(57)**ABSTRACT**

A new and distinct cultivar of *Verbena* plant named 'Duempflapea', characterized by its semi-upright and mounded plant habit; freely branching habit; freely flowering habit; and large orange red-colored flowers that become lighter in color with development and are held above and beyond the foliar plane in mounded umbels.

1 Drawing Sheet

Botanical designation: Verbena hybrida. Cultivar denomination: 'DUEMPFLAPEA'.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar of *Verbena* plant, botanically known as *Verbena hybrida* and hereinafter referred to by the name 'Duempflapea'.

The new Verbena plant is a product of a planned breeding program conducted by the Inventor in Rheinberg, Germany. The objective of the breeding program is to create new uniform Verbena plants with numerous attractive flowers.

The new *Verbena* plant originated from a self-pollination made by the Inventor in July, 2007 in Rheinberg, Germany of 15 a proprietary selection of Verbena hybrida identified as code number F-12-16, not patented. The new Verbena plant was discovered and selected by the Inventor as a single flowering plant within the progeny of the stated self-pollination in a controlled greenhouse environment in Rheinberg, Germany 20 in May, 2009.

Asexual reproduction of the new *Verbena* plant by terminal cuttings in a controlled greenhouse environment in Rheinberg, Germany since May, 2009 has shown that the unique features of this new *Verbena* plant are stable and reproduced 25 true to type in successive generations.

SUMMARY OF THE INVENTION

Plants of the new *Verbena* have not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environmental conditions such as temperature and light intensity without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'Duempflapea'. These characteristics in combination distinguish 'Duempflapea' as a new and distinct *Verbena* plant:

- 1. Semi-upright and mounded plant habit.
- 2. Freely branching habit.
- 3. Freely flowering habit.

4. Large orange red-colored flowers that become lighter in color with development and are held above and beyond the foliar plane in mounded umbels.

Plants of the new *Verbena* differ from plants of the parent selection primarily in growth habit as plants of the new Verbena are more vigorous than plants of the parent selection.

Plants of the new Verbena can be compared to plants of the Verbena hybrida 'Vegas Peach', not patented. In side-by-side comparisons conducted in Rheinberg, Germany, plants of the new Verbena differed from plants of 'Vegas Peach' in the following characteristics:

- 1. Plants of the new *Verbena* were more compact than plants of 'Vegas Peach'.
- 2. Plants of the new *Verbena* were less vigorous than plants of 'Vegas Peach'.
- 3. Plants of the new *Verbena* had smaller leaves than plants of 'Vegas Peach'.
- 4. Plants of the new *Verbena* had shorter peduncles than plants of 'Vegas Peach'.
- 5. Plants of the new *Verbena* had darker-colored flowers than plants of 'Vegas Peach'.

BRIEF DESCRIPTION OF THE PHOTOGRAPH

The accompanying colored photograph illustrates the overall appearance of the new *Verbena* plant showing the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photograph may differ slightly from the color values cited in the detailed botanical description which accurately describe the colors of the new Verbena plant. The photograph comprises a close-up view of a typical flowering plant of 'Duempflapea'.

DETAILED BOTANICAL DESCRIPTION

The aforementioned photograph and following observations, measurements and values describe plants grown during the summer in 10.5-cm containers in a glass-covered green-40 house in Rheinberg, Germany and under conditions which closely approximate commercial Verbena production. During the production of the plants, day and night temperatures aver3

aged 18° C. and light levels averaged 4,500 lux. Plants were pinched one time three weeks after planting and were ten weeks old when the photograph and the description were taken. In the description, color references are made to The Royal Horticultural Society Colour Chart, 1995 Edition, ⁵ except where general terms of ordinary dictionary significance are used.

Botanical classification: Verbena hybrida 'Duempflapea'.

Parentage: Self-pollination of a proprietary selection of *Verbena hybrida* identified as code number F-12-16, not patented.

Propagation:

Type.—Terminal cuttings.

Time to initiate roots, summer.—About five days at $_{15}$ 20° C.

Time to initiate roots, winter.—About seven days at 20° C.

Time to produce a rooted young plant, summer.—About three weeks at 20° C.

Time to produce a rooted young plant, winter.—About four weeks at 20° C.

Root description.—Fine, fibrous; white in color.

Rooting habit.—Freely branching; dense.

