

US00RE43073E

(19) United States

(12) Reissued Patent

Lovatt

(10) Patent Number:

US RE43,073 E

(45) Date of Reissued Patent:

Jan. 10, 2012

(54) FORMULATION OF PHOSPHORUS FERTILIZER FOR PLANTS

- (75) Inventor: Carol J. Lovatt, Riverside, CA (US)
- (73) Assignee: The Regents of the University of

California, Oakland, CA (US)

- (21) Appl. No.: 12/350,563
- (22) Filed: Jan. 8, 2009

Related U.S. Patent Documents

Reissue of:

(64) Patent No.: 7,160,350
Issued: Jan. 9, 2007
Appl. No.: 11/079,552
Filed: Mar. 10, 2005

U.S. Applications:

- (63) Continuation of application No. 10/987,286, filed on Nov. 12, 2004, now Pat. No. 7,160,349, which is a continuation of application No. 10/686,411, filed on Oct. 14, 2003, now Pat. No. 6,896,714, which is a continuation of application No. 10/341,966, filed on Jan. 13, 2003, now Pat. No. 6,645,268, which is a continuation of application No. 09/637,621, filed on Aug. 11, 2000, now Pat. No. 6,929,673, which is a continuation of application No. 09/126,233, filed on Jul. 30, 1998, now Pat. No. 6,113,665, which is a continuation of application No. 08/642,574, filed on May 3, 1996, now Pat. No. 5,830,255, which is a continuation of application No. 08/192,508, filed on Feb. 7, 1994, now Pat. No. 5,514,200.

(57) ABSTRACT

Concentrated phosphorus fertilizers are disclosed that comprise a buffered composition of an organic acid and salts thereof and a phosphorous-containing acid and salts thereof. The concentrated phosphorus fertilizers can be diluted with water of pH ranging from about 6.5 to about 8.5 at ratios of concentrate to water at about 1:40 to about 1:600 to result in a fertilizer having a pH in the range acceptable for foliar uptake of phosphorus.

No. 6,929,673, which issued Aug. 16, 2005, which is a continuation of U.S. application Ser. No. 09/126,233, filed Jul. 30, 20 1998, now U.S. Pat. No. 6,113,665, which is a continuation of U.S. application Ser. No. 08/642,574, filed May 3, 1996, now U.S. Pat. No. 5,830,255, which issued Nov. 3, 1998, which application was re-examined as B1 5,830,255 (certificate issued Jul. 11, 2000), which is a continuation of U.S. appli- 25 cation Ser. No. 08/192,508, filed Feb. 7, 1994, now U.S. Pat. No. 5,514,200, which issued May 7, 1996.

BACKGROUND OF THE INVENTION

Fertilizers are added to the soil of crops or in some cases they can be applied directly to crop foliage to supply elements needed for plant nutrition. Seventeen elements are known to be essential to the health and growth of plants. Typically, nitrogen, phosphorus, and potassium are provided in the 35 greatest quantity. With increasing knowledge of the role of each of the nutrients essential to plants, there is a better understanding of the importance of providing a given nutrient at the appropriate stage of phenology. To accomplish this, rapid changes in fertilizer formulations and methods of appli-40 cation have been necessary.

Another factor changing fertilization formulations and methods is [due to] *the* pressure from federal, state and local regulatory agencies and citizen groups to reduce the total amount of fertilizer in general, and of specific nutrients in 45 particular, being applied to the soil. Additionally, the loss of registration of existing synthetic plant growth regulators and organic pesticides and the prohibitively high costs involved in the successful registration of new ones, also [plays a role] *play roles* in the changing arena of crop fertilization.

The principal source of phosphorus for the fertilizer industry is derived from the ores of phosphorus-containing minerals found in the Earth's crust, termed phosphate rock. Elemental phosphorus does not exist in nature; plants utilize phosphorus as the dihydrogen phosphate ion (H₂PO₄⁻). 55 While untreated phosphate rock has been used for fertilizer, it is most commonly acidulated with dilute solutions of strong mineral acids to form phosphoric acid, which is more readily absorbed by crops.

Until recently, phosphate and polyphosphate compounds 60 were considered the only forms in which phosphorus could be supplied to plants to meet the plant's nutritional need for phosphorus. Indeed, the only phosphite compound cited for use as a fertilizer in the Merck Index (M. Windhols, ed., 1983, 10th edition, p. 1678) is calcium phosphite (CaHPO₃). No 65 phosphite fertilizer formulations are listed in The Farm Chemical Handbook (Meister Publishing Co., 1993, Wil-

2

loughby, Ohio 834 p.) or Western Fertilizer Handbook (The Interstate, Danville, Ill. 288 p.) Historically, calcium phosphite was formed as a putative contaminant in the synthesis of calcium superphosphate fertilizers [McIntyre et al., Agron. J. 42:543-549 (1950)] and in one case, was demonstrated to cause injury to corn [Lucas et al., Agron. J. 71:1063-1065 (1979)]. Consequently, phosphite was relegated for use only as a fungicide (Alliete®; U.S. Pat. No. 4,075,324) and as a food preservative.

More recently, it has been shown that plants can obtain phosphorus from phosphite [Lovatt, C. J., Mar. 22, 1990, "Foliar phosphorus fertilization of citrus by foliar application of phosphite" In: Citrus Research Advisory Committee (eds) Summary of Citrus Research, University of California, Riverside, Calif. pp 25-26; Anon., May, 1990, "Foliar applications do double duty" In: L. Robison (ed) Citrograph Vol. 75, No. 7, p 161; Lovatt, C. J., 1990, "A definitive test to determine whether phosphite fertilization can replace phosphate fertilization to supply P in the metabolism of 'Hass' on 'Duke 7':—A preliminary report" California Avocado Society Yearbook 74:61-64; Lovatt, C. J.,1992]. Formulations based on phosphorous acid and hypophosphorous acid, as phosphite is, generally undergo oxidation to phosphate and thus lose the benefits that could be derived from the use of phosphite fertilization applications.

The phosphate and polyphosphate fertilizers currently used have a number of properties that compromise their desirability as fertilizers. Generally, they tend to form precipitates during storage and shipping. This limits the ability to formulate concentrated solutions of fertilizers. Additionally, formulations must generally be maintained at a narrow pH range to prevent precipitation, resulting in fertilizers that are limited to particular uses. Another drawback of phosphate fertilizers is that they are not readily taken up by the foliage of many plants and must instead be delivered to the soil for uptake by plant roots. The mobility of phosphate fertilizers in the soil is limited leading to rapid localized depletion of phosphorus in the rhizosphere and phosphorus deficiency of the plant. Frequent reapplication of phosphate fertilizers is undesirable because it leads to leaching of phosphate into the groundwater resulting in eutrophication of lakes, ponds and streams.

Phosphate and polyphosphate fertilizers have also been shown to inhibit the beneficial symbiosis between the roots of the plants and mycorrhizal fungi. They tend to support the growth of algae and promote bacterial and fungal growth in the rhizosphere, including the growth of pathogenic fungi and other soil-borne pests.

Even though phosphorus, once in the plant, is very phloem mobile (i.e. readily moving from old leaves to young tissues), phosphate is poorly absorbed through the leaves of most plant species. This is unfortunate because successful foliar phosphorus feeding would result in the application of less phosphate fertilizers to the soil and reduce phosphorus pollution of the ground water.

Accordingly, there is a need for a phosphorus fertilizer that can be utilized in irrigation systems and applied to foliage without the formation of precipitates that reduce nutrient availability and uptake by the plant and plug emitters and sprayers. There is also a need for new methods of fertilizer application that allow nutrients in a readily available form to be supplied at the exact time the plant needs them. This need includes the facility of a foliar product to be sold in a single formulation for use as a concentrated material for airplane or helicopter application or as a dilute solution for ground spray application and yet able to be maintained at a suitable pH. range optimal for leaf uptake despite the need to be diluted prior to application.

Additionally, there is a demand for phosphorus fertilizers that have the facility to be used as liquids or solids (granule or powder). There is also a demand for fertilizers that do more than just supply nutrients. It is desired that the fertilizers also have demonstrated plant growth regulator activity, increase the plants' resistance to pests, promote plant health in general and root health in particular, increase the production of allelopathic compounds, increase pre- and post-harvest quality, improve stress tolerance, enhance beneficial symbioses, and improve yield over existing traditional soil or foliar fertilizers.

SUMMARY OF THE INVENTION

Given the above-mentioned deficiencies and demands of fertilizers in general, and of phosphorus fertilizers in particular, it is an object of the present invention to provide phosphorus to plants in a formulation that renders phosphorus readily available to the plants under a number of application methods such as through soil, foliar uptake, irrigation, and other methods.

It is also an object that the phosphorus fertilizer formulations be conveniently formulated in concentrated solutions that are stable during storage and shipping.

Another object of the present invention is to provide a phosphorus fertilizer that is not as inhibitory to mycorrhizal ²⁵ fungi as traditional phosphate fertilizers.

It is a further object of the present invention to provide a phosphorus fertilizer that does not support the growth of algae to the same degree that traditional phosphate fertilizers do.

