*Primary Examiner* — June Hwu(74) *Attorney, Agent, or Firm* — Steptoe & Johnson LLP(57) **ABSTRACT**

A *chrysanthemum* plant named 'Zanmuaval Yelimp' characterized by its medium sized blooms with yellow ray florets and prolific branching; natural season flower date October 19; blooming for a period of 5 weeks.

**3 Drawing Sheets****1**

Botanical designation: *Chrysanthemum×morifolium* Ramat.

Cultivar denomination: 'Zanmuaval Yelimp'.

**RELATED CULTIVARS**

The new plant is a flower color mutant of 'Zanmuaval'.

**BACKGROUND OF THE INVENTION**

The present invention relates to a new and distinct cultivar of *chrysanthemum* plant, botanically known as *Chrysanthemum×morifolium* Ramat., commercially known as a garden mum, and hereinafter referred to by the cultivar denomination 'Zanmuaval Yelimp'. 'Zanmuaval Yelimp' is a product of a breeding and selection program which had the objective of finding flower color mutants from existing parent plants. The new plant comprises a whole plant mutant of the parent *chrysanthemum* named 'Zanmuaval' (U.S. Plant Pat. No. 22,659). Plants from the new cultivar 'Zanmuaval Yelimp' differ from plants of the female parent in the color of the ray-florets. The ray-florets of the parent are purple, while those of the new plant are yellow.

The new cultivar was discovered as a flower color mutant in May 2008 by Henricus Cornelius Maria Jacobs in a controlled environment (greenhouse) in Rijenhout, the Netherlands. The first act of asexual reproduction of 'Zanmuaval Yelimp' was accomplished when after planting of the new plant as a motherplant in July 2008, vegetative cuttings from this 'Zanmuaval Yelimp' were taken and propagated further in Rijenhout, the Netherlands. In summer, about 6-8 days are needed to initiate roots in cuttings of the new cultivar, after another 5 days rooted plants are formed. The new cultivar has been found to retain its distinctive characteristics through successive propagations.

**BRIEF DESCRIPTION OF THE DRAWINGS**

The present invention of a new and distinct variety of *chrysanthemum* (of about 22 weeks) is shown in the accom-

**2**

panying drawings, the color being as nearly true as possible with color photographs of this type.

FIG. 1 shows a plant of the cultivar in full bloom.

FIG. 2 shows the various stages of blooms of the new cultivar.

FIG. 3 shows the various stages of foliage of the new cultivar.

**DESCRIPTION OF THE INVENTION**

10 The observations and measurements were gathered from plants in the period of 21 to 26 weeks of age grown outdoor in Rijenhout, the Netherlands, under natural day length and temperature and planted in week 23 in 2015. The natural blooming date of this crop was October 19 (week 43). The 15 average height of the plants was 30 cm. No growth retardants were used. No tests were done on disease or insects resistance or susceptibility. No tests were done on cold or drought resistance. This new variety produces medium sized blooms with yellow ray florets and a greenish center blooming for a period of five weeks.

20 From the cultivars known to the inventor the most similar existing cultivar in comparison to 'Zanmuaval Yelimp' is 'Zanmuaval Golden' (U.S. Plant Pat. No. 24,020). When 'Zanmuaval Golden' and 'Zanmuaval Yelimp' are being compared the following differences are noticed: The differences of 'Zanmuaval Golden' and 'Zanmuaval Yelimp' are (1). Plant vigor. And (2). Ray-floret color. (1) Plants of 'Zanmuaval Golden' are more vigorous than those of 'Zanmuaval Yelimp'. (2) Ray-florets of 'Zanmuaval Golden' are more intensively yellow colored than those of 'Zanmuaval Yelimp'.

25 The following is a description of the plant and characteristics that distinguish 'Zanmuaval Yelimp' as a new and distinct variety.

The color designations are taken from the plant itself.

30 Accordingly, any discrepancies between the color designations and the colors depicted in the photographs are due to photographic tolerances. The color chart used in this description is: The Royal Horticultural Society Colour chart, edition 2001.

