The organic phases were combined, dried, filtered and evaporated to obtain 0.23 g of the crude sought product which was purified by chromatography on silica eluting with a chloroform, isopropyl alcohol, ammonium hydroxide mixture 96-4-0,1%.

Stage C: (3aS,4R,7S,9R,10R,11R,13R,15R,15aR,18S)-4-ethyl-7-fluoro-3a,4,10,11,12,13,15,15a-octahydro-18-[[[(4-quinoleinyl)carbonyl]oxy]methyl]-11-methoxy-3a,7,9,11,13,15-hexamethyl-10-[[3,4,6-trideoxy-3-(dimethylamino)-.beta.-D-xylo-hexopyranosyl]oxy]-14,1-(nitrioloethano)-2H-oxacyclotetradecino[4,3-d]oxazole-2,6,8(7H,9H)-trione.

A mixture of 0.135 g of the product of Stage B and 2 ml of methanol was stirred for 24 hours followed by evaporating to dryness. The residue was taken up in ethyl acetate and 20 ml of 10% ammonium hydroxide were added. The mixture was stirred for 10 minutes followed by decanting, extracting with ethyl acetate, drying, filtering and evaporating. The residue was taken up in ether, filtered and dried to obtain the desired product with a rf=0.40 (CHCl<sub>3</sub>, MeOH, NH<sub>4</sub>OH=96-4-0.4, and with a mass spectrum MH<sup>+</sup>=683<sup>+</sup>.

## Example of Pharmaceutical Composition

## PHARMACOLOGICAL STUDY

## Method of Dilutions in Liquid Medium

A series of tubes were prepared in which the same quantity of nutritive sterile medium was distributed. Increasing quantities of the product to be studied were distributed into each tube and then each tube was seeded with a bacterial strain. After incubation for twenty-four hours in an oven at 37° C., the growth inhibition was evaluated by transillumination, which allowed the minimal inhibitory concentrations (M.I.C.) to be determined, expressed in micrograms/ml. The following results were obtained: (reading after 24 hours)
