupressocyparis leylandii*.  
*Common name.*—Leyland Cypress.  
*Denomination.*—‘Greenpower’.

## Parentage:

*Parent.*—Naturally-occurring branch mutation of *Cupressocyparis leylandii* (unpatented).

## Tree:

*Type.*—Woody perennial, shrub, conifer or evergreen. 5

*Propagation type.*—Softwood.

*Shape.*—Narrow conical.

*Growth habit.*—Narrow upright, pyramidal.

*Growth rate.*—Average, approximately 40.0 cm per season for a young plant. 10

*Time to initiate roots (average).*—In summer, 20 weeks with an average soil/air temperature of 20° C.

*Time to produce a finished plant.*—Approximately 1 year.

*Roots.*—Density: Moderate. Branching: Low to moderate. Color: RHS N167D (Greyed-orange). Thickness: Medium. Texture: Moderately fibrous. 15

*Size.*—Height: 137.8 cm. Width (spread): 52.9 cm.

*Vigor.*—Moderate.

*Trunk.*—Surface texture: Young tree: Smooth. Mature tree: Shallowly ridged and flaking. Color: From RHS 175A (Greyed-orange) and RHS 176A (Greyed-orange) to RHS 200C (Brown). 20

## Lateral branches:

*Branching habit.*—Moderate; no basal branching. 25

*Number of lateral branches per plant (average).*—43.

*Appearance of lateral branches.*—Rounded, covered with scale-like leaves, dull.

*Color.*—Young branch: From RHS 143A (Green) to RHS 144A (Yellow-green). Mature branch: From RHS 175A (Greyed-orange) and RHS 176A (Greyed-orange) to RHS 200C (Brown). 30

*Diameter (average).*—0.35 cm.

*Length (average).*—43.2 cm.

*Length of internode (average).*—1.1 cm between lateral branches and smaller branchlets. 35

*Strength.*—Strong.

*Pubescence.*—Absent.

## Leaves:

*General description.*—Arrangement: Opposite, single. 40  
Fragrance: Absent.

*Aspect (arrangement on stem).*—Rounded, covered with scale-like leaves.

*Shape.*—Elliptic, scale-like.

*Apex.*—Apiculate. 45

*Base.*—Cuneate.

*Margin.*—Entire.

*Attachment.*—Sessile (no petioles).

*Appearance.*—Slightly glossy.

*Mature leaf length (average).*—0.65 cm. 50

*Mature leaf width (average).*—0.25 cm.

*Quantity per lateral branch (average).*—Over 3000 scale-like leaves.

*Pubescence.*—Absent.

*Durability to stresses.*—Very high.

*Venation.*—Veins not visible.

*Color.*—Young foliage (both surfaces): From RHS 143A (Green) to RHS 144A (Yellow-green). Mature foliage (both surfaces): From RHS 137A (Green) to RHS N137A (Green) and RHS N137B (Green).

*Inflorescence:* No flowers observed to date

*Fruit and seed set:* No seed set observed

*Disease and insect resistance:* Not more susceptible to diseases and pests than other *Cupressocyparis leylandii* varieties.

*Weather tolerance:* Plants of the new *Cupressocyparis leylandii* have been observed to tolerate high temperatures to at least 35° C. and low temperatures to USDA Zone 6.

## COMPARISON WITH PARENTAL VARIETY

‘Greenpower’ is a new and distinct variety of *Cupressocyparis leylandii* having a sturdy, straight upright leader, which creates the cultural advantage of not being necessary to tie the leader to a cane in order to maintain a good upright growth, a very narrow, pyramidal growth habit, and dark green foliage. ‘Greenpower’ is different from its parent *Cupressocyparis leylandii* because *Cupressocyparis leylandii* has a leader that is not very sturdy or typically straight, creating the need to tie the leader to a cane in order to maintain a good upright growth, has a broader pyramidal growth habit, and has a medium green foliage color.

## COMPARISON WITH COMMERCIAL VARIETY

‘Greenpower’ differs from commercial comparison variety ‘Leighton Green’ (not patented) in that ‘Greenpower’ has a sturdy, straight upright leader, which creates the cultural advantage of not being necessary to tie the leader to a cane in order to maintain a good upright growth, a very narrow, pyramidal growth habit, and dark green foliage, while ‘Leighton Green’ has a leader that is not very sturdy or typically straight, creating the need to tie the leader to a cane in order to maintain a good upright growth, and has a broader pyramidal growth habit.

I claim:

1. A new and unique variety of *Cupressocyparis leylandii* tree named ‘Greenpower’ as herein shown and described.