TABLE 1

Botanical Description of <i>Chrysanthemum × morifolium</i> Ramat. 'Zanmuaval Yelimp'	
Bud	
Size:	Small; cross-section 5 mm, height 3 mm
Shape:	Round
Texture:	Pubescent
Outside color:	Greyed-green 191B
Phyllaries	
Number:	18-20, arranged in 3 rows
Shape:	Elliptic
Apex:	Acute
Base:	Truncate
Margin:	Entire
Color:	Upper side: Greyed-green 191B Lower side: Green 138A
Length and width:	10 mm; 1 mm
Texture:	Pubescent
Inflorescences	
Type:	Double
Height:	2.5 cm
Diameter:	4.5 cm
Peduncle length:	5-6 cm
Peduncle color:	Green 139C
Peduncle diameter:	2 mm
Peduncle texture:	Pubescent
Peduncle strength:	Weak
Number per branch:	About 5-6 inflorescences
Duration of flowering:	5 weeks
Seeds (after outcrossing):	Produced in small quantities, ovate, Greyed-brown 199A, length 1.5 mm, diameter 0.5 mm; texture: rough with ribs
Fragrance:	Faint chrysanthemum odor
Color inflorescences	
Center of inflorescence:	Yellow-green 150B
Color of upper side of ray florets:	Outer rows: Yellow 12A; Inner rows: Yellow green 150B
Color of lower side of ray florets:	Outer rows: Yellow 10C; Inner rows: Yellow-green 150B
Tonality from distance:	A garden mum with yellow blooms and a greenish center
Color of ray florets after aging of the plant:	Yellow 12B
Ray florets	
Number of types:	Two
Type:	Predominantly ligulate, few spatulate.
Texture:	Upper and lower side smooth
Number:	180 to 200
Shape:	Elliptic
Apex:	Dentate
Base:	Attenuate
Cross-section:	Flat
Longitudinal axis:	Straight
Length of corolla tube:	2-3 mm
Diameter corolla tube:	1 mm
Ray floret margin:	Entire
Ray floret length:	0.8-2 cm
Ray-floret width:	2-5 mm
Disc florets	Absent
Receptacle	
Color:	Yellow-green 145D
Shape:	Domed raised
Height:	3 mm
Diameter:	4 mm
Reproductive Organs	
Androecium:	Absent
Pollen:	Absent
Gynoecium:	Present on ray florets
Style color:	Yellow-green 154C

