(57) **ABSTRACT**

A new *Thuja* plant named 'RutThu#1' is very compact with dark green foliage.

1 Drawing Sheet

1
STATEMENT REGARDING
FEDERALLY-SPONSORED RESEARCH

This invention was made, in part, with U.S. Government support on behalf of U.S. Department of Agriculture, Hatch Act Grant. The U.S. Government has certain rights in this invention.

Latin name of the genus and species of the plant claimed: 'RutThu#1' is a rich green compact evergreen cultivar of the genus and species *Thuja occidentalis*.

Variety denomination: The new *Thuja occidentalis* claimed is of the cultivar denominated 'RutThu#1'.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar of *Thuja occidentalis*, hereinafter referred to as 'RutThu#1'.

Pedigree and history. Seed of *Thuja occidentalis* 'Holmstrup' (unpatented) was received in 2003, cold stratified and sown. This seed was germinated at the University of Georgia Tifton Campus before being transferred in 2004 to the Center for Applied Nursery Research (CANR) in Dearing, Ga. There were thirty-five seedlings grown from this seed that were transferred to the CANR in Dearing, Ga. Five of these thirty-five plants were selected in 2005 for further evaluation. These five selected plants were planted in a field trial area in Dearing, Ga. on Feb. 27, 2006. The height and width of 'RutThu#1' at planting was 13"×12". After seven years, 'RutThu#1' was the darkest green and most compact of these five plants. Height and width measurements of 'RutThu#1' on Sep. 28, 2010 were 26"×21" and on Nov. 20, 2013 were 31"×24". In contrast, the final height and width of 'Holmstrup' variety plants of the same age growing under comparable growing conditions was 57"×48". My new plant has been asexually propagated at Dearing, Ga. by hardwood cuttings. The resulting progeny have been observed and these observations have confirmed that the distinguishing characteristics of 'RutThu#1' set forth herein are fixed in succeeding generations.

5 The following traits have been repeatedly observed of three year old asexually propagated progeny of my new variety growing in Dearing, Ga., and are determined to be the unique characteristics of the new *Thuja occidentalis* plant variety 'RutThu#1':

10 1. Compact.
2. Dark green.
10 'RutThu#1' can be compared to 'Holmstrup'. 'RutThu#1' is shorter and more compact (31" high×24" wide) than 'Holmstrup' after seven years in the field at CANR.

BRIEF DESCRIPTION OF THE PHOTOGRAPHS

15 The accompanying colored photographic illustrations show the overall appearance and distinct characteristics of the new cultivar of *Thuja occidentalis*. The colors in the photographs are as close as possible with the photographic and printing technology utilized.

20 FIG. 1 is a photograph of a six-year old *Thuja* 'RutThu#1' planted in Dearing, Ga. The plant in this photograph is 28 inches tall by 26 inches wide.

DETAILED BOTANICAL DESCRIPTION

25 Throughout this specification, color names beginning with a small letter signify that the name of that color, as used in common speech, is aptly descriptive. Color names beginning with a capital letter designate values based upon The R.H.S. Colour Chart, 5th Edition published by The Royal Horticultural Society, London, England.

30 The following is a detailed description of the botanical description of the new variety 'RutThu#1'. Where dimensions, sizes, colors, and other characteristics are given, it is to be understood that such characteristics are approximations and averages set forth as accurately as practicable. It should be noted that the phenotype of my new cultivar may vary with variations in environmental, climatic, and cultural conditions, as it has not been tested under all possible environmental

conditions. The descriptions reported herein are largely from ten year old specimen 'RutThu#1' plants grown in Dearing, Ga. The foliage colors listed are for winter growth.

Plant type: Coniferous, evergreen.

Habit: Compact, rounded.

Size (inches):

Height.—31" (about 79 cm).

Width.—24" (about 61 cm).

Stem:

Color.—Greyed-Purple 183A. Scales: Greyed-Orange 10
165B.

Length.—8-20 cm.

Diameter.—Mature Trunk — 1 cm. Young Trunk — 5
mm. Lateral Branches — 2 mm.

Pubescence.—No pubescence, semi-glossy, smooth
with some scales on younger stems. Scales shed with
maturity.

Shape.—Round.

Odor (of bruised stem).—Moderately strong, pleasant
evergreen (tansy) scent.

Internode length.—0.5-1 cm.

Arrangement.—Alternate.

Branching.—Main stem arises from base with numer-
ous secondary branches, number of lateral branches
average about 1 to 2 per cm of main stem.

Branching aspect.—Main stems upright. Lateral stems
are at a typical angle of about 45 degrees from the
main stem.

Leaf:

Color (RHS).—Winter tips — Greyed-Orange 165B, 30
becomes Greyed-Orange 177A. Upper — Yellow-
Green 146A. Lower — Yellow-Green 146B.

Mature size (l×w).—6-10 mm×1-2 mm.

Apex.—Acute.

Base.—Cuneate.

Margin.—Entire.

Shape.—Linear with scale-like structure.

Lobes.—None.

Pubescence.—None.

Arrangement on stem.—Alternate.

Venation.—None visible.

Texture.—Upper — glabrous, smooth, glossy. Lower —
smooth, semi-glossy.

Quantity.—About 2 to 4 leaves per cm in lateral
branches.

Odor when crushed.—Moderate intensity, pleasant
evergreen (tansy) scent.

5 15 Flowers: No flowers have been observed.

Cone development: Neither male nor female cones have been
observed.

Root description: Fibrous. Growth rate moderate.

Propagation: By hardwood cuttings.

20 Diseases and pests: No susceptibility or resistance to diseases
or pests known to affect *Thuja* plants has been observed to
date.

Cold hardiness: 'RutThu#1' has been observed to perform
well in USDA Cold Hardiness Zone 8. The plant has not
been tested in all hardiness zones. No damage was
observed one winter when the temperatures dropped to 6°
F.

What is claimed is:

1. A new and distinct cultivar of the *Thuja occidentalis*
plant named 'RutThu#1' substantially as illustrated and
described herein.