Additional objects and features of the invention will be ³⁰ apparent to those skilled in the art from the following detailed description and appended claims.

The above objects and features are accomplished by a concentrated phosphorus fertilizer comprising a buffered composition comprising an organic acid and salts thereof and 35 a phosphorus-containing acid and salts thereof. The concentrated phosphorus fertilizer can be diluted with water of pH ranging from about 6.5 to about 8.5 at ratios of concentrate to water at about 1:40 to about 1:600 to result in a fully solubilized fertilizer having a pH in a range acceptable for foliar 40 uptake of phosphorus.

In one embodiment, the phosphorous-containing acid is selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, and polyhypophosphorous acid and the organic acid is preferably 45 selected from the group consisting of dicarboxylic acids and tricarboxylic acids such as citrate.

In one embodiment, the concentrated phosphorus fertilizer is an essentially clear liquid devoid of precipitate that can be diluted at a ratio of about 1:40 to about 1:600 with water 50 having pH of about 6.5 to about 8.5, to result in a fertilizer having a pH of about 5.0 to about 7.0, and more preferably from about 5.5 to about 6.5, to facilitate the uptake of phosphorus by a variety of plants.

A method of providing phosphorus to plants is also disclosed. The method comprises diluting a concentrated phosphorus fertilizer comprising a buffered composition comprising an organic acid and salts thereof and a phosphorous-containing acid and salts thereof with water to form a substantially fully solubilized use-dilution fertilizer having a 60 pH in a range acceptable for foliar uptake of phosphorus, and applying the fertilizer to the plant foliage.

DETAILED DESCRIPTION OF THE INVENTION

The present invention provides phosphorus fertilizers essentially devoid of phosphate. The fertilizer comprises a

4

double or multiple buffer system of organic acids and their salts with [a] phosphorous-containing acids and their salts. The formulation stabilizes the phosphorous against oxidation to phosphate. Suitable phosphorous-containing acids are phosphorous acid and polyphosphorous acid, based generally on the formula H₃PO₃, and hypophosphorous acid and polyhypophosphorous acid, based generally on the formula H₃PO₂. Phosphite, the salt of phosphorous acid, has properties that are known to be beneficial to crop production. It is taken up through the foliage of avocado and citrus, two species which classically do not take up phosphate through their foliage. Phosphite has fungicidal properties with regard to some species of pathogenic fungi: Rhizoctonia solani, Botrytis cinerea, Piricularia oryzae, Plasmopara viticola, Phytophthora cinnamomi, and Phytophthora parasitica. Recently, it has been demonstrated that phosphite also serves as a source of metabolically active phosphorus in plants. The properties of phosphite that make it desirable as a fertilizer are 20 enhanced when it is formulated according to the present invention as a double or multiple buffer with phosphorous acid, hypophosphorous acid, polyphosphorous acid and/or polyhypophosphorous acid and their respective salts and organic acids and their salts per this invention.

Suitable organic acids have the formula R—COOH or R—COO⁻ where R is hydrogen or a carbon-containing molecule or group of molecules. Suitable organic acids are those that maintain the phosphite ion in a substantially fully solubilized form upon dilution with water at pH varying from about 6.5 to about 8.5 and that result in a use dilution fertilizer having a foliage acceptable pH for phosphorus uptake. Preferred organic acids are dicarboxylic and tricarboxylic acids.

By the term "substantially fully solubilized" it is meant that upon dilution, the phosphite does not precipitate, or at least not appreciably, so as to affect administration of the liquid product to the plant foliage, and thus is in a form available to the plant. With present phosphite fertilizers, there is a tendency for phosphite to precipitate if diluted with alkaline water, thereby rendering the phosphite in a form that is unavailable to the plant for uptake. By the term "foliageacceptable pH for phosphorus uptake", it is meant a pH that allows phosphorus to be absorbed by the plant without causing damage to the foliage. A foliage-acceptable pH for phosphorus uptake usually ranges between about 5.0 to about 7.0, and preferably between about 5.5 to about 6.5. Phosphorus is most readily taken up by foliage at pH 6.0. Depending on the plant species, a pH below 5.0 can cause damage to leaves and/or the flowers and/or fruit. At higher pH, between about 7.0 to about 7.5, there is reduced uptake of nutrients, although generally there is no plant damage. A pH between about 7.5 and 8.0, depending on the plant species, plant damage may result. A pH greater than 8.0, generally causes damage to the plant in addition to reducing uptake of the nutrients. Accordingly, suitable organic acids are those that help provide a "buffered composition" having the desired pH range. This means that a "use-dilution fertilizer" having an acidic to neutral pH (pH 5.0 to 7.0) can be achieved upon high dilutions (up to about 1/600) of the concentrated fertilizer with highly alkaline water (up to a pH of about 8.5).

Organic acids that meet [this] these criteria include but are not limited to intermediates in the Kreb's Tricarboxylic Acid Cycle, amino acids such as glutamic acid and aspartic acid, vitamin acids such as ascorbic acid and folic acid, and their respective salts. Particularly preferred organic acids are dicarboxylic and tricarboxylic acids selected from the group consisting of citrate, pyruvate, succinate, fumarate, malate, formate, oxaloacetate, citrate, cis-aconitate, isocitrate, and

α-ketoglutarate. Citrate is a particularly preferred organic acid because of it is relatively inexpensive and readily available.

These formulations allow the maintenance of continued solubility, and thus availability for uptake by plants, of phosphorus, with or without other nutrients, over a significantly wide range of concentrations and pHs. The increased solubility of these [formulation] formulations over that of phosphate or phosphite fertilizers makes it possible to prepare fertilizers with a greater concentration of phosphorus per unit volume 1 than traditional phosphate or polyphosphate fertilizers or the simple unbuffered salts of phosphorous acid recently being marketed as fertilizers for foliar application which are available as super saturated solutions with only about 16% phosphite, and which are diluted approximately 1:100 to about 15 1:300. The resulting pH of these fertilizers varies significantly depending upon the pH of the water used, thus affecting the availability of the nutrients for foliar uptake. In contrast, the highly concentrated fertilizers of the present invention, which can be diluted with water at a ratio of about 20 1:600, allow for more cost effective shipping, handling, and application. They result in greater uptake of phosphorus by the canopy of plants than traditional phosphate or recent phosphite fertilizers not formulated in this manner.

The formulations provided herein also make it possible to 25 formulate various combinations of other essential plant nutrients or other inorganic or organic compounds as desired and maintain their solubility when used over a wide range of concentrations and pHs, which is not possible for present phosphate or phosphite fertilizers. For example, boron, man- 30 ganese, calcium; iron and other elements can be provided at relatively high concentrations in these formulations. Thus, these phosphorus fertilizers also enhance the canopy uptake of other mineral nutrients essential to plants. They can be used as a canopy application to improve pre- and post-harvest crop 35 quality.

Formulations can also *be* prepared with copper. However, when high concentrations of copper are used, the copper is not fully solubilized. In this situation, the insoluble copper is desirable as it prevents rapid uptake of the copper and thus 40 minimizes the potential for copper toxicity. As the insoluble copper is rewetted [over night] overnight by dew, dissolution occurs so that additional copper is taken up. The buffering capacity of the formulation maintains the pH at a foliageacceptable pH when the insoluble copper is rewetted so that 45 conditions are optimal for uptake and are benign to the plant tissues. While copper is an element essential to plants, it is required in only small amounts. In relation to nitrogen, plants require, in general, 10,000- to 75,000-fold less copper. Provided to the foliage of the plant at the rate provided by this 50 formulation, copper is a very effective fungicide, in addition to being a plant nutrient and fertilizer.

In addition to the above-mentioned advantages, the formulations disclosed have a direct benefit to the environment. Because the formulations allow successful foliar feeding of 55 phosphorus to a number of plants that do not effectively take up phosphorus when supplied in phosphate or polyphosphate forms, and because these formulations enhance the uptake of other nutrients, they are cost-effective and can replace less efficient, traditional soil-feeding methods. This results in 60 Methods of Application reducing phosphate pollution of the groundwater and eutrophication of freshwater ponds, lakes and streams.

The phosphorus fertilizers disclosed herein can also be advantageously applied through the soil or by irrigation systems as solid (granular) or liquid formulations. These formu- 65 lations can be used at pHs sufficiently low to clean irrigation lines and alter the pH of the soil to solve alkalinity problems

while supplying essential nutrients to plants. Example 2, below discloses a suitable formulation for irrigation application. With irrigation application, the fertilizer flowing through the irrigation system will typically have a pH lower than about 2.5, usually less than about pH 1.5. The low pH is designed to supply phosphorus while killing bacteria and algae (slime) which plug irrigation lines, thus cleaning the lines. The low pH also dissolves calcium carbonate deposits at and around the emitters, and solubilizes the calcium carbonate so Ca²+ is available to the plant. Once delivered to the soil near the plant, sufficient water is applied to achieve a pH suitable for phosphorus uptake by the plant. The form in which the phosphorus is supplied in these formulations is more mobile than phosphate fertilizers or than the simple salts of phosphorous acid recently being sold as fertilizers, and thus more available and more readily taken up by the roots of plants. An advantage of these formulations is that the form in which phosphorus is supplied does not inhibit the development of mycorrhizal fungi to the same degree that traditional phosphate fertilizers do. The present compositions can also be formulated with certain nutrients in addition to phosphorus that are readily absorbed through soil applications at pH of about 5.5 to about 7.0. Such nutrients include nitrogen, calcium, magnesium, potassium, molybdenum, boron, and sulfur.