4

TABLE 1-continued

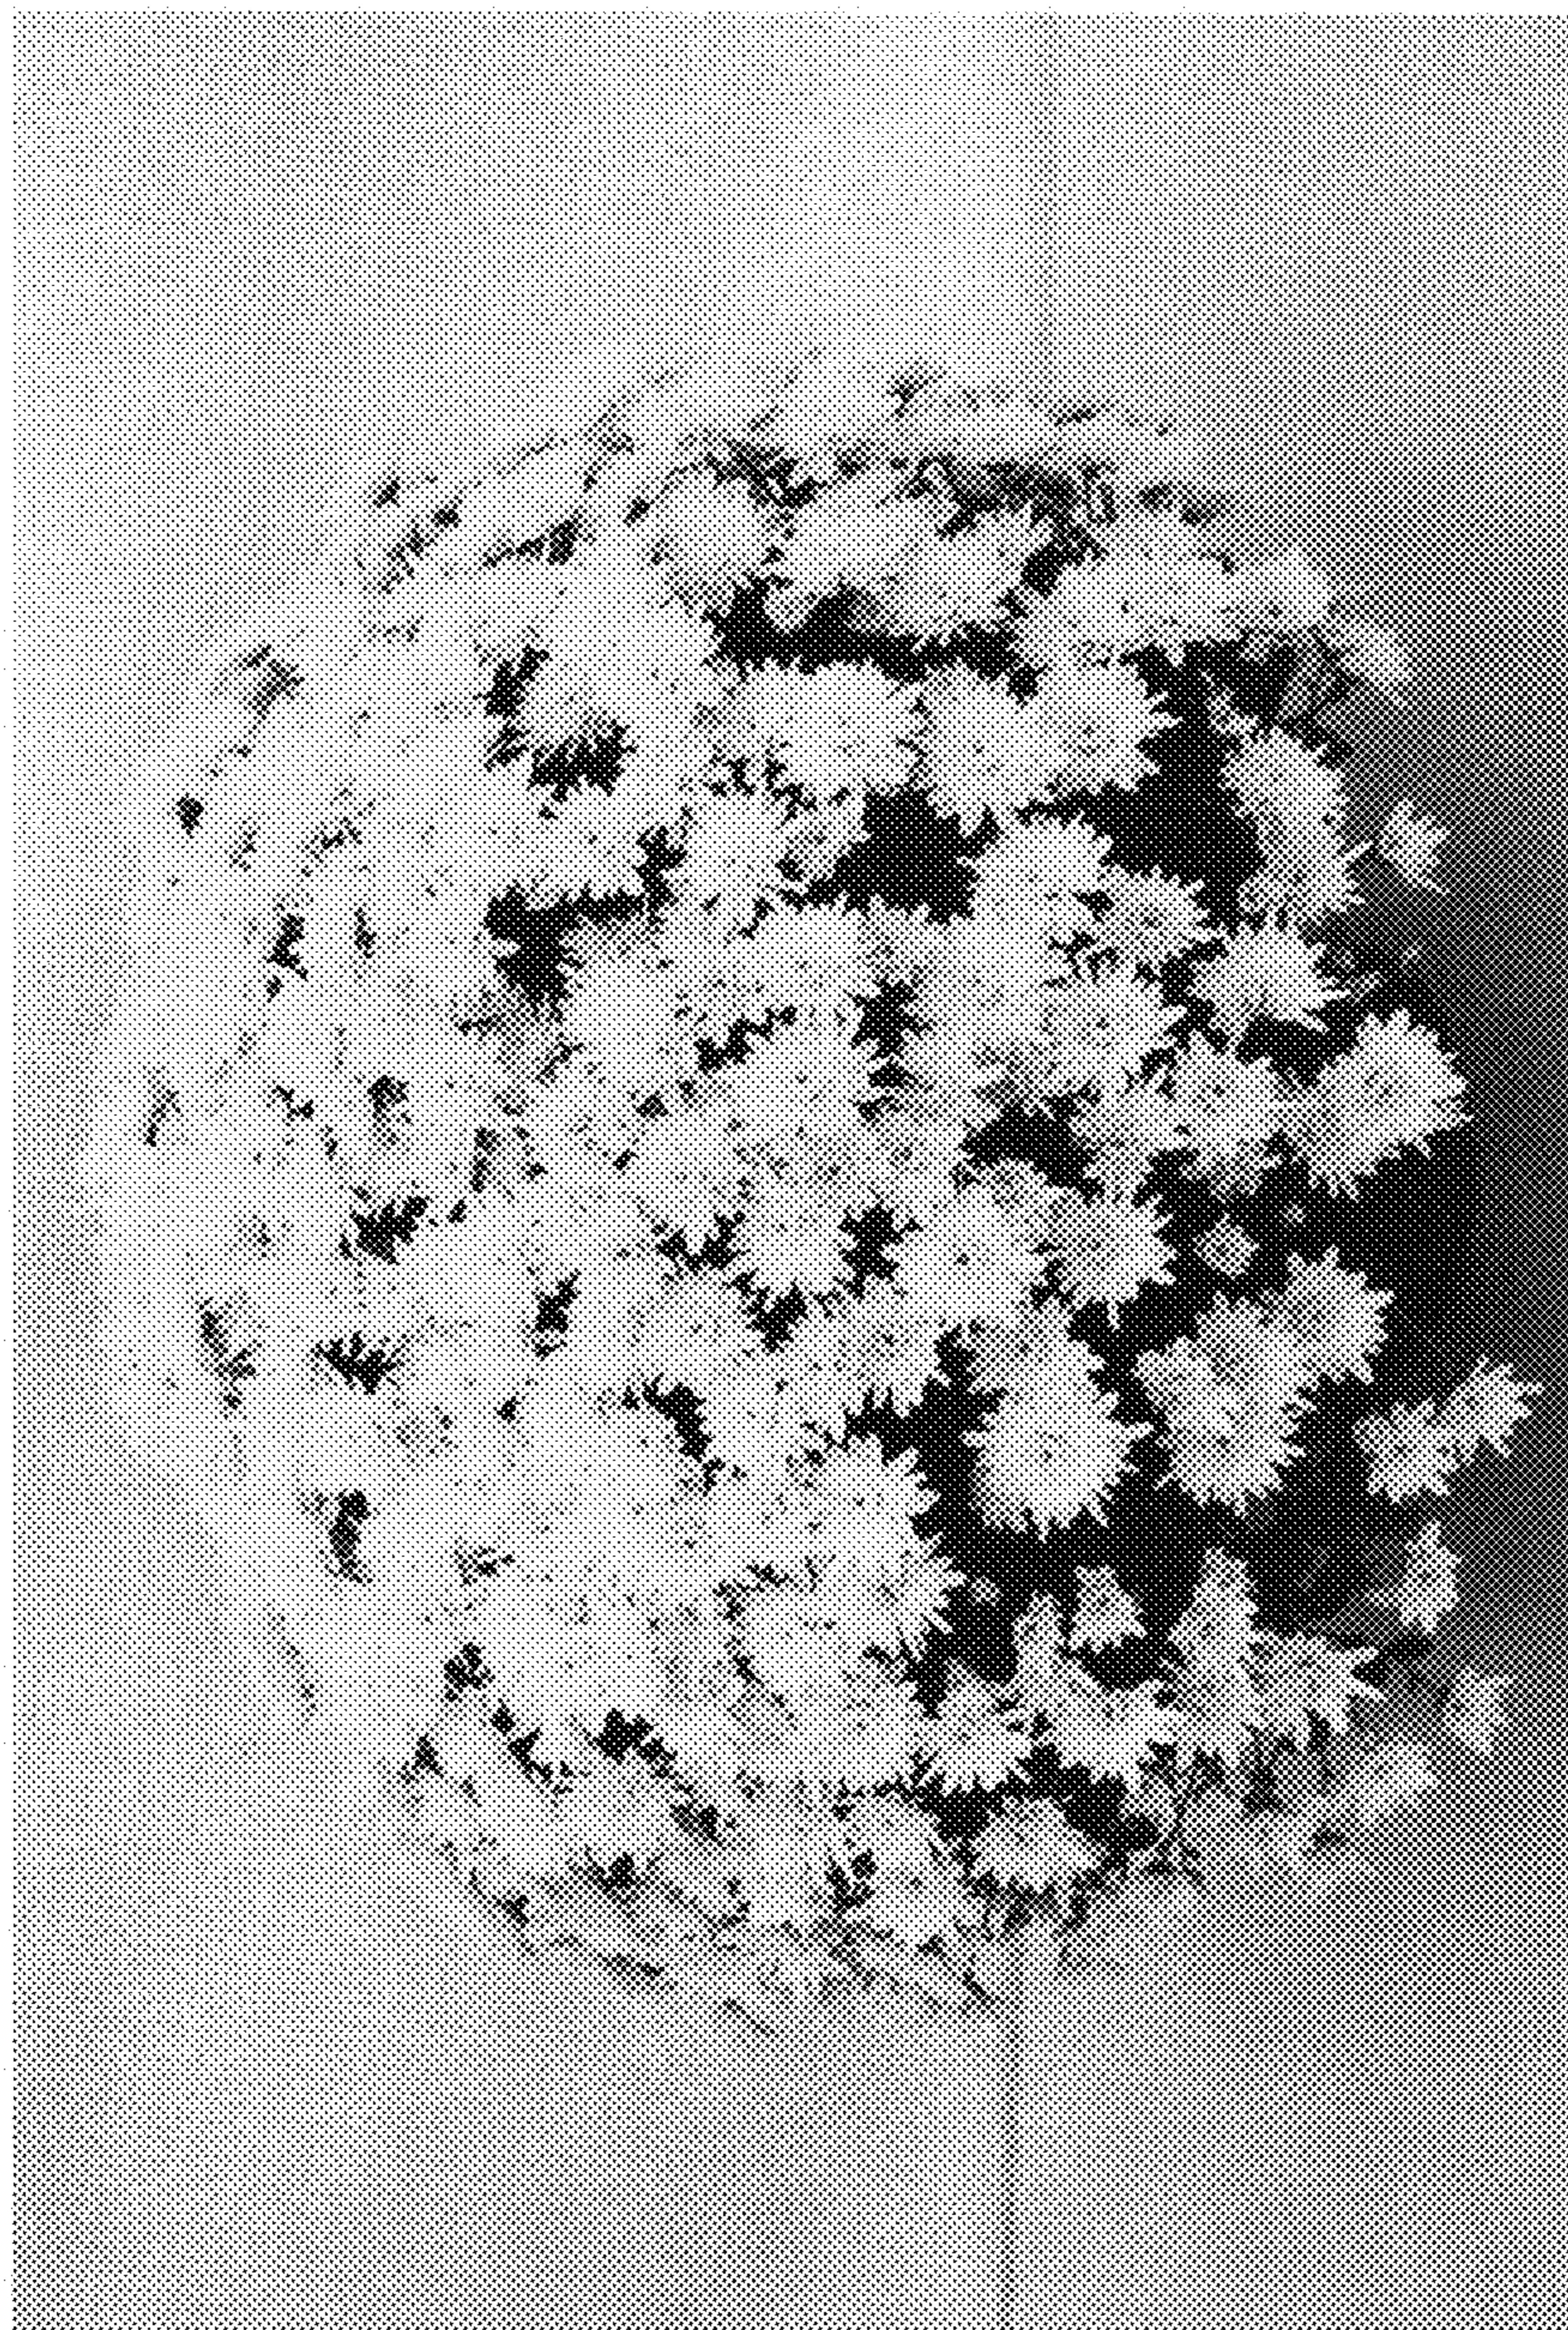

Botanical Description of <i>Chrysanthemum × morifolium</i> Ramat. 'Zanmuaval Yelimp'	
5	Style length: 4 mm Stigma color: Yellow 7A Stigma width: 1 mm Ovary: Enclosed in calyx Ovary color: Yellow-green 149D Plant
10	Type: Bushy Growth habit: Spherical shape Growth rate: Medium Height: 30 cm Width: 45-50 cm 15 Stem color: Greyed-brown 199A Stem strength: Weak Stem brittleness: Brittle Stem anthocyanin coloration: Not observed Internode length: 2 cm Length of lateral branch: From top to bottom 20 cm Lateral branch color: Green 138B Lateral