(57) **ABSTRACT**

A new *Hypericum* plant particularly distinguished by red  
berries, bright green leaves, and an upright, dense, and bushy  
plant habit, is disclosed.

**2 Drawing Sheets**

**1**

Genus and species: *Hypericum×Inodorum*.  
Variety denomination: ‘RUIHYH009A’.

**BACKGROUND OF THE NEW PLANT**

The present invention comprises a new and distinct variety  
of *Hypericum*, botanically known as *Hypericum×Inodorum*,  
and hereinafter referred to by the variety name  
‘RUIHYH009A’. ‘RUIHYH009A’ originated from a cross  
conducted in June 2007 in Hazerswoude, The Netherlands  
between the proprietary female *Hypericum* variety ‘Hp-04-  
0126-003’ (unpatented), and pollen from a mixture of un-  
named male *Hypericum* varieties.

The seeds from the cross were sown and plants were grown  
outdoors for evaluation. An individual plant designated  
‘RUIHYH009A’ was selected in October 2010.  
‘RUIHYH009A’ was first vegetatively propagated in May  
2010 in Hazerswoude, The Netherlands by softwood cut-  
tings. ‘RUIHYH009A’ was found to reproduce true to type in  
successive generations of asexual propagation via softwood  
cuttings.

‘RUIHYH009A’ has not been made publicly available or  
sold more than one year prior to the filing date of this appli-  
cation.

**SUMMARY**

The following are the most outstanding and distinguishing  
characteristics of this new variety when grown under normal  
horticultural practices in Hazerswoude, The Netherlands.

1. Red berries;
2. Bright green leaves; and
3. An upright, dense, and bushy plant habit.

**DESCRIPTION OF THE PHOTOGRAPHS**

This new *Hypericum* plant is illustrated by the accompa-  
nying photographs which show the plant’s overall plant habit

**2**

including form, foliage, and berries. The photograph is of a  
one-year-old plant grown in outdoors in Hazerswoude, The  
Netherlands in September 2010. The colors shown are as true  
as can be reasonably obtained by conventional photographic  
procedures.

FIG. 1 shows the overall plant habit in a pot.

FIG. 2 shows a close-up of the foliage and berries.

**DESCRIPTION OF THE NEW VARIETY**

The following detailed descriptions set forth the distinctive  
characteristics of ‘RUIHYH009A’. The data which define  
these characteristics were collected from one-year-old plants  
grown outdoors in Amstelveen, The Netherlands in Septem-  
ber 2013. Color references are to The R.H.S. Colour Chart of  
The Royal Horticultural Society of London (R.H.S.), 1995.

Classification:

*Family*.—Hypericeae.

*Botanical*.—*Hypericum×Inodorum*.

*Designation*.—‘RUIHYH009A’.

*Parentage*.—Female parent: The proprietary female  
*Hypericum* variety ‘Hp-04-0126-003’ (unpatented).  
Male parent: A mixture of pollen from un-named  
*Hypericum* varieties.

Plant:

*Form*.—Upright.

*Habit*.—Dense, bushy.

*Height (measured from the top of the soil)*.—24.0 cm.

*Width (horizontal plant diameter)*.—30.0 cm.

*Time to produce a finished plant*.—8 months.

*Outdoor plant performance*.—For use in pots.

*Time to initiate and develop roots*.—14 to 21 days.

*Root description*.—Fibrous, well-branched; when  
young, are white, but older roots are RHS 165A  
(Brown).

*Propagation type*.—Softwood cutting.

*Growing season*.—Flowers in the summer and berries  
develop in September.

## Stems:

*Quantity per plant.*—Average is 20.  
*Length.*—About 17.0 cm.  
*Internode length.*—3.0 cm.  
*Diameter (from midpoint).*—About 3.0 mm.  
*Color.*—RHS 173A.  
*Texture.*—Smooth.  
*Anthocyanin.*—Present, RHS 173A.  
*Strength.*—Strong.