Another advantage with the phosphorus fertilizers disclosed herein is that they do not support the growth of green algae to the same degree that traditional phosphate fertilizers do. This is of significant importance to agriculture, commercial nurseries, the ornamental and cut flower industry, and the home and garden industry, as it will prevent the growth of green algae which typically proliferate and plug irrigation emitters, foul pots and benches, and provide a niche for the growth of pathogenic bacteria and fungi. These formulations also endow the phosphorus fertilizer with anti-viral, antibacterial and anti-fungal activity. This [bacterialcidal] bactericidal activity in a phosphorus fertilizer makes it possible to use this fertilizer to inhibit ice-nucleating bacteria to thus protect plants from frost damage.

Methods of Preparation

The phosphorus fertilizers are prepared by first forming solutions of the phosphorous and organic acids. Other desired nutrients can then be added with constant stirring. The amount of phosphorous relative to organic acid is not critical, as long as appropriate buffering and solubility are achieved. Generally the amount of organic acid that is added will depend upon the form in which the nutrient elements are added. For example, if calcium is to be added in the form of calcium hydroxide (a base), then the acid form of the organic acid, for example citric acid, would be used rather than its salt, citrate. In addition to the desired nutrients, other additives, that are known in the fertilizer industry, can be added. These include, for example, wetting-agents, surfactants, spreaders, stickers etc., and are described in The Farm Chemical Handbook, supra (incorporated herein by reference). The fertilizer compositions can also be prepared as solid formulations, identical to the liquid ones by simply leaving out all of the water. The properties are the same as the liquid formulations but have the additional advantage of weighing less for the same amount of nutrient.

The fertilizer is applied according to crop-specific recommendations which will depend upon the application method (foliar, soil, irrigation, etc.), time of application, rate of application, and product formulation. Crops that will benefit from the fertilizer include, but are not limited to, avocado, citrus, mango, coffee, deciduous tree crops, grapes and other berry crops, soybean and other commercial beans, corn, tomato,

cucurbits and cucumis species, lettuce, potato, sugar beets, peppers, sugarcane, hops, tobacco, pineapple, coconut palm and other commercial and ornamental palms, hevea rubber, and ornamental plants.

In addition to the foliar, soil, and irrigation application methods mentioned above, the present fertilizer may prove beneficial to certain crops through other application methods. For example, trunk paints or other methodologies may provide for a continuous low supply of fertilizers, such as, for example, "intravenous" feeding as practiced in the boron nutrition of soybeans.

In order that the invention described herein may be more fully understood, the following examples are set forth. All chemicals used were of analytical reagent quality and approximately 100% by weight unless otherwise specified. All formulations are expressed in terms of weight to volume. It should be understood that these examples are for illustrative purposes only and are not to be construed as limiting the scope of the invention in any manner.

EXAMPLE 1

A formulation was prepared of 1 gallon of 0-40-0 fertilizer with 3.86 lbs H₃PO₃, 1.34 lbs tripotassium citrate, 1.34 lbs of trisodium citrate, and 4.0 lbs of 58% ammonium hydroxide. The components were dissolved in water with constant stirring. This single formulation can be used at a rate of 2 quarts in as little as 20 gallons of water of pH 6.5 to 8.5 up to 300 gallons of water of pH 6.5 to 8.5 and maintain a pH between 5.5 to 6.5 without the formation of any precipitate.

EXAMPLE 2

A formulation was prepared of 1 gallon of 0-40-0 fertilizer with 3.86 lbs H₃PO₃ and 0.5 lbs citric acid. This formulation is stable at pH 1.0 or less and is designed for application through the irrigation system. It is stable against oxidation and precipitation when supplied through the irrigation water.

EXAMPLE 3

A formulation was prepared of 1 gallon of 0-30-0 fertilizer with 74.89% elemental boron with 2.89 lbs H₃PO₃, 28.67 lbs borax (Na₂B₄O₂.10H₂O), 17.16 lbs boric acid (H₃BO₃), 1.54 lbs H₂SO₄ and 2.67 lbs citric acid. A solution of the phosphorous and citric acid was first prepared, then the other elements were added with constant stirring. This formulation can be used at the rate of 2 quarts in as little as 20 gallons of water of pH between 6.5 to 8.5 up to 300 gallons of water of pH 6.5 to 8.5 and maintain a pH between 5.5 to 6.5 without the formation of any precipitate.

EXAMPLE 4

A formulation was prepared of 1 gallon of 0-30-0 fertilizer 55 with 21.57% [Zn] zinc and 23.22% [Mn] manganese with 2.89 lbs of H₃PO₃, 7.92 lbs ZnSO₄, 7.16 lbs Mn(H₂PO₂) ₂.H₂O, 0.61 lbs citric acid and 0.87 lbs 58% NH₄OH. This formulation can be used at the rate of two quarts in as little as 20 gallons of water of pH between 6.5 to 8.5 up to 300 gallons of water of pH between 6.5 to 8.5 and maintain a pH between 5.5 to 6.5 without the formation of any precipitate.

EXAMPLE 5

A formulation was prepared of 1 gallon of 0-30-0 fertilizer with 5.4% [Ca] *calcium*. It was packaged in a two-container

8

system where 1 gallon of solution A contained 2.89 lbs H₃PO₃, 0.68 lbs Ca(OH)₂, and 0.28 lbs citric acid, and 1 gallon of solution B contained 0.16 lbs Ca(OH)₂, 0.60 lbs KOH, 3.34 lbs 58% NH₄OH, 0.28 lbs citric acid, and 0.67 lbs EDTA (ethylenediaminetetraacetic acid). Two quarts of solution A can be added to as little as 20 gallons of water of pH between 6.5 to 8.5 up to 300 gallons of water of pH between 6.5 to 8.5 followed by the addition of two quarts of solution B. The final solution is between pH 5.5 to 6.5 and without precipitation.

[Ca] calcium can be made without requiring EDTA. This formulation is also packaged in a two-container system where 1 gallon of solution A contains 2.89 lbs H₃PO₃, 0.67 lbs Ca(OH)₂ and 0.28 lbs of citric acid, while 1 gallon of solution B contains 2.67 lbs of 58% NH₄OH, 0.6 lbs KOH. Two quarts of solution A can be added to as little as 20 gallons of water of pH between 6.5 to 8.5 up to 300 gallons of water of pH between 6.5 and 8.5 followed by the addition of two quarts of solution B. The final pH of the solution is between 5.5 and 6.5 and without precipitation.

EXAMPLE 6

A formulation was prepared of 1 gallon of 0-30-30 fertilizer with 2.89 lbs H₃PO₃, 2.99 lbs KOH, and 0.84 lbs citric acid. Two quarts can be added to as little as 20 gallons of water of pH between 6.5 to 8.5 and up to 300 gallons of water of pH between 6.5 and 8.5. The pH of the final solution is between 5.5 and 6.5 without precipitation.

EXAMPLE 7

A formulation was prepared of 1 gallon of 0-30-0 fertilizer having 4.8% iron with 2.89 H₃PO₃, 1.75 lbs iron-citrate, 0.74 lbs KOH, 0.62 lbs NaOH, and 2.00 lbs of 58% NH₄OH. Two quarts of the formulation can be added to as little as 20 gallons of water pH 6.5 to 8.5 and up to 300 gallons of water of pH 6.5 to 8.5. The pH of the final solution is between 5.5 to 6.7 without precipitation.

EXAMPLE 8

A formulation was prepared of 1 gallon of 0-30-0 fertilizer having 23.22% manganese with 2.89 H_3PO_3 , 7.16 lbs. $Mn(H_2PO_2)_2$, and 0.133 lbs. sodium citrate. Two quarts of the formulation can be added to as little as 20 gallons of water pH 6.5 to 8.5 and up to 300 gallons of water of pH 6.5 to 8.5. The pH of the final solution is between 5.5 to 6.5 without precipitation.

EXAMPLE 9

A formulation was prepared of 1 gallon of 0-30-0 fertilizer having 57% copper with 2.89 H₃PO₃, 7.3 lbs Cu(OH)₂ (57% Cu), and 1.34 lbs of 58% NH₄OH. Two quarts can be added to as little as 20 gallons of water of pH 6.5 to 8.5 up to 300 gallons of water of pH 6.5 to 8.5. The pH of the final solution is between 5.5 to 6.5. The copper is not fully soluble, however this is desirable in that it prevents the rapid uptake of copper when applied to plant foliage.

What is claimed is:

1. A concentrated phosphorus fertilizer, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution

fertilizer having a foliage acceptable pH for phosphorus uptake, and wherein said concentrated phosphorus fertilizer is buffered and analyzes to about 0.30 kg/L P₂O₅ or greater wherein said concentrated phosphorus fertilizer is prepared by a process comprising:

mixing a base and a phosphorous source,

thereby forming said concentrated phosphorus fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.