branch, attachment: Weak Lateral branch diameter: 2 mm Lateral branch texture: Pubescent with ribs Branching(average number of lateral branches): Medium with 8-9 breaks after pinching Natural season blooming date: October 19 (week 43) in Rijnsenhout, the Netherlands. 20 Root habits: Fine, freely branching Root color: White 155D Rooting time: 6-8 days, formation rooted plants: 12-14 days Foliage
25	Leaf glossines: Upper side: weak; Lower side: very weak Leaf color: Upper side: Green 137A; Lower side: Green 138A Color midvein: Upper side: Yellow-green 147D; Lower side: Yellow-green 148D 30 Size: Small; length 2.5-4 cm, width 1.8-3 cm Quantity (number per lateral branches): 12-14 Shape: Elliptic Texture upper side: Sparsely pubescent Texture under side: Pubescent Venation arrangement: Pinnate Shape of margin: Serrated Shape of base of sinus between lateral lobes: Rounded Margin of sinus between 40 lateral lobes: Diverging Shape of base: Acute to truncate Apex: Mucronulate Petiole attitude: Moderately upwards Petiole length: 0.3-0.8 cm Petiole diameter: 2-4 mm Petiole color: Yellow-green 147D 50 Stipule: Lacking
55	Differences with the comparison variety, when grown under identical conditions