## Leaves:

*Arrangement.*—Decussate.  
*Length.*—5.0 cm.  
*Width.*—2.5 cm.  
*Shape.*—Oval to lanceolate.  
*Apex.*—Acute.  
*Base.*—Cordate.  
*Margin.*—Entire.  
*Color, immature.*—Upper surface: RHS 138A. Lower surface: RHS 138C.  
*Color, mature.*—Upper surface: RHS 137A. Lower surface: RHS 138B.  
*Texture (both upper and lower surfaces).*—Smooth.  
*Venation type.*—Pinnate.  
*Venation color.*—Upper surface: RHS 137A. Lower surface: RHS 138B.  
*Petiole.*—Absent.

## Inflorescence:

*Type.*—Cyme, compound, composed of approximately 7 cymes.  
*Height.*—6.0 cm.  
*Width.*—4.5 cm.  
*Flowering season.*—Summer.  
*Fragrance.*—Absent.  
*Peduncle.*—Length: 10.0 mm. Diameter: 1.0 mm. Color: RHS 46C. Strength: Weak. Texture: Smooth.

## Bud:

*Color.*—RHS 17C.  
*Shape.*—Round.  
*Height.*—0.8 cm.  
*Diameter.*—0.7 cm.  
*Texture.*—Smooth.

## Flower:

*Depth.*—1.0 cm.  
*Diameter.*—2.3 cm.  
*Quantity per inflorescence.*—6.  
*Petals.*—Arrangement and quantity of petals per flower: Single, composed of 5 petals per flower. Length: 0.8 cm. Width: 0.6 cm. Shape: Obovate. Apex: Rounded. Base: Cuneate. Margin: Entire. Texture (both upper and lower surfaces): Smooth. Color (both immature and mature): Upper surface: RHS 13A. Lower surface: RHS 13B.

## Calyx:

*Arrangement and quantity of sepals per flower.*—5.  
*Shape.*—Flat.  
*Sepals.*—Length: 1.0 cm. Width: 0.8 cm. Shape: Ovate. Apex: Acute. Base: Cordate. Margin: Entire. Texture

(both upper and lower surfaces): Smooth. Color: Upper surface: RHS 138A. Lower surface: RHS 139D.

## Pedicel:

*Length.*—2.0 cm.  
*Diameter.*—0.15 cm.  
*Color.*—RHS 173A.  
*Texture.*—Smooth.

## Reproductive organs:

- 10 *Stamens.*—Quantity per flower: About 45. Filament: Length: 0.7 cm. Width: 0.2 mm. Color: RHS 11A. Anther: Length: 0.08 cm. Width: 0.5 mm. Color: RHS 15A. Pollen amount: Moderate. Pollen color: RHS 13B.
- 15 *Pistil.*—Quantity per flower: 3. Length: 0.4 cm. Width: 5.0 mm. Stigma: Shape: Globular. Color: RHS 183A. Quantity of stigma per pistil: 3. Style: Length: 0.4 cm. Color: RHS 153D. Ovary: Color: RHS 37A. Length: 7.0 mm. Width: 5.0 mm.
- 20 Fruit and seed set: Berries observed; 6 berries per inflorescence, berries are smooth and matte in glossiness, berries are ovate in shape, 1.4 cm in length, 1.0 cm in width, and RHS 45B.
- 25 Disease and pest/insect resistance: No disease and pest/insect resistance observed or tested.

## COMPARISON WITH PARENTAL LINE AND KNOWN VARIETY

- 30 ‘RUIHYH009A’ is a distinct variety of *Hypericum* and is distinguished from its female parent as described in Table 1.

TABLE 1

Comparison with Parental Line		
Characteristic	‘RUIHYH009A’	Female Parent ‘Hp-04-0126-003’
Berry color	Red	Green

- 40 When ‘RUIHYH009A’ is compared to the commercial variety ‘Seibig’ (U.S. Plant Pat. No. 20,668), the following differences are described in Table 2.

TABLE 2

Comparison with Similar Variety		
Characteristic	‘RUIHYH009A’	‘Seibig’
Plant height	24.0 cm	70.0 cm
Plant width	30.0 cm	50.0 cm to 60.0 cm

## I claim:

- 55 1. A new and distinct variety of *Hypericum* plant designated ‘RUIHYH009A’ as illustrated and described herein.