- 2. The concentrated phosphorus fertilizer according to claim 1, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.
- 3. The concentrated phosphorus fertilizer according to claim 1, wherein said about 0.30 kg/L P₂O₅ or greater is from about 0.30 kg/L P₂O₅ to about 0.40 kg/L P₂O₅.
- 4. The concentrated phosphorus fertilizer according to claim 1, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer ana- 20 acid. lyzes to about 0.30 kg/L P₂O₅ to about 0.40 kg/L P₂O₅.
- 5. The concentrated phosphorus fertilizer according to claim 2, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.
- 6. The concentrated phosphorus fertilizer according to claim 1, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.
- 7. The concentrated phosphorus fertilizer according to 30 claim 6, wherein said concentrated phosphorus fertilizer has a pH of about 5.5 to about 6.5.
- 8. The concentrated phosphorus fertilizer according to claim 1, wherein said concentrated phosphorus fertilizer is essentially clear and devoid of precipitate.
- 9. The concentrated phosphorus fertilizer according to claim 1, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combina- 40 tions thereof.
- 10. The concentrated phosphorus fertilizer according to claim 1, wherein said phosphorous source is a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅⁻, H₂P₂O₅²⁻, HPO₃²⁻, H₂PO₃⁻, H₂PO₂⁻ and combinations thereof.
- 11. The concentrated phosphorus fertilizer according to claim 1, further comprising an organic acid.
- 12. The concentrated phosphorus fertilizer according to claim 11, wherein said organic acid is a member selected from 50 the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 13. The concentrated phosphorus fertilizer according to claim 11, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, 55 formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
- 14. The concentrated phosphorus fertilizer according to claim 11, wherein said organic acid is citric acid.
- 15. The concentrated phosphorus fertilizer according to 60 claim 4, further comprising an organic acid.
- 16. The concentrated phosphorus fertilizer according to claim 15, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 17. The concentrated phosphorus fertilizer according to claim 15, wherein said organic acid is a member selected from

10

the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.

- 18. The concentrated phosphorus fertilizer according to claim 15, wherein said organic acid is citric acid.
- 19. The concentrated phosphorus fertilizer according to claim 1, wherein said [mixing further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.
 - 20. The concentrated phosphorus fertilizer according to claim 19, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
 - 21. The concentrated phosphorus fertilizer according to claim 19, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
 - 22. The concentrated phosphorus fertilizer according to claim 19, wherein said organic acid is citric acid.
 - 23. The concentrated phosphorus fertilizer according to claim 4, wherein said [mixing further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.
 - 24. The concentrated phosphorus fertilizer according to claim 23, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 25. The concentrated phosphorus fertilizer according to claim 23, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-ketoglutaric acid.
 - 26. The concentrated phosphorus fertilizer according to claim 23, wherein said organic acid is citric acid.
 - 27. A concentrated phosphorus fertilizer comprising a multiply buffered composition, such that when said [multiply buffered composition] concentrated phosphorous fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake and wherein said concentrated phosphorus fertilizer is buffered and analyzes to about 0.30 kg/L P_2O_5 or greater

wherein said concentrated phosphorus fertilizer is prepared by a process comprising:

mixing a first buffer system and a second buffer system, wherein said first buffer system comprises a phosphorous source and wherein said second buffer system comprises a member selected from the group consisting of an organic acid, a salt of an organic acid and combinations thereof,

thereby forming said concentrated phosphorus fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.

- 28. The concentrated phosphorus fertilizer according to claim 27, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-containing acid, salt of a phosphorous-containing acid and combinations thereof.
- **29**. The concentrated phosphorus fertilizer according to claim **27**, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .

- 30. The concentrated phosphorus fertilizer according to claim 27, wherein the quantity of said phosphorus source is sufficient so that said concentrated phosphorus fertilizer analyzes to about $0.30 \text{ kg/L P}_2\text{O}_5$ to about $0.40 \text{ kg/L P}_2\text{O}_5$.
- 31. The concentrated phosphorus fertilizer according to claim 28, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.
- 32. The concentrated phosphorus fertilizer according to claim 27, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.
- 33. The concentrated phosphorus fertilizer according to claim 24, wherein said concentrated phosphorus fertilizer has a pH of about 5.5 to about 6.5.
- 34. The concentrated phosphorus fertilizer according to claim 27, wherein said concentrated phosphorus fertilizer is essentially clear and devoid of precipitate.
- 35. The concentrated phosphorus fertilizer according to claim 27, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.
- **36**. The concentrated phosphorus fertilizer according to claim **27**, wherein said phosphorous source is a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅⁻, H₂P₂O₅²⁻, HPO₃²⁻, H₂PO₃⁻, H₂PO₂⁻ and combinations thereof.
- 37. The concentrated phosphorus fertilizer according to claim 27, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 38. The concentrated phosphorus fertilizer according to 35 claim 27, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
- 39. The concentrated phosphorus fertilizer according to 40 claim 27, wherein said organic acid is citric acid.
- 40. The concentrated phosphorus fertilizer according to claim 30, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 41. The concentrated phosphorus fertilizer according to claim 30, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
- 42. The concentrated phosphorus fertilizer according to claim 30, wherein said organic acid is citric acid.
- **43**. A concentrated phosphorus fertilizer comprising a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅, H₂P₂O₅, H
 - wherein said concentrated phosphorus fertilizer is prepared by a process comprising:
 - mixing a base and a phosphorous source, wherein said phosphorous source is a member selected from the

12

group consisting of H_3PO_3 , $H_4P_2O_5$, $H_3P_2O_5^-$, $H_2P_2O_5^{2-}$, $H_2PO_3^{2-}$, $H_2PO_3^{2-}$, $H_2PO_3^{2-}$, $H_2PO_3^{2-}$ and combinations thereof,

thereby forming said concentrated phosphorus fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.

- 44. The concentrated phosphorus fertilizer according to claim 43, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- **45**. The concentrated phosphorus fertilizer according to claim **43**, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer analyzes to about $0.30 \text{ kg/L P}_2\text{O}_5$ to about $0.40 \text{ kg/L P}_2\text{O}_5$.
- 46. The concentrated phosphorus fertilizer according to claim 43, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.
- 47. The concentrated phosphorus fertilizer according to claim 43, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.
- **48**. The concentrated phosphorus fertilizer according to claim **47**, wherein said concentrated phosphorus fertilizer has a pH of about 5.5 to about 6.5.
- 49. The concentrated phosphorus fertilizer according to claim 43, wherein said concentrated phosphorus fertilizer is essentially clear and devoid of precipitate.
- 50. The concentrated phosphorus fertilizer according to claim 43, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.
- 51. The concentrated phosphorus fertilizer according to claim 43, further comprising an organic acid.
- **52**. The concentrated phosphorus fertilizer according to claim **[43]** *51*, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 53. The concentrated phosphorus fertilizer according to claim [43] 51, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
 - **54**. The concentrated phosphorus fertilizer according to claim **[43]** *51*, wherein said organic acid is citric acid.
 - 55. The concentrated phosphorus fertilizer according to claim 45, further comprising an organic acid.
 - **56**. The concentrated phosphorus fertilizer according to claim **[45]** *55*, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
 - 57. The concentrated phosphorus fertilizer according to claim [45] 55, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
 - **58**. The concentrated phosphorus fertilizer according to claim [45] 55, wherein said organic acid is citric acid.
- 59. The concentrated phosphorus fertilizer according to claim 43, wherein said [mixing further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.

- 60. The concentrated phosphorus fertilizer according to claim 59, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 61. The concentrated phosphorus fertilizer according to claim 59, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
- **62**. The concentrated phosphorus fertilizer according to 10 claim **59**, wherein said organic acid is citric acid.
- 63. The concentrated phosphorus fertilizer according to claim 45, wherein said [mixing further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous 15 source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.
- **64**. The concentrated phosphorus fertilizer according to claim **63**, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic 20 acid.
- 65. The concentrated phosphorus fertilizer according to claim 63, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric 25 acid.
- 66. The concentrated phosphorus fertilizer according to claim 63, wherein said organic acid is citric acid.
- 67. A concentrated phosphite-containing fertilizer comprising a phosphorous source, such that when said concentrated phosphite-containing fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part concentrated phosphite-containing fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake and wherein said concentrated phosphite-containing fertilizer is buffered and analyzes to about 0.30 kg/L P₂O₅ or greater
 - wherein said concentrated phosphite-containing fertilizer is prepared by a process comprising:

mixing a base and a phosphorous source,

- thereby forming said concentrated phosphite-containing fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.
- 68. The concentrated phosphite-containing fertilizer 45 according to claim 67, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.
- **69**. The concentrated phosphite-containing fertilizer 50 according to claim **67**, wherein said about $0.30 \text{ kg/L P}_2\text{O}_5$ or greater is from about $0.30 \text{ kg/L P}_2\text{O}_5$.
- 70. The concentrated phosphite-containing fertilizer according to claim 67, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphite-containing fertilizer analyzes to about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- 71. The concentrated phosphite-containing fertilizer according to claim 67, wherein said concentrated phosphite-containing fertilizer has a pH of about 5.0 to about 7.0.
- 72. The concentrated phosphite-containing fertilizer according to claim 71, wherein said concentrated phosphite-containing fertilizer has a pH of about 5.5 to about 6.5.
- 73. The concentrated phosphite-containing fertilizer according to claim 67, wherein said concentrated phosphite-65 containing fertilizer is essentially clear and devoid of precipitate.

