(57) **ABSTRACT**

An *Agapanthus* plant particularly distinguished by large, bluish-purple inflorescences, and yellow and green variegated foliage, is disclosed.

1 Drawing Sheet

1

Genus and species: *Agapanthus africanus*.
Variety denomination: ‘HinesAg1’.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new and distinct variety of *Agapanthus*, botanically known as *Agapanthus africanus*, and hereinafter referred to by the variety name ‘HinesAg1’. The new variety originated as a sport from tissue culture of *Agapanthus africanus* ‘Hinag’, commercially known as SUMMER GOLD ‘Hinag’ (U.S. Plant Pat. No. 10,866) in June 1999 in Irvine, Calif.

The new plant was first asexually propagated in Irvine, Calif. in 1999 and has been asexually reproduced by divisions for approximately 12.5 years in Irvine, Calif. The present invention has been found to retain its distinctive characteristics through successive asexual propagations by divisions.

‘HinesAg1’ has not been made publicly available or sold more than one year prior to the filing of this application.

SUMMARY

The following are the most outstanding and distinguishing characteristics of the new variety when grown under normal horticultural practices in Irvine, Calif.

1. Large, bluish-purple inflorescences; and
2. Yellow and green variegated foliage.

DESCRIPTION OF THE PHOTOGRAPHS

This new *Agapanthus* plant is illustrated by the accompanying photographs which show the overall plant habit, foliage and inflorescence of the plant. The colors are as true as can be reasonably obtained by conventional photographic procedures. The photographs are of a 3-year old plants grown outdoors in Irvine, Calif. in May 2010.

FIG. 1 shows a the whole plant, including the habit, foliage and inflorescence.

FIG. 2 shows a close-up of the foliage.

2

DESCRIPTION OF THE NEW VARIETY

The following detailed descriptions set forth the distinctive characteristics of ‘HinesAg1’. The data which defines these characteristics were collected from asexual reproductions carried out in Irvine, Calif. The plant history was taken in January 2012 on 1-year old plants grown outdoors in Irvine, Calif. Color references were taken under natural light and are to The R.H.S. Colour Chart of The Royal Horticultural Society of London (R.H.S.), fifth edition (2007). Texture descriptions were taken using a dissecting microscope.

Classification:

Family.—Amaryllidaceae.

Botanical name.—*Agapanthus africanus*.

Common name.—African lily.

Denomination.—‘HinesAg1’.

Parentage:

Parent.—*Agapanthus africanus* ‘Hinag’, commercially known as SUMMER GOLD ‘Hinag’ (U.S. Plant Pat. No. 10,866).

Plant:

Propagation type.—Divisions.

Plant height.—About 41.7 cm to top of the foliage; if including the inflorescence, about 64.5 cm to 72.5 cm.

Plant spread/diameter.—3 feet to 4 feet.

Growth rate.—Medium vigorous.

Temperature tolerances.—Zones 8 to 10.

Foliage:

Quantity of blades per plant.—11.

Arrangement.—Basal.

Length.—45.7 cm.

Width.—3.2 cm to 3.8 cm.

Shape of blade.—Linear.

Margin.—Entire.

Apex.—Acute.

Base.—Sheathed.

Texture (both upper and lower surfaces).—Smooth.

Venation pattern (both upper and lower surfaces).—
Linear.

*Color (both upper and lower surfaces).—*Random
stripes of RHS 146A, RHS 148C, RHS 148B and
RHS 13C. 5

Inflorescence:

Inflorescence type.—Round umbel composed of many
individual flowers.

Habit.—Upright.

Number of flowers per inflorescence or umbel.—81 to 10
92.

Number of scapes per plant.—1.

Typical and observed flowering season.—Spring to
summer.

Fragrance.—Absent. 15

Height.—6.5 cm.

Width.—14.0 cm.

Flower depth.—6.0 cm to 8.0 cm (including the 2.8 cm
stem).

Flower width.—3.3 cm. 20

Bud.—Color: RHS 92B and RHS 94B. Length: From
less than 1.0 cm to 2.5 cm. Shape: Elongated having a
rounded end (the end is the part not attached to the
pedicel).

Tepals.—Arrangement and quantity per flower: Seven 25
arranged in a single whorl with the tepals fused into a
narrow tube. Length: 2.5 cm; unfused length is 2.2
cm. Width: Unfused width is 0.6 cm to 0.8 cm. Base:
Fused. Apex: Rounded. Shape: Spatulate. Margin:
Entire. Color (when opening and fully mature): Upper 30
surface: RHS 97D and RHS 93C. Lower surface:
RHS 91B and RHS 93C.

Flower tube length.—2.8 cm to 3.9 cm.

Pedicels.—Length: 2.6 cm to 3.0 cm. Diameter: 3.1 mm
to 4.7 mm. Color: RHS 137C and RHS 148D.
Strength: Strong. Texture: Smooth.

Peduncle.—Length: 58.0 cm to 66.0 cm. Diameter: 2.8
mm to 5.0 mm. Color: RHS 148C, RHS 144A, and
RHS 145D. Strength: Strong. Texture: Smooth.

Reproductive organs, seeds, and disease/pest resistance:

Stamens.—Quantity per flower: 7. Anther length: 4.0
cm. Filament color: RHS 92D. Pollen amount and
color: Moderate.

Pistil quantity.—1 per flower. Stigma quantity: 1 per
flower. Style length: 2.1 cm. Style color: RHS 84D,
RHS 93D, and RHS 92A. Ovary color: RHS 145C.

Seed.—Shape: Mainly long oval-shaped. Color: RHS
202A. Length: 6.0 cm. Width: 1.5 cm to 2.0 cm.

Disease and pest resistance or susceptibility.—None
observed.

COMPARISON WITH PARENTAL AND
COMMERCIAL VARIETY

‘HinesAg1’ differs from the parent ‘Hinag’ (U.S. Plant Pat.
No. 10,866) in that ‘HinesAg1’ has a taller plant height (31.0
cm) than ‘Hinag’ (about 18.0 cm).

‘HinesAg1’ differs from the commercial comparison ‘Ben-
fran’ (U.S. Plant Pat. No. 21,705) in that ‘HinesAg1’ has a
longer leaf blade (45.7 cm) than ‘Benfran’ (30.0 cm).

I claim:
1. A new and distinct variety of *Agapanthus* plant as shown
and described herein.
