A new *Dianthus* plant particularly distinguished by having double flowers with a dark pink, purple bicolor, and an upright plant habit, is disclosed.

1 Drawing Sheet**1**Genus and species: *Dianthus caryophyllus*.

Variety denomination: 'KLEDP14206'.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new and distinct variety of *Dianthus*, botanically known as *Dianthus caryophyllus* and hereinafter referred to by the variety name 'KLEDP14206'. 'KLEDP14206' originated from a branch mutation of the proprietary female parent 'DCP 2009-1003' (unpatented) in May 2010 in a greenhouse in Latina, Italy.

In 2010 'KLEDP14206' was first vegetatively propagated by vegetative cuttings. 'KLEDP14206' was found to reproduce true to type in successive generations of asexual propagation in Stuttgart, Germany via stem cuttings.

SUMMARY

The following are the most outstanding and distinguishing characteristics of this new variety when grown under normal horticultural practices in Stuttgart, Germany.

1. Double flowers with a dark pink, purple bicolor; and
2. An upright plant habit.

DESCRIPTION OF THE PHOTOGRAPH

This new *Dianthus* plant is illustrated by the accompanying photograph which shows an overall view of the plant. The colors shown are as true as can be reasonably obtained by conventional photographic procedures.

The photograph shows the overall plant habit of the plant. The plant is about 5 months-old grown in Stuttgart, Germany in May 2012.

DESCRIPTION OF THE NEW VARIETY

The following detailed descriptions set forth the distinctive characteristics of 'KLEDP14206'. The data which define

2

these characteristics were collected from asexual reproductions carried out in Stuttgart, Germany. Data was collected on five month-old plants grown in a greenhouse in Stuttgart, Germany in February 2014. Color references are to The R.H.S. Colour Chart of The Royal Horticultural Society of London (R.H.S.), 5th edition (2007).