14

- 74. The concentrated phosphite-containing fertilizer according to claim 67, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.
- 75. The concentrated phosphite-containing fertilizer according to claim 67, wherein said phosphorous source is a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂PO₃, H₂
- 76. The concentrated phosphorus fertilizer according to claim 67, further comprising an organic acid.
- 77. The concentrated phosphorus fertilizer according to claim 76, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 78. The concentrated phosphorus fertilizer according to claim 76, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
- 79. The concentrated phosphorus fertilizer according to claim 76, wherein said organic acid is citric acid.
- 80. The concentrated phosphorus fertilizer according to claim 70, further comprising an organic acid.
- 81. The concentrated phosphorus fertilizer according to claim 80, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 82. The concentrated phosphorus fertilizer according to claim 80, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
- 83. The concentrated phosphorus fertilizer according to claim 80, wherein said organic acid is citric acid.
- 84. The concentrated phosphorus fertilizer according to claim 67, wherein said [mixing further comprises an organic acid] concentrated phosphite-containing fertilizer is prepared by a process comprising: mixing said base, said phosphorous source and an organic acid, thereby forming said concentrated phosphite-containing fertilizer.
 - 85. The concentrated phosphorus fertilizer according to claim 84, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
 - 86. The concentrated phosphorus fertilizer according to claim 84, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.
 - 87. The concentrated phosphorus fertilizer according to claim 84, wherein said organic acid is citric acid.
- 88. The concentrated phosphorus fertilizer according to claim 70, wherein said [mixing further comprises an organic acid] concentrated phosphite-containing fertilizer is prepared by a process comprising: mixing said base, said phosphorous source and an organic acid, thereby forming said concentrated phosphite-containing fertilizer.
 - 89. The concentrated phosphorus fertilizer according to claim 88, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
 - 90. The concentrated phosphorus fertilizer according to claim 88, wherein said organic acid is a member selected from

the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -ketoglutaric acid.

- 91. The concentrated phosphorus fertilizer according to claim 88, wherein said organic acid is citric acid.
- 92. A concentrated phosphorus fertilizer comprising a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂P₀O₅, H₂

wherein said concentrated phosphorus fertilizer is prepared by a process comprising:

dissolving a salt of a phosphorous-containing acid in 20 water,

thereby forming said concentrated phosphorus fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.

- 93. The concentrated phosphorus fertilizer according to claim 92, wherein said about 0.30 kg/L P_2O_5 or greater is 25 from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- 94. The concentrated phosphorus fertilizer according to claim 92, wherein the quantity of said member is sufficient so that said concentrated phosphorus fertilizer analyzes to about $0.30 \text{ kg/L P}_2\text{O}_5$ to about $0.40 \text{ kg/L P}_2\text{O}_5$.
- 95. The concentrated phosphorus fertilizer according to claim 92, wherein the phosphorous-containing acid in said salt of a phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.
- 96. The concentrated phosphorus fertilizer according to claim 92, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.
- 97. The concentrated phosphorus fertilizer according to claim 96, wherein said concentrated phosphorus fertilizer has a pH of about 5.5 to about 6.5.
- 98. The concentrated phosphorus fertilizer according to claim 92, wherein said concentrated phosphorus fertilizer is 45 essentially clear and devoid of precipitate.
- 99. The concentrated phosphorus fertilizer according to claim 92, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of m nitrogen, potassium, sulfur, calcium, magnesium, boron, 50 iron, manganese, molybdenum, zinc, ammonia and combinations thereof.
- 100. The concentrated phosphorus fertilizer according to claim 92, further comprising an organic acid.
- 101. The concentrated phosphorus fertilizer according to 55 claim 100, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 102. The concentrated phosphorus fertilizer according to claim 100, wherein said organic acid is a member selected 60 from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 103. The concentrated phosphorus fertilizer according to claim 100, wherein said organic acid is citric acid.
- 104. The concentrated phosphorus fertilizer according to claim 93, further comprising an organic acid.

16

- 105. The concentrated phosphorus fertilizer according to claim 104, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 106. The concentrated phosphorus fertilizer according to claim 104, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 107. The concentrated phosphorus fertilizer according to claim 104, wherein said organic acid is citric acid.
- 108. The concentrated phosphorus fertilizer according to claim 94, further comprising an organic acid.
- 109. The concentrated phosphorus fertilizer according to claim 108, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 110. The concentrated phosphorus fertilizer according to claim 108, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 111. The concentrated phosphorus fertilizer according to claim 108, wherein said organic acid is citric acid.
- 112. The concentrated phosphorus fertilizer according to claim 92, wherein said [dissolving further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said salt of said phosphorus-containing acid in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.
- 113. The concentrated phosphorus fertilizer according to claim 112, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 114. The concentrated phosphorus fertilizer according to claim 112, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
 - 115. The concentrated phosphorus fertilizer according to claim 112, wherein said organic acid is citric acid.
 - 116. The concentrated phosphorus fertilizer according to claim 93, wherein said [dissolving further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said salt of said phosphorus-containing acid in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.
 - 117. The concentrated phosphorus fertilizer according to claim 116, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
 - 118. The concentrated phosphorus fertilizer according to claim 116, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
 - 119. The concentrated phosphorus fertilizer according to claim 116, wherein said organic acid is citric acid.
- 120. The concentrated phosphorus fertilizer according to claim 94, wherein said [dissolving further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said salt of said phosphorus-containing acid in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.

- 121. The concentrated phosphorus fertilizer according to claim 120, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 122. The concentrated phosphorus fertilizer according to claim 120, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 123. The concentrated phosphorus fertilizer according to 10 claim 120, wherein said organic acid is citric acid.
- 124. A concentrated phosphorus fertilizer, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, 15 there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, and wherein said concentrated phosphorus fertilizer is buffered and analyzes to about 0.30 kg/L P₂O₅ or greater

wherein said concentrated phosphorus fertilizer is pre- 20 pared by a process comprising:

dissolving a phosphorous source in water,

thereby forming said concentrated phosphorus fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.

- 125. The concentrated phosphorus fertilizer according to claim 124, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.
- 126. The concentrated phosphorus fertilizer according to 30 claim 124, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- 127. The concentrated phosphorus fertilizer according to claim 124, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer ana- 35 lyzes to about $0.30~{\rm kg/L}~P_2O_5$ to about $0.40~{\rm kg/L}~P_2O_5$.
- 128. The concentrated phosphorus fertilizer according to claim 125, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.
- 129. The concentrated phosphorus fertilizer according to claim 124, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.
- 130. The concentrated phosphorus fertilizer according to 45 claim 129, wherein said concentrated phosphorus fertilizer has a pH of about 5.5 to about 6.5.
- 131. The concentrated phosphorus fertilizer according to claim 124, wherein said concentrated phosphorus fertilizer is essentially clear and devoid of precipitate.
- 132. The concentrated phosphorus fertilizer according to claim 124, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.
- 133. The concentrated phosphorus fertilizer according to claim 124, wherein said phosphorous source is a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₂PO₂²⁻, HPO₃²⁻, H₂PO₃⁻, H₂PO₂⁻ and combinations thereof.

 151. The concentrated phosphorus fertilizer according to claim 150, we selected from the group consisting of H₃PO₃, H₄P₂O₅, from the group consisting of H₃PO₃, H₄PO₂ and combinations thereof.
- 134. The concentrated phosphorus fertilizer according to claim 124, further comprising an organic acid.
- 135. The concentrated phosphorus fertilizer according to claim 134, wherein said organic acid is a member selected 65 from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

18

- 136. The concentrated phosphorus fertilizer according to claim 134, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 137. The concentrated phosphorus fertilizer according to claim 134, wherein said organic acid is citric acid.
- 138. The concentrated phosphorus fertilizer according to claim 126, further comprising an organic acid.
- 139. The concentrated phosphorus fertilizer according to claim 138, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 140. The concentrated phosphorus fertilizer according to claim 138, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 141. The concentrated phosphorus fertilizer according to claim 138, wherein said organic acid is citric acid.
- 142. The concentrated phosphorus fertilizer according to claim 127, further comprising an organic acid.
- 143. The concentrated phosphorus fertilizer according to claim 142, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 144. The concentrated phosphorus fertilizer according to claim 142, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 145. The concentrated phosphorus fertilizer according to claim 142, wherein said organic acid is citric acid.
- 146. The concentrated phosphorus fertilizer according to claim 124, wherein said [dissolving further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said phosphorous source in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.
- 147. The concentrated phosphorus fertilizer according to claim 146, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 148. The concentrated phosphorus fertilizer according to claim 146, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
- 149. The concentrated phosphorus fertilizer according to claim 146, wherein said organic acid is citric acid.
 - 150. The concentrated phosphorus fertilizer according to claim 126, wherein said [dissolving further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said phosphorous source in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.
 - 151. The concentrated phosphorus fertilizer according to claim 150, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
 - 152. The concentrated phosphorus fertilizer according to claim 150, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.
 - 153. The concentrated phosphorus fertilizer according to claim 150, wherein said organic acid is citric acid.

