(57) **ABSTRACT**

A new *Osteospermum* plant particularly distinguished  
flower color where the apical portion is yellow and the basal  
portion is purple and an upright growth habit, is disclosed.

**1 Drawing Sheet**

**1**

Genus and species: *Osteospermum ecklonis*.  
Variety denomination: 'KLEOE17336'.

**BACKGROUND OF THE NEW PLANT**

The present invention comprises a new and distinct vari-  
ety of *Osteospermum*, botanically known as *Osteospermum*  
*ecklonis*, and hereinafter referred to by the variety name  
'KLEOE17336'. 'KLEOE17336' originated from a cross-  
pollination conducted in May to October 2013 in Nairobi,  
Kenya between the proprietary female *Osteospermum* vari-  
ety 'OE-2007-0028' (unpatented), and the male *Osteosper-*  
*mum* variety 'BALVOYELO' (U.S. Plant Pat. No. 21,122),  
also commercially known as VOLTAGE 'Yellow'.

The seeds from the cross were sown and plants were  
grown in a greenhouse for evaluation, where an individual  
plant designated 'KLEOE17336' was selected from the  
group of plants in May 2014 in Stuttgart, Germany. In  
October 2014 in Stuttgart, Germany, 'KLEOE17336' was  
first vegetatively propagated by vegetative terminal cuttings.  
'KLEOE17336' was found to reproduce true to type in  
successive generations of asexual propagation via vegetative  
terminal cuttings.

**SUMMARY**

The following are the most outstanding and distinguish-  
ing characteristics of this new variety when grown under  
normal horticultural practices in Stuttgart, Germany.

1. Flower color where the apical portion is yellow and the  
basal portion is purple; and
2. An upright growth habit.

**DESCRIPTION OF THE PHOTOGRAPH**

This new *Osteospermum* plant is illustrated by the accom-  
panying photograph which shows the plant's overall plant  
habit including form, foliage, and flowers. The photograph  
is of a 10-week-old plant grown in a greenhouse in Stuttgart,

**2**

Germany in April 2016. The colors shown are as true as can  
be reasonably obtained by conventional photographic pro-  
cedures.

**DESCRIPTION OF THE NEW VARIETY**

The following detailed descriptions set forth the distinc-  
tive characteristics of 'KLEOE17336'. The data which  
define these characteristics were collected on plants after 11  
weeks (at the time of flowering) in Stuttgart, Germany in  
April 2018. The plants were treated with CYCOCEL three  
times. Color references are to The R.H.S. Colour Chart of  
The Royal Horticultural Society of London (R.H.S.), 5<sup>th</sup>  
edition (2007).