Plant description:

Plant habit.—Semi-upright and mounded plant habit; freely branching habit with about four to six primary lateral branches with secondary lateral branches potentially forming at every node; pinching enhances lateral branch development; dense and bushy plant habit; moderately vigorous growth habit.

Plant height.—About 17 cm.

Plant diameter.—About 21 cm.

Lateral branch description:

Length.—About 19 cm.

Diameter.—About 2.5 mm.

Internode length.—About 3.8 cm.

Texture.—Pubescent.

Strength.—Strong.

Color.—Close to 144A.

Foliage description:

Arrangement.—Opposite, simple.

Length.—About 3.2 cm.

Width.—About 1.6 cm.

Shape.—Lanceolate.

Apex.—Acute.

Base.—Attenuate.

Margin.—Lobed.

Texture, upper and lower surfaces.—Pubescent, coarse. Venation pattern.—Pinnate.

Color.—Developing leaves, upper and lower surfaces: Close to 146A. Fully expanded leaves, upper and lower surfaces: Close to 146A; venation, close to 144C.

Petiole length.—About 3 mm.

Petiole diameter.—About 2 mm.

Petiole texture, upper and lower surfaces.—Smooth.

Petiole color, upper surface.—Close to 144B.

Petiole color, lower surface.—Close to 144C.

Flower description:

Flower arrangement and habit.—Salverform flowers arranged in hemispherical terminal umbels; umbels dense and mounding; numerous umbels covering the entire plant; flowers face upward or outward; freely flowering habit with about 29 flowers and flower buds per inflorescence.

Fragrance.—Flowers not fragrant.

Natural flowering season.—Plants flower continuously from the spring through the fall in Germany; plants begin flowering about eight weeks after planting.

Flower longevity.—Individual flowers last about one week on the plant; flowers persistent.

Inflorescence size.—Height: About 4 cm. Diameter: About 4 cm.

Flowers.—Appearance: Flared trumpet, corolla fused, five-parted. Diameter: About 1.6 cm. Depth: About 1.9 cm.

Flower buds.—Length: About 1.1 cm. Diameter: About 2 mm. Shape: Oval to tubular. Color: Close to 30A.

Corolla.—Arrangement: Single whorl of five fused petals. Petal lobe length: About 8 mm. Petal lobe width: About 7 mm. Petal lobe shape: Obovate. Petal lobe apex: Emarginate. Petal margin: Entire. Petal texture, upper and lower surfaces: Smooth, glabrous. Color: When opening, upper surface: Close to 33A. When opening, lower surface: Close to 33B. Fully opened, upper surface: Close to 33C; color becoming closer to 34D with development. Fully opened, lower surface: Close to 33D.

Calyx.—Arrangement: Star-shaped calyx with five fused sepals. Sepal length: About 1 cm. Sepal width: About 1 mm. Sepal shape: Ligulate. Sepal apex: Acute. Sepal margin: Entire. Sepal texture, upper and lower surfaces: Pubescent, coarse. Sepal color, upper and lower surfaces: Close to 144A.

Peduncles.—Length: About 2 cm. Diameter: About 3 mm. Strength: Strong. Texture: Pubescent. Color: Close to 144A.

Pedicels.—Length: About 0.5 mm. Diameter: About 0.5 mm. Strength: Strong. Texture: Smooth, glabrous. Color: Close to 144A.

Reproductive organs.—Stamens: Quantity/arrangement: About four to five per flower, adnate to corolla tube. Anther shape: Oval. Anther length: About 0.75 mm. Anther color: Close to 144B. Pollen amount: Moderate. Pollen color: Close to 2D. Pistils: Quantity: One per flower. Pistil length: About 1.6 cm. Stigma shape: Bi-parted. Stigma color: Close to 144A. Style length: About 1.3 cm. Style color: Close to 144D. Ovary color: Close to 144C. Fruits/seeds: Fruit and seed development has not been observed.

Temperature tolerance: Plants of the new *Verbena* have been observed to tolerate temperatures from about 5° C. to about 35° C.

Pathogen/pest resistance: Plants of the new *Verbena* have not been observed to be resistant to pathogens and pests common to *Verbenas*.

It is claimed:

1. A new and distinct *Verbena* plant named 'Duempflapea' as illustrated and described.