154. The concentrated phosphorus fertilizer according to claim 127, wherein said [dissolving further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said phosphorous source in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.

155. The concentrated phosphorus fertilizer according to claim 154, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

156. The concentrated phosphorus fertilizer according to claim 154, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.

157. The concentrated phosphorus fertilizer according to claim 154, wherein said organic acid is citric acid.

158. A concentrated phosphorus fertilizer for irrigation application, wherein said concentrated phosphorus fertilizer 20 is buffered, has a pH of less than about 2.5, analyzes to about 0.30 kg/L P₂O₅ or greater, and is prepared by a process comprising:

mixing a base and a phosphorous source,

thereby forming said concentrated phosphorus fertilizer which analyzes to about 0.30 kg/L P₂O₅ or greater.

159. The concentrated phosphorus fertilizer according to claim 158, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.

160. The concentrated phosphorus fertilizer according to claim 158, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .

161. The concentrated phosphorus fertilizer according to claim 158, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer analyzes to about $0.30 \text{ kg/L P}_2\text{O}_5$ to about $0.40 \text{ kg/L P}_2\text{O}_5$.

162. The concentrated phosphorus fertilizer according to claim 159, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.

163. The concentrated phosphorus fertilizer according to 45 claim 158, wherein said pH is less than about 1.5.

164. The concentrated phosphorus fertilizer according to claim 158, further comprising an organic acid.

165. The concentrated phosphorus fertilizer according to claim 164, wherein said organic acid is a member selected 50 from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

166. The concentrated phosphorus fertilizer according to claim 164, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, 55 malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.

167. The concentrated phosphorus fertilizer according to claim 164, wherein said organic acid is citric acid.

168. The concentrated phosphorus fertilizer according to 60 claim 161, further comprising an organic acid.

169. The concentrated phosphorus fertilizer according to claim 168, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

170. The concentrated phosphorus fertilizer according to claim 169, wherein said organic acid is a member selected

20

from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.

171. The concentrated phosphorus fertilizer according to claim 170, wherein said organic acid is citric acid.

172. The concentrated phosphorus fertilizer according to claim 158, wherein said [mixing further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorus source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.

173. The concentrated phosphorus fertilizer according to claim 172, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

174. The concentrated phosphorus fertilizer according to claim 172, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α -keto-glutaric acid.

175. The concentrated phosphorus fertilizer according to claim 172, wherein said organic acid is citric acid.

176. The concentrated phosphorus fertilizer according to claim 161, wherein said [mixing further comprises an organic acid] concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.

177. The concentrated phosphorus fertilizer according to claim 176, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

178. The concentrated phosphorus fertilizer according to claim 176, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.

179. The concentrated phosphorus fertilizer according to claim 176, wherein said organic acid is citric acid.

180. A concentrated phosphorus fertilizer, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, and wherein said concentrated phosphorus fertilizer is buffered

wherein said concentrated phosphorus fertilizer is prepared by a process comprising:

mixing a base and a phosphorous source and an organic acid source,

wherein said organic acid source is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, a salt thereof and combinations thereof;

thereby forming said concentrated phosphorus fertilizer.

181. The concentrated phosphorus fertilizer of claim 180, wherein said organic acid source is a member selected from the group consisting of pyruvic acid succinic acid.

the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, cis-aconitic acid, citric acid, isocitric acid, α -ketoglutaric acid, a salt thereof, and combinations thereof.

182. The concentrated phosphorus fertilizer of claim 181, wherein said organic acid source is a member selected from the group consisting of citric acid, a citric acid salt, and combinations thereof.

183. A concentrated phosphorus fertilizer comprising a multiply buffered composition, such that when said [multiply buffered composition] concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 5 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake and wherein said concentrated phosphorus fertilizer is buffered

wherein said concentrated phosphorus fertilizer is pre- 10 pared by a process comprising:

mixing a first buffer system and a second buffer system, wherein said first buffer system comprises a phosphorous source and wherein said second buffer system comprises a member selected from the group consisting of an organic acid, a salt of an organic acid and combinations thereof,

wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, and combinations thereof;

thereby forming said concentrated phosphorus fertilizer.

184. The concentrated phosphorus fertilizer of claim 183, wherein said organic acid is a member selected from the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, cisaco- 25 nitic acid, citric acid, isocitric acid, α-ketoglutaric acid and combinations thereof.

185. The concentrated phosphorus fertilizer of claim 184, wherein said organic acid is citric acid.

186. A concentrated phosphorus fertilizer comprising a 30 member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂P₀O₅, H₂P₀O₅,

wherein said concentrated phosphorus fertilizer is pre- 40 pared by a process comprising:

mixing a base and a phosphorous source and an organic acid source, wherein said phosphorous source is a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅, H₂P₂O₅, H₂P₂O₅, HPO₃, H₂PO₃, 45 H₂PO₂ and combinations thereof, and

wherein said organic acid source is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, a salt thereof and combinations thereof;

thereby forming said concentrated phosphorus fertilizer.

187. The concentrated phosphorus fertilizer of claim 186, wherein said organic acid source is a member selected from the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, 55 cis-aconitic acid, citric acid, isocitric acid, α-ketoglutaric acid, a salt thereof, and combinations thereof.

188. The concentrated phosphorus fertilizer of claim 187, wherein said organic acid source is a member selected from the group consisting of citric acid, a citric acid salt, and 60 combinations thereof.

189. A concentrated phosphite-containing fertilizer comprising a phosphorous source, such that when said concentrated phosphite-containing fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part 65 concentrated phosphite-containing fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-

22

dilution fertilizer having a foliage acceptable pH for phosphorus uptake and wherein said concentrated phosphite-containing fertilizer is buffered

wherein said concentrated phosphite-containing fertilizer is prepared by a process comprising:

mixing a base and a phosphorous source and an organic acid source

wherein said organic acid source is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, a salt thereof and combinations thereof;

thereby forming said concentrated phosphite-containing fertilizer.

190. The concentrated phosphorus fertilizer of claim 189, wherein said organic acid source is a member selected from the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, cis-aconitic acid, citric acid, isocitric acid, α-ketoglutaric acid, a salt thereof, and combinations thereof.

191. The concentrated phosphorus fertilizer of claim 190, wherein said organic acid source is a member selected from the group consisting of citric acid, a citric acid salt, and combinations thereof.

192. A concentrated phosphorus fertilizer comprising a member selected from the group consisting of H₃PO₃, H₄P₂O₅, H₃P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂P₂O₅, H₂PO₃, H₂PO₂ and combinations thereof, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, and wherein said concentrated phosphorus fertilizer is buffered

wherein said concentrated phosphorus fertilizer is prepared by a process comprising:

dissolving an organic acid source and a salt of a phosphorous-containing acid in water,

wherein said organic acid source is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, a salt thereof and combinations thereof;

thereby forming said concentrated phosphorus fertilizer. 193. The concentrated phosphorus fertilizer of claim 192, wherein said organic acid source is a member selected from the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, cis-aconitic acid, citric acid, isocitric acid, α-ketoglutaric acid, a salt thereof, and combinations thereof.

194. The concentrated phosphorus fertilizer of claim 193, wherein said organic acid source is a member selected from the group consisting of citric acid, a citric acid salt, and combinations thereof.

195. A concentrated phosphorus fertilizer, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, and wherein said concentrated phosphorus fertilizer is buffered

wherein said concentrated phosphorus fertilizer is prepared by a process comprising:

dissolving an organic acid source and a phosphorous source in water,

wherein said organic acid source is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, a salt thereof and combinations thereof;

thereby forming said concentrated phosphorus fertilizer. 5 **196**. The concentrated phosphorus fertilizer of claim **195**, wherein said organic acid source is a member selected from the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, cis-aconitic acid, citric acid, isocitric acid, α-ketoglutaric acid, a salt thereof, and combinations thereof.

197. The concentrated phosphorus fertilizer of claim 196, wherein said organic acid source is a member selected from the group consisting of citric acid, a citric acid salt, and combinations thereof.

198. A concentrated phosphorus fertilizer for irrigation application, wherein said concentrated phosphorus fertilizer is buffered, has a pH of less than about 2.5, and is prepared by a process comprising:

mixing a base and a phosphorous source and an organic 20 acid source,

wherein said organic acid source is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, a salt thereof and combinations thereof;

thereby forming said concentrated phosphorus fertilizer.

199. The concentrated phosphorus fertilizer of claim 198, wherein said organic acid source is a member selected from the group consisting of pyruvic acid, succinic acid, fumaric acid, malic acid, formic acid, oxaloacetic acid, cis-aconitic acid, citric acid, isocitric acid, α-ketoglu- 30 taric acid, a salt thereof, and combinations thereof.

