(57) **ABSTRACT**

A *chrysanthemum* plant named 'Zanmupearly' characterized by its medium sized blooms with white ray florets and a cream center, and prolific branching; natural season flower date October 10; blooming for a period of 4 weeks.

**3 Drawing Sheets****1**

Botanical designation: *Chrysanthemum×morifolium* Ramat.  
Cultivar denomination: 'Zanmupearly'.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar of *chrysanthemum* plant, botanically known as *Chrysanthemum×morifolium* Ramat., commercially known as a garden mum, and hereinafter referred to by the cultivar denomination 'Zanmupearly'. 'Zanmupearly' is a product of a breeding and selection program for outdoor pot mums (garden mums) which had the objective of creating new cultivars with a double type inflorescence, a natural season flower date around October 10, blooming for a period of 5 weeks. 'Zanmupearly' is a seedling resulting from a crossing program set up by a previous breeder, and which records are unknown to the inventor.

The new and distinct cultivar was discovered and selected as a flowering plant by Wilhelmus Bernardus Blom on a cultivated field in Rijsenhout, The Netherlands in 2003. The first act of asexual production of 'Zanmupearly' was accomplished when vegetative cuttings from the initial selection in 2003 were propagated further in a controlled environment in Rijsenhout, The Netherlands. The new cultivar has been found to retain its distinctive characteristics through successive propagations.

**BRIEF DESCRIPTION OF THE DRAWINGS**

The present invention of a new and distinct variety of *chrysanthemum* is shown in the accompanying drawings, the color being as nearly true as possible with color photographs of this type.

FIG. 1 shows a plant of the cultivar in full bloom.

FIG. 2 shows the various stages of bloom of the new cultivar.

FIG. 3 shows the various stages of foliage of the new cultivar.

**DESCRIPTION OF THE INVENTION**

The observations and measurements were gathered from plants grown out door in Rijsenhout, The Netherlands under

**2**

natural day length and temperature and planted in week 23 in 2009. The natural blooming date of this crop was October 11. The average height of the plants was 38 cm. No growth retardants were used. No tests were done on disease or insect resistance or susceptibility. No tests were done on cold or drought tolerance. This new variety produces medium sized blooms with white ray florets and a cream center blooming for a period of 4 weeks.

From the cultivars known to inventor the most similar existing cultivar in comparison to 'Zanmupearly' is 'Zanmucandle' (U.S. patent application Ser. No. 12/591,869). When 'Zanmucandle' and 'Zanmupearly' are being compared the following differences are noticed: (1) Inflorescence size And (2) Plant height. (1) The inflorescences of 'Zanmucandle' are larger than those of 'Zanmupearly'. (2) Plants of 'Zanmucandle' are smaller than those of 'Zanmupearly'.

The following is a description of the plant and characteristics that distinguish 'Zanmupearly' as a new and distinct variety.

The color designations are taken from the plant itself. Accordingly, any discrepancies between the color designations and the colors depicted in the photographs are due to photographic tolerances. The color chart used in this description is: The Royal Horticultural Society Colour Chart, edition 2001.