TABLE 2

	'Zanmuaval Yelimp'	'Zanmuaval Golden'
Plant width	45 cm	50 cm
Ray-floret color	Yellow 12A	Yellow 13A

I claim:

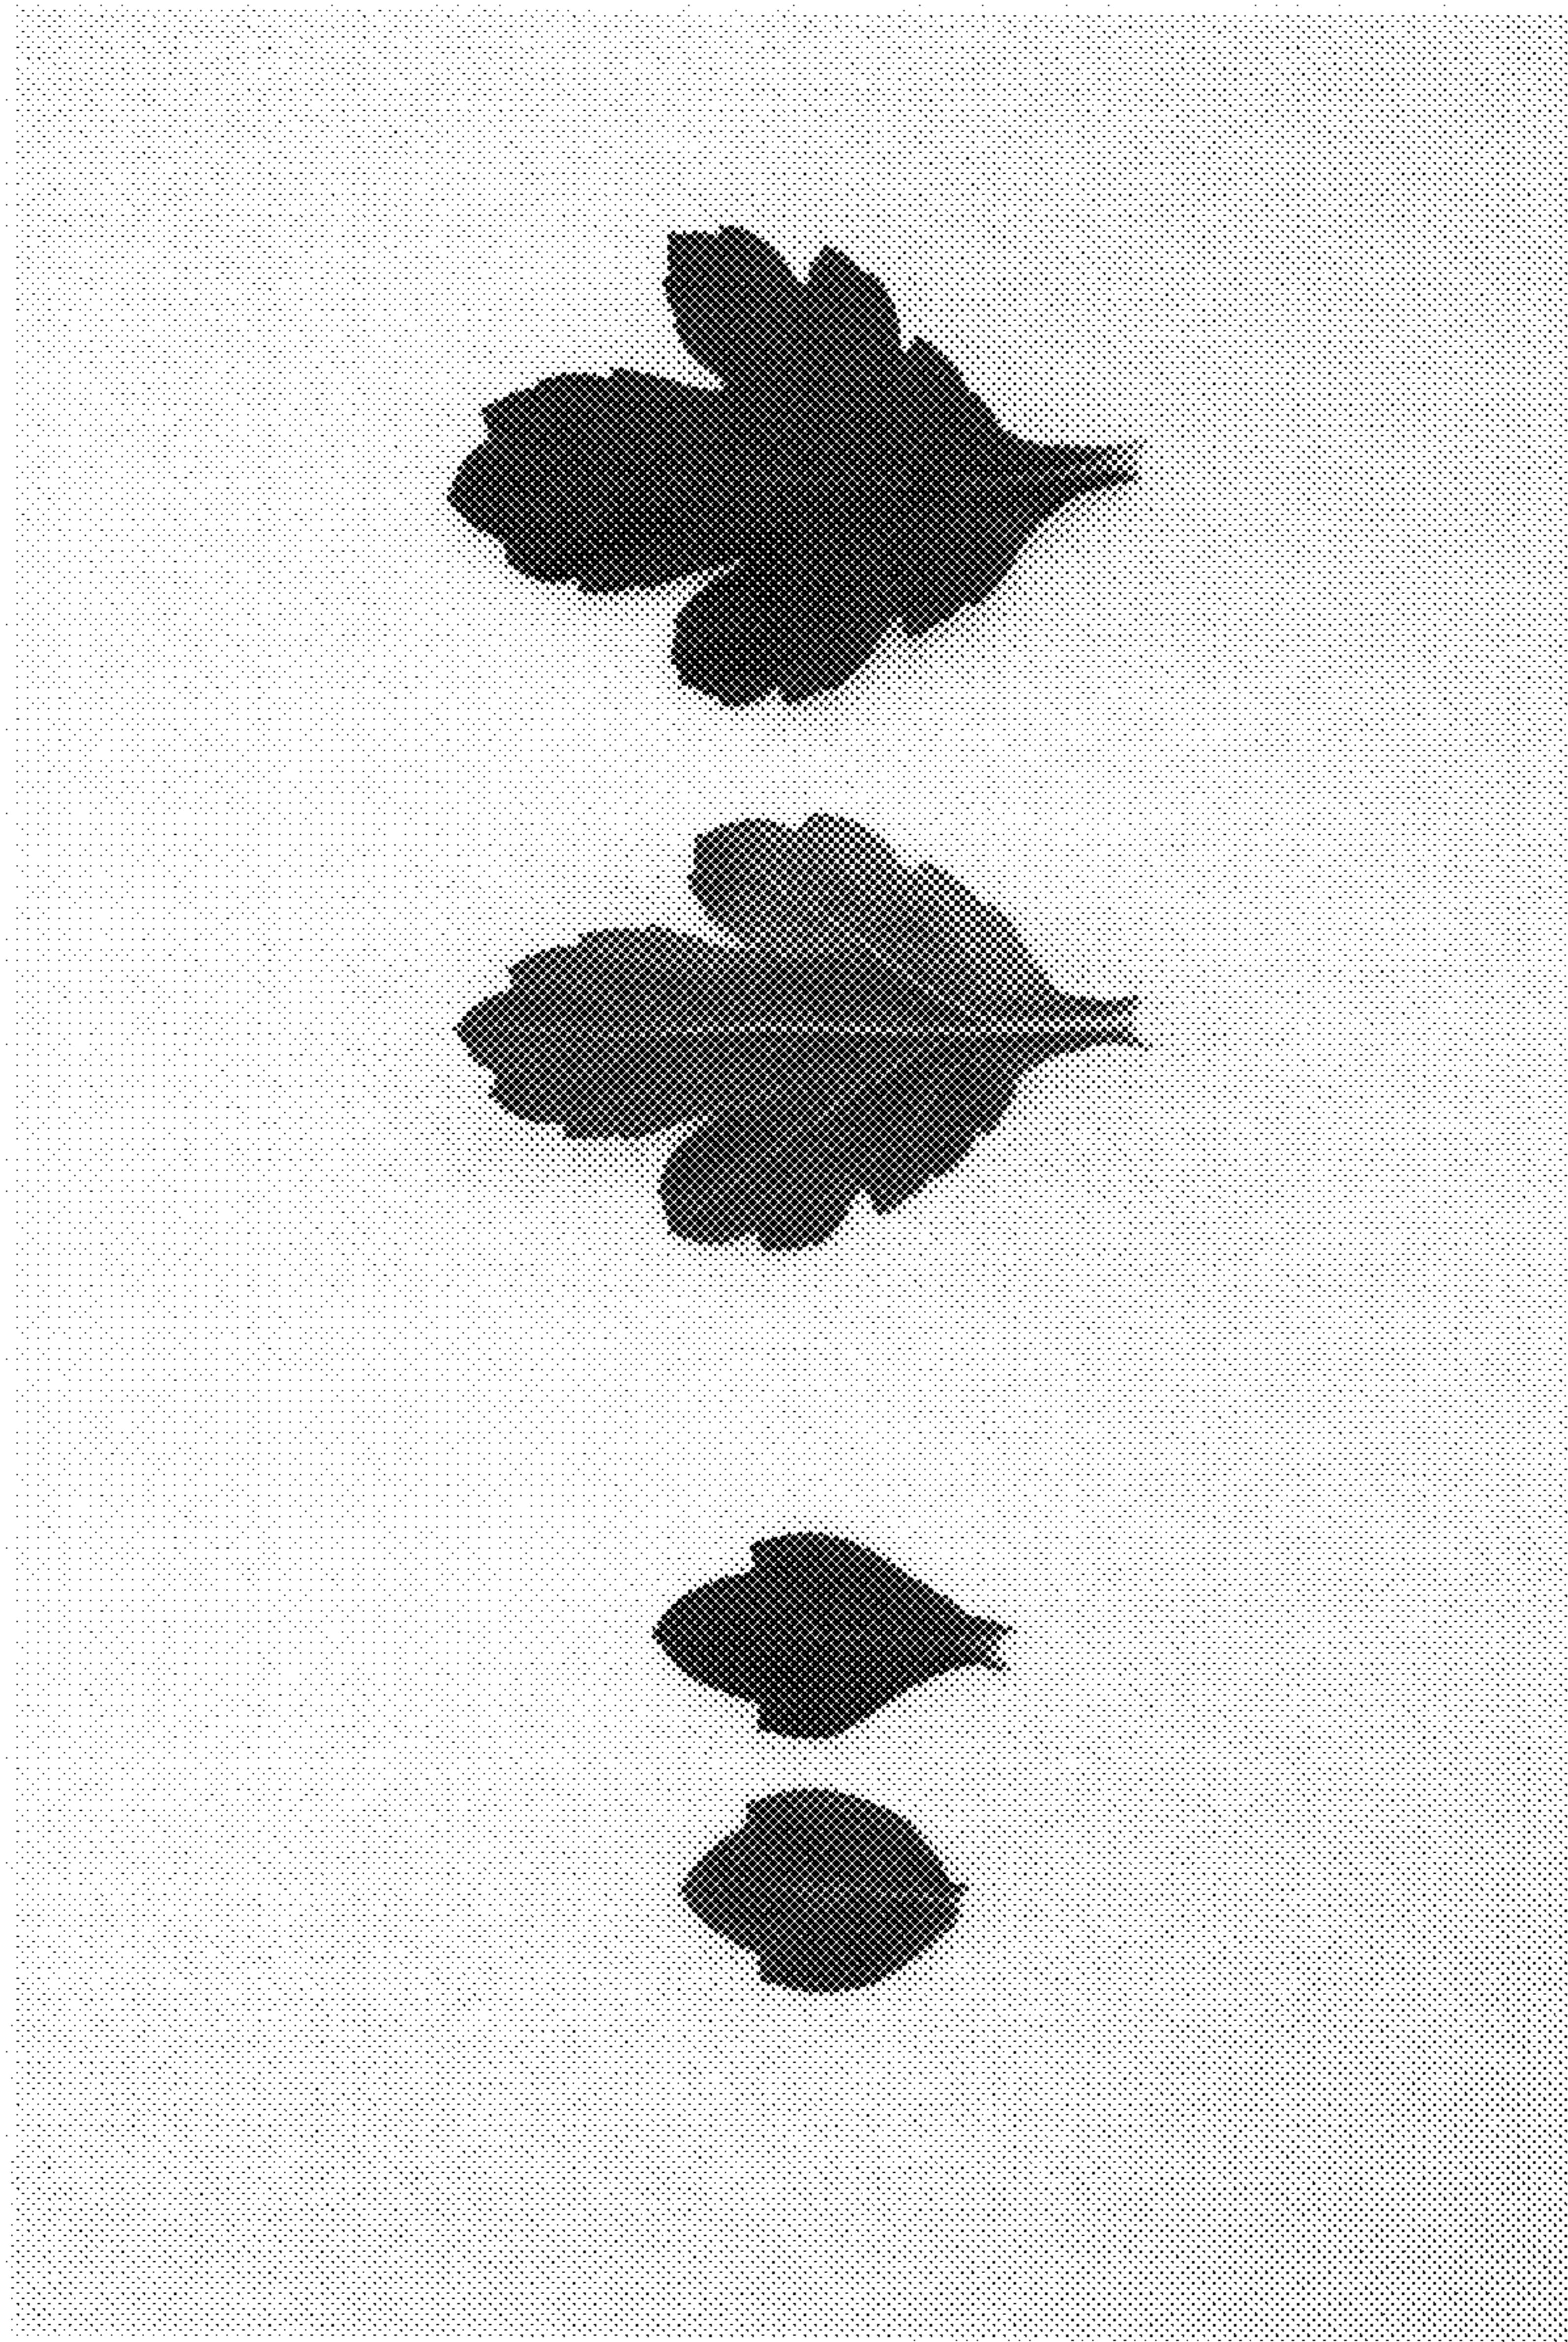

1. A new and distinct *chrysanthemum* plant named 'Zanmuaval Yelimp' as described and illustrated.
