(57) **ABSTRACT**

A new and distinct *×Heucherella* plant substantially as shown  
and described, characterized by spring leaves of orange  
amber with a strong red pattern along veins, summer leaves  
amber with red brown leaf centers, fall leaves red with darker  
leaf centers, distinctively lobed, palmately divided leaves,  
small white flowers on short gray purple flower stalks, a  
medium plant size with multiple crowns, and excellent vigor.

**1**

Botanical denomination: *×Heucherella* hybrid.  
Variety designation: ‘Buttered Rum’.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar  
of *×Heucherella* and given the cultivar name of ‘Buttered  
Rum’. *Heucherella* is in the family Saxifragaceae.  
*×Heucherella* ‘Buttered Rum’ originated from a controlled  
cross between *Heuchera* K270-4 (a proprietary unreleased  
*Heuchera* hybrid), as the seed parent, and *Tiarella* 58-9 (a  
proprietary unreleased *Tiarella* hybrid), as the pollen parent.

Compared to the seed parent, *Heuchera* K270-4 (unpat-  
ented), the new cultivar has leaves that are deeply lobed and  
caramel to red brown colored with a red to dark blotch along  
the main veins compared to leaves that are shallowly lobed  
and tan with no blotch.

Compared to the pollen parent, *Tiarella* 58-9 (unpatented),  
the new cultivar has amber to red brown foliage rather than  
green.

Compared to *×Heucherella* ‘Brass Lantern’ (U.S. Plant  
Pat. No. 22,396) and *×Heucherella* ‘Sweet Tea’ (U.S. Plant  
Pat. No. 21,296), this new cultivar has a lower more compact  
habit, shorter flower spikes, and keeps the red tones in the  
foliage color all the time rather than only in the spring and fall.

This new *×Heucherella* is distinguished by:

1. spring leaves of orange amber with a strong red pattern  
along veins,
2. summer leaves amber with red brown leaf centers,
3. fall leaves red with darker leaf centers.

**2**

4. distinctively lobed, palmately divided leaves,
5. small white flowers on short maroon flower stalks
6. medium plant size with multiple crowns, and
7. excellent vigor.

5 This new cultivar has been reproduced only by asexual  
propagation (division and tissue culture). Each of the progeny  
exhibits identical characteristics to the original plant. Asexual  
propagation by division and tissue culture using standard  
micropropagation techniques with terminal and lateral  
10 shoots, as done in Canby, Oreg., shows that the foregoing  
characteristics and distinctions come true to form and are  
established and transmitted through succeeding propaga-  
tions. The present invention has not been evaluated under all  
15 possible environmental conditions. The phenotype may vary  
with variations in environment without a change in the geno-  
type of the plant.

**BRIEF DESCRIPTION OF THE DRAWINGS**

20 FIG. 1 shows a six-month-old *×Heucherella* ‘Buttered  
Rum’ growing in a one gallon container in a cool greenhouse  
in early May Canby, Oreg.

25 FIG. 2 shows a one-year-old *×Heucherella* ‘Buttered Rum’  
in bloom, planted in the ground in a trial bed in the shade in  
late summer in Canby, Oreg.

FIG. 3 shows a one-year-old grown in a one gallon con-  
tainer in the greenhouse in late July.

FIG. 4 shows a 14-month-old plant in the trial bed in full  
sun in the winter.

30 FIG. 5 shows the flowers of *×Heucherella* ‘Buttered Rum’.

## DETAILED PLANT DESCRIPTION

The following is a detailed description of the new *×Heucherella* cultivar based on observations of two-year-old specimens growing in one gallon containers in a cold greenhouse in Canby, Oreg. Canby is Zone 8 on the USDA Hardiness map. Temperatures range from a high of 95 degrees F. in August to an average of 32 degrees F. in January. Normal rainfall in Canby is 42.8 inches per year. The color descriptions are all based on *The Royal Horticultural Society Colour Chart*, fifth edition.

## Plant:

*Form*.—Basal rosette, herbaceous perennial.

*Hardiness*.—USDA Zone 4 to 9.

*Size*.—19 cm tall from top of the foliage to the ground and 30 cm wide.

*Habit*.—Mounding.

*Vigor*.—Excellent.

*Roots*.—Fibrous, freely branching, fine, and white in color. Roots develop easily from cuttings.

## Leaf:

*Type*.—Simple.

*Arrangement*.—Rosette.

*Shape*.—Ovate.

*Lobing/division*.—5 lobes palmately parted with the terminal the longest and most deeply parted, each with distinctly cut secondary lobes (the depth of the lobes varies with plant maturity and leaf age; leaves become more deeply lobed with maturity).

*Venation*.—Palmate.

*Margins*.—Broadly crenate, older leaves undulate or twist slightly.

*Apex*.—Mucronulate.

*Base*.—Cordate.

*Blade size*.—Grows to 10.5 cm long and 8.5 cm wide.

*Surface texture*.—Glandular both surfaces.

*Petiole description*.—Grows to 13 cm long and 2 mm wide, glandular hairs, between Purple N77C and Greyed Purple 183D.

*Leaf color*.—Spring, topside, between Greyed Orange 174A and 165B with pattern Greyed Purple 183A, bottom side closest to Greyed Red 182B; summer topside newest leaves closest to Greyed Purple 183A (lightening to Greyed Orange 165C with the pattern Greyed Red 182A), bottom side closest to Greyed Purple 183C; fall, topside, Greyed Purple 185A with

venation pattern Greyed Purple N186A, bottom side N79B; winter, topside Greyed Purple 187B with venation pattern Greyed Purple N186A, bottom side N79B.

## Inflorescence:

*Size*.—Grows to 2.3 cm wide and 10 cm long.

*Type*.—Raceme.

*Number of flowers per raceme*.—About 60.

*Number of raceme*.—24.

*Peduncle*.—Grows to 20 cm tall, 2 mm wide at base, Greyed Orange 166A, glandular hairs.

*Pedicel*.—Variable, with glandular hairs, Greyed Yellow 161A.

*Bloom period*.—May with sporadic rebloom in Canby, Oreg.

## Flower bud:

*Size*.—2 mm wide and 3 mm long.

*Description*.—Glandular puberulent, ovoid.

*Color*.—White NN155C.

## Flower:

*Type*.—Imperfect.

*Shape*.—Campanulate.

*Size*.—4 mm deep and 5 mm wide.

*Petal description*.—5 in number, lanceolate, 4 mm long and 1 mm wide, some reflexed, tip acuminate, base attenuate, margin entire, glabrous on both sides, White NN155D on both sides.

*Calyx description*.—4 mm deep and 2 mm wide, with 5 lobes, divided  $\frac{3}{4}$  way to the base, campanulate, glandular hairs on outside, glabrous inside, tip obtuse, margin entire, NN155D on both sides.

*Stamen description*.—None.

*Pistil description*.—One central two beaked pistil, 4 mm long and 2 mm wide, White NN155D.

*Fragrance*.—None.

*Lastingness*.—Each raceme blooms for about 2 weeks on the plant.

Fruit and seed: None.

Disease and pest tolerance: The new cultivar is typical to the genus. No known resistances to pests or diseases. No problems have been found in Canby, Oreg.

## I claim:

1. A new and distinct *×Heucherella* plant as herein illustrated and described.
