(57) **ABSTRACT**

A new *phlox* plant named ‘Barseventy’ particularly distinguished by its light pink flowers and outstanding plant vigor, is disclosed.

1 Drawing Sheet

1

Genus and species: *Phlox subulata*.
Variety denomination: ‘Barseventy’.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new and distinct variety botanically known as *Phlox subulata*, and hereinafter referred to by the variety name ‘Barseventy’. The new variety originated from a controlled hybridization in April of 2007 in Aalsmeer, the Netherlands between the female parent, proprietary *phlox* plant ‘PS007’ (unpatented), and the male parent, proprietary *phlox* plant ‘PS022’ (unpatented).

‘Barseventy’ was first propagated by cuttings in Aalsmeer, The Netherlands in 2007 and has been subsequently asexually propagated. ‘Barseventy’ has been found to retain its distinctive characteristics through successive asexual propagations via vegetative cuttings through at least 6 seasons.

Plant Breeder’s Rights application for ‘Barseventy’ was filed in Europe on Jun. 23, 2011. ‘Barseventy’ has not been sold or made publicly available more than one year prior to filing of this application.

SUMMARY OF THE INVENTION

The following are the most outstanding and distinguishing characteristics of this new variety when grown under normal horticultural practices in Aalsmeer, The Netherlands.

1. Light pink flowers; and
2. Outstanding plant vigor.

DESCRIPTION OF THE PHOTOGRAPHS

This new *phlox* plant is illustrated by the accompanying photograph which shows the flower blooms and foliage of the plant. The colors shown are as true as can be reasonably obtained by conventional photographic procedures. The photograph was taken in Aalsmeer, The Netherlands in February of 2011.

DESCRIPTION OF THE NEW VARIETY

The following detailed description sets forth the distinctive characteristics of ‘Barseventy’. The data which defines these

2

characteristics were collected from asexual reproductions carried out in Aalsmeer, The Netherlands. The botanical description of ‘Barseventy’ was taken from six to eight-month-old plants. Color readings were taken under natural light. Color references are primarily to The R.H.S. Colour Chart.

DETAILED BOTANICAL DESCRIPTION

10 Classification:

Family.—Polemoniaceae.

Botanical name.—*Phlox subulata*.

Common name.—*Phlox*.

Denomination.—‘Barseventy’.

15 Parentage:

Female parent.—‘PS007’.

Male parent.—‘PS022’.

Plant:

Plant habit.—Compact, creeping, outwardly spreading and mounded.

Growth habit.—Vigorous and freely-branching.

Form.—Compact.

Height (measured from the top of the soil).—10.0 cm to 20.0 cm.

Diameter or area of spread.—20.0 cm to 30.0 cm.

Propagation.—Vegetative cuttings.

Time to produce a finished flowering plant.—25 to 30 weeks.

Lastingness of inflorescence on the plant.—4 weeks.

Outdoor plant performance.—Good.

Time to initiate and develop roots.—3 weeks.

Time to produce rooted cutting or liner (young plant).—5 weeks.

Root description.—Many tiny roots.

35 Branches:

Habit.—Creeping.

Number of branches per plant.—At least 10, quickly dividing into new branches.

Length of lateral branches.—20.0 cm to 30.0 cm.

Spread of lateral branches.—15.0 cm.

40 Stems:

Shape in cross-section.—Round.

Color.—RHS 199D.

Diameter.—0.6 mm.

Pubescence.—Absent.

Internode length.—1.0 mm to 5.0 mm.

Leaves:

Arrangement.—Opposite.

Color.—Immature leaf (both upper and lower surfaces):
RHS 137C. Mature leaf (both upper and lower sur-
faces): RHS 137A.

Apex.—Acute.

Base.—Truncated.

Margin.—Smooth.

Length.—15.0 mm.

Width.—2.0 mm.

Shape.—Acicular.

Texture.—Smooth.

Quantity per lateral branch.—Many.

Venation pattern.—One single vein in middle of the leaf.

Venation color (both upper and lower surfaces).—Close
to RHS 137A.

Peduncle:

Color.—RHS 199D.

Length.—25.0 mm.

Diameter.—0.5 mm to 0.8 mm.

Inflorescence:

Inflorescence type.—Cyme.

Blooming habit.—Abundant flowers.

Height.—50.0 mm.

Width.—50.0 mm.

Natural flowering season.—Spring (April to May).

Flower number per inflorescence.—3 to 6.

Fragrance.—Absent.

Flowers:

Flower bud.—Length: 12.0 mm. Diameter: 6.0 mm.

Pedicel.—Color: RHS 137A. Length: 10.0 mm. Diam-
eter: 0.5 mm.

Sepals.—Number: 5. Length: 8.0 mm. Width: 2.0 mm.

Color (both upper and lower surfaces): RHS 137A.

Texture (both upper and lower surfaces): Smooth.

Corolla.—Length: 15.0 mm. Width: 3.0 mm.

Petals.—Length: 15.0 mm. Width: 9.0 mm. Petal num-
ber: 5. Apex: Notched. Margin: Smooth. Texture
(both upper and lower surfaces): Smooth. Color:
Upper surface (base color): RHS 71D. Upper surface
(at center): RHS 74A. Outside of corolla tube: RHS
71D.

Reproductive organs:

Stamens.—Quantity (per flower): 5. Anther color: RHS
12C. Pollen color: RHS 12C.

Pistil.—Quantity: 1. Color: RHS 137A. Length: 2.0
mm.

Style.—Length: 8.0 mm. Shape: Three lobes.

Disease and insect resistance: Not observed.

Pest resistance: Not observed.

COMPARISON WITH PARENTAL AND
COMMERCIAL VARIETIES

‘Barseventy’ differs from parental variety ‘PS007’ (unpat-
ented) in that ‘Barseventy’ has light pink flowers (RHS 71D),
while ‘PS007’ has lighter pink flowers (RHS 69A).

‘Barseventy’ differs from parental variety ‘PS022’ (unpat-
ented) in that ‘Barseventy’ has light pink flowers (RHS 71D),
while ‘PS022’ has violet flowers (RHS 84B).

‘Barseventy’ differs from the commercial variety ‘Alex-
ander’s Surprise’ (unpatented) in that ‘Barseventy’ has light
pink flowers (RHS 71D), while ‘Alexander’s Surprise’ has
lighter pink flowers (RHS 69A).

I claim:

1. A new and distinct variety of *phlox* plant named ‘Barse-
venty’ as shown and described herein.