200. The concentrated phosphorus fertilizer of claim 199, wherein said organic acid source is a member selected from the group consisting of citric acid, a citric acid salt, and combinations thereof.

201. A concentrated phosphorus fertilizer, wherein said phosphorus analyzes to about $0.30\,\mathrm{kg/L}\,P_2O_5$ or greater, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, and wherein said concentrated phosphorus fertilizer is buffered and is prepared by a process comprising:

mixing a base and a phosphorous source,

thereby forming said concentrated phosphorus fertilizer.

202. The concentrated phosphorus fertilizer according to claim 201, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-contain- 50 ing acid, a salt of a phosphorous-containing acid, and combinations thereof.

203. The concentrated phosphorus fertilizer according to claim 201, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .

204. The concentrated phosphorus fertilizer according to claim 201, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer analyzes to about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .

205. The concentrated phosphorus fertilizer according to 60 claim 202, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polphosphorous acid, polyhypophosphorous acid and combinations thereof.

206. The concentrated phosphorus fertilizer according to 65 claim 201, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.

24

207. The concentrated phosphorus fertilizer according to claim 206, wherein said concentrated phosphorus fertilizer has a pH of about 5.5 to about 6.5.

208. The concentrated phosphorus fertilizer according to claim 201, wherein said concentrated phosphorus fertilizer is essentially clear and devoid of precipitate.

209. The concentrated phosphorus fertilizer according to claim 201, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.

210. The concentrated phosphorus fertilizer according to claim 201, wherein said phosphorous source is a member selected from the group consisting of H_3PO_3 , $H_4P_2O_5$, $H_3P_2O_5^-$, $H_2P_2O_5^{2-}$, HPO_3^{2-} , $H_2PO_3^-$, $H_2PO_2^-$ and combinations thereof.

211. The concentrated phosphorus fertilizer according to claim 201, further comprising an organic acid.

212. The concentrated phosphorus fertilizer according to claim 211, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

213. The concentrated phosphorus fertilizer according to claim 211, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.

214. The concentrated phosphorus fertilizer according to claim 211, wherein said organic acid is citric acid.

215. The concentrated phosphorus fertilizer according to claim 204, further comprising an organic acid.

216. The concentrated phosphorus fertilizer according to claim 215, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

217. The concentrated phosphorus fertilizer according to claim 215, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.

218. The concentrated phosphorus fertilizer according to claim 215, wherein said organic acid is citric acid.

219. The concentrated phosphorus fertilizer according to claim 201, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.

220. The concentrated phosphorus fertilizer according to claim 219, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

221. The concentrated phosphorus fertilizer according to claim 219, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.

222. The concentrated phosphorus fertilizer according to claim 219, wherein said organic acid is citric acid.

223. The concentrated phosphorus fertilizer according to claim 204, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.

- 224. The concentrated phosphorus fertilizer according to claim 223, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 225. The concentrated phosphorus fertilizer according to ⁵ claim 223, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
- 226. The concentrated phosphorus fertilizer according to claim 223, wherein said organic acid is citric acid.
- 227. A concentrated phosphite-containing fertilizer comprising a phosphorous source, such that when said concentrated phosphite-containing fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part concentrated phosphite-containing fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, wherein said concentrated phosphite- 20 containing fertilizer is buffered and wherein said phosphorus analyzes to about 0.30 kg/L P_2O_5 or greater,

wherein said concentrated phosphite-containing fertilizer is prepared by a process comprising:

mixing a base and a phosphorous source,

thereby forming said concentrated phosphite-containing fertilizer.

- 228. The concentrated phosphite-containing fertilizer according to claim 227, wherein said phosphorous source is a member selected from the group consisting of a phospho- 30 rous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.
- 229. The concentrated phosphite-containing fertilizer according to claim 227, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 . 35
- 230. The concentrated phosphite-containing fertilizer according to claim 227, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphite-containing fertilizer analyzes to about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- 231. The concentrated phosphite-containing fertilizer according to claim 227, wherein said concentrated phosphite-containing fertilizer has a pH of about 5.0 to about 7.0.
- 232. The concentrated phosphite-containing fertilizer according to claim 231, wherein said concentrated phos- 45 phite-containing fertilizer has a pH of about 5.5 to about 6.5.
- 233. The concentrated phosphite-containing fertilizer according to claim 227, wherein said concentrated phosphite-containing fertilizer is essentially clear and devoid of precipitate.
- 234. The concentrated phosphite-containing fertilizer according to claim 227, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, 55 ammonia and combinations thereof.
- 235. The concentrated phosphite-containing fertilizer according to claim 227, wherein said phosphorous source is a member selected from the group consisting of H_3PO_3 , $H_4P_2O_5$, $H_3P_2O_5^-$, $H_2P_2O_5^{2-}$, HPO_3^{2-} , $H_2PO_3^-$, $H^2PO_2^-$ 60 and combinations thereof.
- 236. The concentrated phosphorus fertilizer according to claim 227, further comprising an organic acid.
- 237. The concentrated phosphorus fertilizer according to claim 236, wherein said organic acid is a member selected 65 from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

26

- 238. The concentrated phosphorus fertilizer according to claim 236, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.
- 239. The concentrated phosphorus fertilizer according to claim 236, wherein said organic acid is citric acid.
- 240. The concentrated phosphorus fertilizer according to claim 230, further comprising an organic acid.
- 241. The concentrated phosphorus fertilizer according to claim 240, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 242. The concentrated phosphorus fertilizer according to claim 240, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
- 243. The concentrated phosphorus fertilizer according to claim 240, wherein said organic acid is citric acid.
- 244. The concentrated phosphorus fertilizer according to claim 227, wherein said concentrated phosphite-containing fertilizer is prepared by a process comprising mixing said base, said phosphorous source and an organic acid, thereby forming said concentrated phosphite-containing fertilizer.
- 245. The concentrated phosphorus fertilizer according to claim 244, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 246. The concentrated phosphorus fertilizer according to claim 244, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
- 247. The concentrated phosphorus fertilizer according to claim 244, wherein said organic acid is citric acid.
- 248. The concentrated phosphorus fertilizer according to claim 230, wherein said concentrated phosphite-containing fertilizer is prepared by a process comprising: mixing said base, said phosphorous source and an organic acid, thereby forming said concentrated phosphite-containing fertilizer.
 - 249. The concentrated phosphorus fertilizer according to claim 248, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 250. The concentrated phosphorus fertilizer according to claim 248, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
 - 251. The concentrated phosphorus fertilizer according to claim 248, wherein said organic acid is citric acid.
 - 252. A concentrated phosphorus fertilizer, wherein said phosphorus analyzes to about 0.30 kg/L P₂O₅ or greater, such that when said concentrated phosphorus fertilizer is diluted with water having a pH as low as about 6.5 at a ratio of about 1 part said concentrated phosphorus fertilizer to about 40 parts water, there is formed a substantially fully solubilized use-dilution fertilizer having a foliage acceptable pH for phosphorus uptake, wherein said concentrated phosphorus fertilizer is buffered and is prepared by a process comprising: dissolving a phosphorous source in water,

thereby forming said concentrated phosphorus fertilizer.

253. The concentrated phosphorus fertilizer according to claim 252, wherein said phosphorous source is a member

selected from the group consisting of a phosphorous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.

254. The concentrated phosphorus fertilizer according to claim 252, wherein said about 0.30 kg/L P_2O_5 or greater is 5 from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .

255. The concentrated phosphorus fertilizer according to claim 252, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer analyzes to about $0.30 \text{ kg/L } P_2O_5$ to about $0.40 \text{ kg/L } P_2O_5$.

256. The concentrated phosphorus fertilizer according to claim 253, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyhypophosphorous acid and combinations thereof.

257. The concentrated phosphorus fertilizer according to claim 252, wherein said concentrated phosphorus fertilizer has a pH of about 5.0 to about 7.0.

258. The concentrated phosphorus fertilizer according to claim 257, wherein said concentrated phosphorus fertilizer 20 has a pH of about 5.5 to about 6.5.

259. The concentrated phosphorus fertilizer according to claim 252, wherein said concentrated phosphorus fertilizer is essentially clear and devoid of precipitate.

260. The concentrated phosphorus fertilizer according to claim 252, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.

261. The concentrated phosphorus fertilizer according to claim 252, wherein said phosphorous source is a member selected from the group consisting of H_3PO_3 , $H_4P_2O_5$, $H_3P_2O_5^-$, $H_2P_2O_5^{2-}$, HPO_3^{2-} , $H_2PO_3^-$, $H_2PO_2^-$ and combinations thereof.

262. The concentrated phosphorus fertilizer according to claim 252, further comprising an organic acid.

263. The concentrated phosphorus fertilizer according to claim 262, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricar-40 boxylic acid.

264. The concentrated phosphorus fertilizer according to claim 262, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-45 glutaric acid.

