(57) **ABSTRACT**

A new and distinct cultivar of *Lavandula angustifolia* plant named 'KERBEEEDARK' is disclosed, characterized, by a compact, bushy and dense plant habit. Plants are free flowering, with uniquely short peduncles and dark violet flowers. The new variety is a *Lavandula angustifolia*, suitable for outdoor landscape and container use.

3 Drawing Sheets

1

Latin name of the genus and species: *Lavandula angustifolia*.

Variety denomination: 'KERBEEEDARK'.

BACKGROUND OF THE INVENTION

The new cultivar is the product of a planned breeding program under the direction of the inventors, David Kerley, Priscilla Kerley, Sarah Kerley, and Timothy Kerley, all citizens of the United Kingdom. The objective of the breeding program was to produce new *Lavandula angustifolia* cultivars for commercial ornamental purposes. During the Summer of 2013, the inventors performed an open-pollination of 5 *Lavandula angustifolia* varieties, which included 4 proprietary, unnamed, unpatented *Lavandula angustifolia* varieties, and the unpatented proprietary variety *Lavandula angustifolia* BEEZEE 'Power Blue'. This resulted in the selection of the new variety 'Kerbeedark' in July 2014. The breeding program and selection all took place at a commercial nursery in Cambridge, the United Kingdom.

Asexual reproduction of the new cultivar 'KERBEEEDARK' was first performed in Cambridge, UK in August 2014 by terminal vegetative cuttings and has shown that the unique features of this cultivar are stable and reproduced true to type in successive generations.

SUMMARY OF THE INVENTION

The cultivar 'KERBEEEDARK' has not been observed under all possible environmental conditions. The phenotype

2

may vary somewhat with variations in environment such as temperature, day length, and light intensity, without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'KERBEEEDARK' These characteristics in combination distinguish 'KERBEEEDARK' as a new and distinct *Lavandula* cultivar:

1. Compact, bushy plants.
2. Short peduncles.
3. Free flowering.
4. Dark violet flowers.

PARENTAL COMPARISON

Exact parents cannot be identified for comparison, as this was an open-pollination and seed was bulk collected. In general, the new variety is more compact and floriferous than the five varieties used in the open-pollination. The new variety has a darker flower color than the possible parent, 'Power Blue'.

COMMERCIAL COMPARISON

Plants of the new cultivar 'KERBEEEDARK' are similar to plants of the unpatented variety *Lavandula angustifolia*

Color when opening.—Upper surface: RHS Violet N88B.

Color when opening.—Lower surface: RHS Violet-Blue 90C.

Color when fully open.—RHS Violet-Blue 90B.

Corolla tube color.—Exterior RHS Violet-Blue 90D.

Interior RHS Violet-Blue 91C.

Calyx shape.—Tube.

Calyx width.—0.3 cm.

Sepal length.—0.6 cm.

Sepal texture.—Very hirsute.

Sepal color.—Flower open: RHS Violet-Blue N92D.

Sepal color.—Fully open: RHS Violet-Blue N92D.

Inflorescence bracts:

Bract width.—0.6 cm.

Bract height.—0.4 cm.

Bract color.—Near RHS Grey-Brown 199C.

Peduncle:

Peduncle length.—9.2 cm.

Peduncle diameter.—0.2 cm.

Color.—RHS Yellow-Green 148B.

Texture.—Pubescent.

Branching.—Lateral branching above foliage not observed.

Other: Infertile bracts not observed.

REPRODUCTIVE ORGANS

Filament length: 0.3 cm.

Anther length: 0.2 cm.

Anther color: RHS Greyed-Orange 165A.

Pollen color: RHS Greyed-Orange 165C.

Pollen amount: Very sparse.

Pistil length: 0.8 cm.

Style length: 0.5 cm.

Style color: RHS Greyed-Green 193D.

Stigma color: Near RHS Yellow-Green 146D.

OTHER CHARACTERISTICS

Fragrance: Strong lavender scent, both flowers and foliage.

Disease resistance: Neither resistance nor susceptibility to diseases or pests has been observed in this variety.

15 Drought tolerance and cold tolerance: Hardy perennial.

Tolerates high temperature to at least 32° C. Tolerates low temperatures to -12° C. While specific drought tolerance has not been observed, once plants are established very little water is necessary to maintain plants.

20 Fruit/seed production: Fruit and seed production not observed.

What is claimed is:

25 1. A new and distinct cultivar of *Lavandula* plant named 'KERBEEDARK' as herein illustrated and described.
