A new variety of carnation named 'KLEDG10118' particularly characterized by its good branching, early purple pink with dark center flowers and good performance, is disclosed.

1 Drawing Sheet**1**

Genus and species: *Dianthus caryophyllus*.
Variety denomination: 'KLEDG10118'.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new and distinct variety of carnation, botanically known as *Dianthus caryophyllus*, and hereinafter referred to by the variety name 'KLEDG10118'. The new variety is the result of a cross conducted in June 2006 in Stuttgart, Germany between the proprietary female parent carnation plant, 'Dianthus×allwoodii' (unpatented) and the proprietary male parent, 'DCP 06 020' (unpatented). A single plant selection was subsequently chosen for further evaluation and for asexual propagation. The new variety was first propagated via vegetative cuttings in June 2007 in Stuttgart, Germany and has been asexually reproduced repeatedly by vegetative cuttings in Stuttgart, Germany for approximately six to seven generations. 'KLEDG10118' has been found to retain its distinctive characteristics through successive asexual propagations via vegetative cuttings.

Plant Breeder's Rights for this variety were applied for in Europe on Jul. 15, 2010. 'KLEDG10118' has not been made publicly available or sold more than one year prior to the filing date of this application.

SUMMARY OF THE INVENTION

The following are the most outstanding and distinguishing characteristics of this new variety when grown under normal horticultural practices in a greenhouse in Stuttgart, Germany.

1. Good branching;
2. Early flower; and
3. Good performance.

DESCRIPTION OF THE PHOTOGRAPH

This new carnation plant is illustrated by the accompanying photograph which shows the flowers and foliage of the plant. The colors shown are as true as can be reasonably obtained by conventional photographic procedures. The photograph was taken in April 2010 of a 5-month-old plant grown

from rooted cuttings in a 10 centimeter pot in a glass-covered greenhouse in Stuttgart, Germany under conditions which approximate those generally used in horticultural practice.

DESCRIPTION OF THE NEW VARIETY

The following detailed descriptions set forth the distinctive characteristics of 'KLEDG10118'. The data which define these characteristics were collected from asexual reproductions carried out in Stuttgart, Germany. The plant history was taken in Spring 2010 on 5-month-old plants in 10 centimeter pots that were pinched once at week 45 and grown in a glass-covered greenhouse. The color readings were determined under natural light. Color references are to The R.H.S. Colour Chart of The Royal Horticultural Society of London (R.H.S.), Fifth Edition (2007).