265. The concentrated phosphorus fertilizer according to claim 262, wherein said organic acid is citric acid.

266. The concentrated phosphorus fertilizer according to claim 254, further comprising an organic acid.

267. The concentrated phosphorus fertilizer according to claim 266, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

268. The concentrated phosphorus fertilizer according to claim 266, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.

269. The concentrated phosphorus fertilizer according to 60 claim 266, wherein said organic acid is citric acid.

270. The concentrated phosphorus fertilizer according to claim 255, further comprising an organic acid.

271. The concentrated phosphorus fertilizer according to claim 270, wherein said organic acid is a member selected 65 from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

28

272. The concentrated phosphorus fertilizer according to claim 270, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.

273. The concentrated phosphorus fertilizer according to claim 270, wherein said organic acid is citric acid.

274. The concentrated phosphorus fertilizer according to claim 252, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said phosphorus source in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.

275. The concentrated phosphorus fertilizer according to claim 274, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

276. The concentrated phosphorus fertilizer according to claim 274, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.

277. The concentrated phosphorus fertilizer according to claim 274, wherein said organic acid is citric acid.

278. The concentrated phosphorus fertilizer according to claim 254, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said phosphorus source in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.

279. The concentrated phosphorus fertilizer according to claim 278, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

280. The concentrated phosphorus fertilizer according to claim 278, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.

281. The concentrated phosphorus fertilizer according to claim 278, wherein said organic acid is citric acid.

282. The concentrated phosphorus fertilizer according to claim 255, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: dissolving said phosphorous source in water with an organic acid, thereby forming said concentrated phosphorus fertilizer.

283. The concentrated phosphorus fertilizer according to claim 282, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.

284. The concentrated phosphorus fertilizer according to claim 282, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.

285. The concentrated phosphorus fertilizer according to claim 282, wherein said organic acid is citric acid.

286. A concentrated phosphorus fertilizer for irrigation application, wherein said phosphorus analyzes to about 0.30 $kg/L P_2O_5$ or greater and wherein said concentrated phosphorus fertilizer is buffered, has a pH of less than about 2.5, and is prepared by a process comprising:

mixing a base and a phosphorous source,

thereby forming said concentrated phosphorus fertilizer.

287. The concentrated phosphorus fertilizer according to claim 286, wherein said phosphorous source is a member selected from the group consisting of a phosphorous-containing acid, a salt of a phosphorous-containing acid, and combinations thereof.

- 288. The concentrated phosphorus fertilizer according to claim 286, wherein said about 0.30 kg/L P_2O_5 or greater is from about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- 289. The concentrated phosphorus fertilizer according to claim 286, wherein the quantity of said phosphorous source is sufficient so that said concentrated phosphorus fertilizer analyzes to about 0.30 kg/L P_2O_5 to about 0.40 kg/L P_2O_5 .
- 290. The concentrated phosphorus fertilizer according to claim 287, wherein said phosphorous-containing acid is a member selected from the group consisting of phosphorous acid, hypophosphorous acid, polyphosphorous acid, polyphosphorous acid, polyphosphorous acid and combinations thereof.
- 291. The concentrated phosphorus fertilizer according to claim 286, wherein said pH is less than about 1.5.
- 292. The concentrated phosphorus fertilizer according to claim 286, further comprising an organic acid.
- 293. The concentrated phosphorus fertilizer according to claim 292, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 294. The concentrated phosphorus fertilizer according to claim 292, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, malic, formic, oxaloacetic, cis-aconitic, isocitric and α-keto-glutaric acid.
- 295. The concentrated phosphorus fertilizer according to claim 292, wherein said organic acid is citric acid.
- 296. The concentrated phosphorus fertilizer according to claim 289, further comprising an organic acid.
- 297. The concentrated phosphorus fertilizer according to claim 296, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 298. The concentrated phosphorus fertilizer according to claim 297, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, 35 malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.
- 299. The concentrated phosphorus fertilizer according to claim 298, wherein said organic acid is citric acid.
- 300. The concentrated phosphorus fertilizer according to claim 286, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.
- 301. The concentrated phosphorus fertilizer according to claim 300, wherein said organic acid is a member selected ⁴⁵ from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 302. The concentrated phosphorus fertilizer according to claim 300, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, 50 malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.
- 303. The concentrated phosphorus fertilizer according to claim 300, wherein said organic acid is citric acid.
- 304. The concentrated phosphorus fertilizer according to claim 289, wherein said concentrated phosphorus fertilizer is prepared by a process comprising: mixing said base, said phosphorous source, and an organic acid, thereby forming said concentrated phosphorus fertilizer.
- 305. The concentrated phosphorus fertilizer according to claim 304, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid and a tricarboxylic acid.
- 306. The concentrated phosphorus fertilizer according to claim 304, wherein said organic acid is a member selected from the group consisting of pyruvic, succinic, fumaric, 65 malic, formic, oxaloacetic, cis-aconitic, isocitric and \alpha-keto-glutaric acid.

- 307. The concentrated phosphorus fertilizer according to claim 304, wherein said organic acid is citric acid.
- 308. A phosphorus fertilizer buffer concentrate comprising: (i) a salt of a phosphorous acid; and (ii) an organic acid, wherein said buffer concentrate is in a solid form.
- 309. The buffer concentrate according to claim 308, wherein phosphorus in said buffer concentrate is present in an amount equivalent to about 0.30 kg/L or greater P_2O_5 .
- 310. The buffer concentrate according to claim 308, wherein phosphorus in said buffer concentrate is present in an amount equivalent to from about 0.30 kg/L to about 0.40 kg/L P_2O_5 .
- 311. The buffer concentrate according to claim 308, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid and combinations thereof.
- 312. The buffer concentrate according to claim 311, wherein said organic acid is citric acid.
- 313. The buffer concentrate according to claim 308, wherein said organic acid is a vitamin acid.
 - 314. The buffer concentrate according to claim 313, wherein said vitamin acid is selected from the group consisting of ascorbic acid and folic acid.
 - 315. The buffer concentrate according to claim 308, further comprising a plant nutrient, wherein said plant nutrient is a member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.
 - 316. A phosphorus fertilizer buffer concentrate comprising a salt of a phosphorous acid and a salt of an organic acid, wherein said buffer concentrate is in a solid form.
 - 317. The buffer concentrate according to claim 316, wherein phosphorus in said buffer concentrate is present in an amount equivalent to about 0.30 kg/L or greater P_2O_5 .
 - 318. The buffer concentrate according to claim 316, wherein phosphorus in said buffer concentrate is present in an amount equivalent to from about 0.30 kg/L to about 0.40 kg/L P_2O_5 .
- 319. The buffer concentrate according to claim 316, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, and combinations thereof.
 - 320. The buffer concentrate according to claim 316, wherein said salt of an organic acid is citrate.
 - 321. The buffer concentrate according to claim 316, wherein said organic acid is a vitamin acid.
 - 322. The buffer concentrate according to claim 321, wherein said vitamin acid is selected from the group consisting of ascorbic acid and folic acid.
 - 323. A phosphorus fertilizer buffer concentrate comprising a dry blend mixture of: (i) a salt of a phosphorous acid; and (ii) an organic acid.
- 324. The buffer concentrate according to claim 323, wherein phosphorus in said buffer concentrate is present in an amount equivalent to about 0.30 kg/L or greater P_2O_5 .
 - 325. The buffer concentrate according to claim 323, wherein phosphorus in said buffer concentrate is present in an amount equivalent to from about 0.30 kg/L to about 0.40 kg/L P_2O_5 .
 - 326. The buffer concentrate according to claim 323, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid and combinations thereof.
 - 327. The buffer concentrate according to claim 326, wherein said organic acid is citric acid.
 - 328. The buffer concentrate according to claim 323, wherein said organic acid is a vitamin acid.

- 329. The buffer concentrate according to claim 328, wherein said vitamin acid is selected from the group consisting of ascorbic acid and folic acid.
- 330. The buffer concentrate according to claim 323, further comprising a plant nutrient, wherein said plant nutrient is a 5 member selected from the group consisting of nitrogen, potassium, sulfur, calcium, magnesium, boron, iron, manganese, molybdenum, zinc, ammonia and combinations thereof.

331. A phosphorus fertilizer buffer concentrate comprising a dry blend mixture of: (i) a salt of a phosphorous acid and (ii) 10 a salt of an organic acid.

- 332. The buffer concentrate according to claim 331, wherein phosphorus in said buffer concentrate is present in an amount equivalent to about 0.30 kg/L or greater P_2O_5 .
- 333. The buffer concentrate according to claim 331, wherein phosphorus in said buffer concentrate is present in an

amount equivalent to from about 0.30 kg/L to about 0.40 kg/L P_2O_5 .

- 334. The buffer concentrate according to claim 331, wherein said organic acid is a member selected from the group consisting of a dicarboxylic acid, a tricarboxylic acid, and combinations thereof.
- 335. The buffer concentrate according to claim 331, wherein said salt of an organic acid is citrate.
- 336. The buffer concentrate according to claim 331, wherein said organic acid is a vitamin acid.
- 337. The buffer concentrate according to claim 336, wherein said vitamin acid is selected from the group consisting of ascorbic acid and folic acid.
