A new *Pelargonium* plant named 'PEQZ0077' particularly distinguished by orange-red colored inflorescences with semi-double florets, held above dark green foliage, on a vigorous mounding plant.

1 Drawing Sheet**1**

Latin name of the genus and species of the plant claimed:
Pelargonium interspecific.

Varietal denomination: 'PEQZ0077'.

BACKGROUND OF THE NEW PLANT

The present invention comprises a new *Pelargonium*, botanically known as *Pelargonium* interspecific, and hereinafter referred to by the variety name 'PEQZ0077'.

'PEQZ0077' is a product of a planned breeding program. The new cultivar 'PEQZ0077' has orange-red colored inflorescences with semi-double florets, held above dark green foliage, on a vigorous mounding plant.

'PEQZ0077' originates from a hybridization in a controlled breeding program made in July 2015, in a greenhouse in Enkhuizen, The Netherlands. The female parent was an unpatented plant of *Pelargonium* x *hortorum* parentage identified as 'PEZ-AZ3272-07' with darker colored and larger florets and a larger plant habit when compared to 'PEQZ0077'.

The male parent of 'PEQZ0077' was an unpatented, proprietary plant of *Pelargonium* x interspecific parentage, identified as '11063-1' with lighter green foliage and orange-red, more single florets when compared to 'PEQZ0077'. The resultant seed was sown in December 2013.

'PEQZ0077' was selected as one flowering plant within the progeny of the stated cross in May 2014 in a greenhouse in Enkhuizen, The Netherlands.

The first act of asexual reproduction of 'PEQZ0077' was accomplished when vegetative cuttings were propagated from the initial selection in June 2014 in a greenhouse in Enkhuizen, The Netherlands.

BRIEF SUMMARY OF INVENTION

Horticultural examination of plants grown from cuttings of the plant initiated in May 2014 in Enkhuizen, The Netherlands and continuing thereafter, has demonstrated

2

that the combination of characteristics as herein disclosed for 'PEQZ0077' are firmly fixed and are retained through successive generations of asexual reproduction.

'PEQZ0077' has not been observed under all possible environmental conditions. The phenotype may vary significantly with variations in environment such as temperature, light intensity, and day length.

A Plant Breeder's Right for this cultivar has not yet been applied for. 'PEQZ0077' has not been made publicly available prior to the effective filing date of this application, notwithstanding any disclosure that may have been made less than one year prior to the effective filing date of this application by the inventor or another who obtained 'PEQZ0077' directly from the inventor.

The following traits have been repeatedly observed and are determined to be the basic characteristics of the new variety. The combination of these characteristics distinguishes this *Pelargonium* as a new and distinct variety.

BRIEF DESCRIPTION OF THE PHOTOGRAPHS

The accompanying photographic drawings show typical flower and foliage characteristics of 'PEQZ0077' with colors being as true as possible with an illustration of this type.

The photographic drawings show in FIG. 1, 1 flowering plant of the new variety and in FIG. 2, a close-up of an inflorescence.

DETAILED BOTANICAL DESCRIPTION

The plant descriptions and measurements were taken in Enkhuizen, The Netherlands in early June 2020 under natural light. These plants were approximately 16 weeks old and were grown in a 12 cm pots, in a greenhouse trial. The plants shown in the photographs were about 16 weeks old growing in a 12 cm pot in a greenhouse. The photographs were taken in June 2020.

Color references are made to The Royal Horticultural Society Colour Chart (R.H.S.) 2001.
