A new *Calibrachoa* plant named 'CBRZ0010' particularly distinguished by the mid-sized pink flower with a yellow eye inside the flower at the base of the petals, green foliage, good branching, early to medium flowering, and a moderately compact plant habit, and has little sensitivity to soil pH.

1 Drawing Sheet**1**

Latin name of the genus and species of the plant claimed:
Calibrachoa hybrida.

Varietal denomination: 'CBRZ0010'.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new *Calibrachoa*, botanically known as *Calibrachoa hybrida*, and hereinafter referred to by the variety name 'CBRZ0010'.

'CBRZ0010' is a product of a planned breeding program. The new cultivar has mid-sized pink flowers with a large yellow center that extends inside the throat of the flower, green foliage, good branching, late flowering, and a moderately compact, semi-trailing plant habit, and has little sensitivity to soil pH.

'CBRZ0010' originated from a hybridization made during the summer of 2010 in a greenhouse in Gilroy, Calif., USA. The female parent was a breeding line known as 'CAL2744-3' which had rose colored flowers with an eye. The male parent of 'CBRZ0010' was an unpatented proprietary plant characterized as a blue rose flowered plant, known as 'CAL2626-1', originating from a seedling selected in Gilroy, Calif.

The resulting seeds were sown in May 2011 and 'CBRZ0010' was selected as one flowering plant within the progeny of the stated cross in August 2011 in a controlled environment in Gilroy, Calif.

The first act of asexual reproduction of 'CBRZ0010' was accomplished when vegetative cuttings were propagated from the initial selection in the fall of 2011 in a controlled environment in Gilroy, Calif.

BRIEF SUMMARY OF INVENTION

Horticultural examination of plants grown from cuttings of the plant initiated in the spring of 2012, and continuing thereafter, has demonstrated that the combination of char-

2

acteristics as herein disclosed for 'CBRZ0010' are firmly fixed and are retained through successive generations of asexual reproduction.

'CBRZ0010' has not been observed under all possible environmental conditions. The phenotype may vary significantly with variations in environment such as temperature, light intensity, and day length.

A Plant Breeder's Right for this cultivar has not been applied for. 'CBRZ0010' has not been made publicly available prior to the effective filing date of this application, notwithstanding any disclosure that may have been made less than one year prior to the effective filing date of this application by the inventor or another who obtained 'CBRZ0010' directly from the inventor.

The following traits have been repeatedly observed and are determined to be basic characteristics of the new variety. The combination of these characteristics distinguishes this *Calibrachoa* as a new and distinct variety.

BRIEF DESCRIPTION OF THE PHOTOGRAPHS

The accompanying photographic drawing shows typical flower and foliage characteristics of 'CBRZ0010' with colors being as true as possible with an illustration of this type.

The photographic drawing shows in FIG. 1 a close-up of the flowers and in FIG. 2 a flowering plant of the new variety.

DETAILED BOTANICAL DESCRIPTION

The aforementioned photographs were taken in April 2017 in Gilroy, Calif.,

The measurements and observations were made on in Gilroy, Calif. on plants grown in an indoor trial.

Color references are made to The Royal Horticultural Society Colour Chart (R.H.S.) 2001.
